Principal contributors to the development of the Suffolk County Comprehensive Water Resources Management Plan include:

**SUFFOLK COUNTY DEPARTMENT OF HEALTH SERVICES (SCDHS)**
James L. Tomarken, MD, MPH, MBA, MSW, Commissioner
Walter Dawydiak, PE, JD, Director of Environmental Quality

Alison Branco, PhD
Douglas Feldman, PE
Patricia Floria, PE
Walter Hilbert, PE
Kenneth Hill
Ronald Huttie
Michael Jensen
Christopher Lubicich, PE
James Meyers, PE
Vito Minei, PE
Kathleen Negri
Ron Paulsen
Joette Pavelka
Nancy Pierson
Paul Ponturo, PE
Andrew Rapiejko
Sy Robbins, PG
Geralynn Rosser
John Sohngen, PE
Larry Stipp
Martin Trent
Jonathan Wanlass
Mac Waters

**SUFFOLK COUNTY DEPARTMENT OF PUBLIC WORKS**
Gilbert Anderson, PE, Commissioner
John Donovan, PE
Benjamin Wright, PE
Boris Rukovets, PE

**SUFFOLK COUNTY DEPARTMENT OF ECONOMIC DEVELOPMENT AND PLANNING**
Joanne Minieri, Deputy County Executive and Commissioner
Sarah Lansdale, Director of Planning
Dorian Dale, Director of Sustainability and Chief Recovery Officer

DeWitt Davies, PhD
Lauretta Fischer
Daniel Galizio, AICP
Thomas Isles, AICP
Carl Lind
August Ruckdeschel
Ronald Verbarg

**SUFFOLK COUNTY WATER AUTHORITY**
Jeffrey Szabo, Chief Executive Officer

Steven Colabufo, PG
Kevin Durk
Carrie Meek Gallagher
Stephen Jones
Paul Kuzman
James Touchet

**CDM SMITH**
Kati Bell, PhD, PE, BCEE
John Boyer, PE, BCEE
Matthew Gamache, PE
Michael Labiak
Mark Maimone, PE, PhD
Daniel O'Rourke, PG
Rao Sankarmanchi, PE
Mary Anne Taylor, PE

Note: Contributors to 2010 Draft are italicized

Special acknowledgement is extended to Walter Dawydiak, Director of the SCDHS Division of Environmental Quality (DEQ), and Vito Minei, former SCDHS DEQ Director for their roles in managing the initiation and completion of the Plan and to Christina Capobianco, CPA, Deputy Commissioner SCDHS and Barry Paul, Deputy Commissioner SCDHS for their support. Also, the SCDHS is grateful for the outstanding service of the draft Plan's long-time Project Managers, Sy Robbins and Martin Trent, and the final Plan's Project Managers Jason Hime and Larry Stipp. Special thanks are offered to Alison Branco, Dorian Dale, DeWitt Davies, Lauretta Fischer and John Sohngen, who contributed new chapters to this final Plan and to Doug Feldman and Andrew Rapiejko for their vital contributions throughout the program.

**Executive Summary** .................................................................................................................. ES-1

**Section 1  Valuing Water** ............................................................................................................. 1-1
  1.1 The Value Proposition ............................................................................................................... 1-1
  1.2 Global Water Security & Scarcity ............................................................................................. 1-6
  1.3 Public Opinion/Outreach ......................................................................................................... 1-12
  1.4 Messaging: Scarcity and/or CARE ........................................................................................ 1-16
  1.5 The *Value* Proposition of Home Improvement ..................................................................... 1-19
  1.6 Confluence of Ecoinfluencers? ............................................................................................... 1-20
  1.7 Ecosystem Services Valuation & Externalities ................................................................. 1-23
  1.8 Living with Water-Learning & Earning .............................................................................. 1-28

**Section 2  Ways and Means to Address Water Quality** .............................................................. 2-1
  2.1 Infrastructure in the Age of Scarcity ..................................................................................... 2-2
    2.1.1 Conventional Financing ................................................................................................ 2-4
    2.1.2 Dedicated Funding Streams ........................................................................................ 2-10
    2.1.3 Niche Funding ............................................................................................................. 2-15
  2.2 Wastewater Management District—Extending Septic Upgrades to the Untreated 74% 2-16
    2.2.1 Current Suffolk County Construction Standards ...................................................... 2-17
    2.2.2 Use of Innovative/Alternative Systems in Massachusetts ........................................ 2-17
    2.2.3 Wastewater Management District .............................................................................. 2-19
    2.2.4 Responsible Management Entity (RME) ..................................................................... 2-19
  2.3 Operational Efficiencies: Synergies of Consolidation .......................................................... 2-27
  2.4 Comprehensive Water Resources Management ............................................................... 2-29
    2.4.1 Integration of Water Supply and Wastewater Management ...................................... 2-29
    2.4.2 Case in Point: Seeking Means beyond Grants .......................................................... 2-34

**IBM Smarter Cities Challenge Report** ...................................................................................... follows 2-38

**Section 3  Groundwater Resources** .......................................................................................... 3-1
  3.1 Problem Identification .......................................................................................................... 3-1
    3.1.1 Groundwater Quality .................................................................................................... 3-1
      3.1.1.1 Background ........................................................................................................ 3-1
      3.1.1.2 Contaminants of Concern ................................................................................. 3-3
      3.1.1.3 Nitrate .............................................................................................................. 3-4
      3.1.1.4 Volatile Organic Compounds ............................................................................ 3-45
      3.1.1.5 Pesticides ........................................................................................................ 3-69
      3.1.1.6 Other Contaminants of Potential Concern ...................................................... 3-85
      3.1.1.7 Summary ........................................................................................................ 3-100
    3.1.2 Groundwater Quantity ................................................................................................. 3-102
      3.1.2.1 Water Balances ............................................................................................. 3-102
      3.1.2.2 Main Body Water Balance ............................................................................ 3-103
      3.1.2.3 North Fork Water Balance ........................................................................... 3-108
      3.1.2.4 South Fork Water Balance .......................................................................... 3-110
Section 5

4.1.2.1 Non-Community Supply Limitations ................................................................. 4-5
4.1.2.2 Private Well Limitations .............................................................................. 4-5
4.1.2.3 Peak Water Supply Demands ......................................................................... 4-6
4.2 Drinking Water Supply Goals and Objectives ......................................................... 4-8
4.3 Recommendations to Address Drinking Water Supply ........................................ 4-10
4.3.1 Introduction ........................................................................................................ 4-10
4.3.2 Extension of Community Supplies ................................................................. 4-10
4.3.2.1 North Fork ..................................................................................................... 4-11
4.3.2.2 South Fork ..................................................................................................... 4-26
4.3.3 Additional Recommendations Pertaining to Private Wells ............................ 4-33
4.3.4 County-wide Peak Pumping Demands ............................................................. 4-34
4.3.4.1 Rain Sensor Shut-off Devices ...................................................................... 4-38
4.3.4.2 Conservation Program .................................................................................. 4-38
4.3.4.3 Seasonal Rate Structure .............................................................................. 4-40
4.3.4.4 Odd/Even Watering Restrictions ................................................................. 4-42
4.3.5 Supply and Pumpage Monitoring .................................................................... 4-42
4.4 Implementation ..................................................................................................... 4-47
4.4.1 Implementation Framework ............................................................................. 4-47
4.4.1.1 Extension of Community Water Supplies ..................................................... 4-47
4.4.1.2 Conservation ................................................................................................ 4-47
4.4.1.3 Monitoring, Data Management, Evaluation and Coordination .................. 4-49
4.4.2 Implementation Responsibilities ....................................................................... 4-52
4.4.3 Assessment Monitoring .................................................................................... 4-53

Section 5 Surface Water Resources ................................................................................. 5-1

5.1 Problem Identification .......................................................................................... 5-2
5.1.1 Fresh Surface Water Resources ..................................................................... 5-2
5.1.2 Coastal and Marine Resources ....................................................................... 5-19
5.1.2.1 Long Island Sound ...................................................................................... 5-32
5.1.2.2 Peconic Estuary ......................................................................................... 5-34
5.1.2.3 South Shore Estuary Reserve and Southern Coastal Waters .................... 5-37
5.1.3 Contaminants of Emerging Concern ............................................................... 5-38
5.1.4 Summary .......................................................................................................... 5-38
5.2 Goals and Objectives ......................................................................................... 5-38
5.3 Recommendations .............................................................................................. 5-42
5.3.1 Introduction ....................................................................................................... 5-42
5.3.2 New Development ............................................................................................ 5-42
5.3.2.1 Recommendation for Open Space Preservation ........................................... 5-42
5.3.2.2 Recommendations for New Developments ................................................. 5-49
5.3.3 Existing Developed Areas ............................................................................ 5-53
5.3.3.1 Recommendations to Evaluate Sanitary Wastewater Treatment and Disposal Options ........................................................................................................... 5-53
5.3.3.2 Recommendations with Respect to Nitrate Loads from Fertilization ...... 5-54
5.3.4 Recommendations to Address Volatile Organic Compound Contamination 5-58
5.7 Implementation

5.7.1 Implementation Framework .................................................................. 5-98
5.7.2 Implementation Responsibilities .......................................................... 5-99
5.7.3 Assessment Monitoring ..................................................................... 5-100

5.8 Stormwater Management Recommendations ........................................... 5-67

5.4 Establishment/Enhancement of Surface Water Monitoring Programs .......... 5-69
5.4.1 Beach Monitoring ............................................................................. 5-69
5.4.2 Estuary Program Monitoring .............................................................. 5-72
5.4.3 Stream and Pond Monitoring .............................................................. 5-72
5.4.4 Special Studies .................................................................................. 5-85
5.4.5 Data Management and Reporting ...................................................... 5-86

5.5 Public Outreach and Education .............................................................. 5-90

5.6 Summary of Recommendations ............................................................. 5-94

Section 6  Estuary Programs ......................................................................... 6-1

6.1 Introduction ............................................................................................ 6-1
6.2 The Peconic Estuary ............................................................................. 6-5
  6.2.1 Introduction ...................................................................................... 6-5
  6.2.2 Problem Identification .................................................................... 6-7
  6.2.3 Goals and Objectives ..................................................................... 6-8
    6.2.3.1 Existing Metrics ........................................................................ 6-11
  6.2.4 Recommendations .......................................................................... 6-12
    6.2.4.1 Nitrogen: “Public Enemy Number One” .................................... 6-12
  6.2.4.2 Nutrients .................................................................................... 6-13
    6.2.4.3 Harmful Algal Blooms (HABs) ................................................. 6-16
    6.2.4.4 Habitat and Living Resources ................................................. 6-16
  6.2.4.5 Pathogens ................................................................................. 6-18
  6.2.5 Implementation ................................................................................ 6-20
    6.2.5.1 Programmatic Mechanisms ..................................................... 6-20
    6.2.5.2 Funding Mechanisms .............................................................. 6-21
  6.2.6 Education and Outreach .................................................................. 6-23

6.3 Long Island Sound .................................................................................. 6-24
  6.3.1 Introduction ..................................................................................... 6-24
  6.3.2 Background and Problem Identification ......................................... 6-26
  6.3.3 Themes, Goals, Targets, Outcomes, Objectives and Strategies .......... 6-30
    6.3.3.1 Existing Metrics ........................................................................ 6-31
  6.3.4 Recommendations .......................................................................... 6-33
  6.3.5 Implementation ................................................................................ 6-34
  6.3.6 Education and Outreach .................................................................. 6-35

6.4 South Shore Estuary .............................................................................. 6-35

## Section 7  Coastal Resiliency ................................................................. 7-1

7.1 Coastal Facts ..................................................................................... 7-2
7.2 Coastal Vulnerability/Sea Level Rise .................................................. 7-3
7.3 Coastal Resiliency & Risk Management .............................................. 7-8
   - 7.3.1 Strategic Retreat / Staying Put .................................................. 7-9
   - 7.3.2 Fire Island to Montauk Point (FIMP) ........................................... 7-13
   - 7.3.3 Rebuild by Design .................................................................. 7-19
   - 7.3.4 New York Rising Community Reconstruction Program .............. 7-22
7.4 Wetland Stewardship Strategy .......................................................... 7-25
7.5 Drainage Strategies in Chronically Flooded Areas ............................... 7-30
7.6 Hard Defenses ................................................................................... 7-31

## Section 8  Wastewater Management ......................................................... 8-1

8.1 Problem Identification ....................................................................... 8-1
   - 8.1.1 The History of Wastewater Management in Suffolk County ............. 8-3
      + 8.1.1.1 Population Growth and Construction Trends ............................... 8-3
      + 8.1.1.2 Current Methods of Reducing/Limiting Wastewater Effluent Nitrogen Loading ................................................................. 8-6
      + 8.1.1.3 On-site Sewage Disposal Systems ............................................. 8-11
      + 8.1.1.4 Sewage Treatment Plants and Sewering .................................... 8-17
   - 8.1.2 Environmental Impacts due to Wastewater Effluent ...................... 8-24
      + 8.1.2.1 Status and Trends of Nitrogen in Suffolk County Groundwater .... 8-24
      + 8.1.2.2 Status and Trends of Wastewater Impacts to Suffolk County Surface Waters .............................................................. 8-27
      + 8.1.2.3 Impacts and Trends of Other Wastewater Effluent Constituents .... 8-29
   - 8.1.3 Contaminants of Emerging Concern (CEC) Treatability Considerations 8-35
      + 8.1.3.1 On-site Wastewater Treatment Systems ..................................... 8-36
      + 8.1.3.2 Conventional Wastewater Treatment Plants .............................. 8-48
      + 8.1.3.3 Sequencing Batch Reactors & Membrane Bioreactors ................ 8-59
      + 8.1.3.4 Advanced Treatment Options .................................................. 8-62
   - 8.1.4 Recommendations for Suffolk County: Planning for the Future ............. 8-64
      + 8.1.4.1 Design Parameters for OWTSs ................................................. 8-65
8.2 Goals and Objectives ........................................................................................................... 8-87
  8.2.1 Goals to Meet Water Quality Initiatives ........................................................................ 8-87
    8.2.1.1 Direct Wastewater Effluent Discharge Goals ...................................................... 8-87
    8.2.1.2 Indirect Goals Attributed to Direct Wastewater Effluent Discharge Goals ........ 8-87
  8.2.2 Objectives to Meet Water Quality Initiatives ................................................................. 8-88
    8.2.2.1 Wastewater Management Plan Implementation Timeline to Meet Goals ........... 8-88
    8.2.2.2 Sewering Objectives to Meet Wastewater Goals ................................................. 8-88
    8.2.2.3 On-Site Wastewater Treatment System Objectives to Meet Wastewater Goals ... 8-90
  8.2.3 Section Summary ........................................................................................................... 8-91
8.3 Recommendations ............................................................................................................... 8-92
  8.3.1 Establish Wastewater Nitrogen Load Targets for Sub-Watersheds and Public Water Supply Well to Maintain and Improve Water Quality ......................................................... 8-92
    8.3.1.1 Create a GIS Based Wastewater Treatment Map Defining Wastewater Treatment Options for Suffolk County Based On Established Nitrogen Load Targets ............................................................... 8-93
  8.3.2 Implement an On-Site Sanitary System Upgrade Program and Sewage Treatment Plant Upgrade Program ................................................................................................................................. 8-94
  8.3.3 Onsite Wastewater Treatment System Technologies ..................................................... 8-99
    8.3.3.1 Develop an Innovative/Alternative Onsite Wastewater Treatment System Program ........................................................................................................................................ 8-99
  8.3.4 Expanding and/or Creating New Sewer districts (Centralized or Decentralized) .... 8-116
    8.3.4.1 Bellport Feasibility Study ....................................................................................... 8-118
    8.3.4.2 Flanders Riverside Sewering Feasibility Study ...................................................... 8-119
    8.3.4.3 Mastic/Shirley Sewering Feasibility Study ............................................................ 8-120
    8.3.4.4 Sayville Feasibility Study ...................................................................................... 8-120
    8.3.4.5 Southampton Village Feasibility Study ................................................................. 8-121
    8.3.4.6 Deer Park, North Babylon, West Babylon, Wyandanch, Wheatley Heights, and West Islip Feasibility Study ............................................................................................................................... 8-121
  8.3.5 Improvements to Sewage Treatment Plant Technologies ............................................... 8-122
  8.3.6 Section Summary ........................................................................................................... 8-136
8.4 Implementation ....................................................................................................................... 8-137
  8.4.1 Responsibilities of Suffolk County .................................................................................... 8-137
    8.4.1.1 Study to Identify Priority Areas and Classify Wastewater Treatment Requirements for Each Area ........................................................................................................................................... 8-137
8.4.1.2 SCDHS Sanitary Code and Construction Standards ...........................................8-139
8.4.1.3 Creation and Functions of a Responsible Management Entity to Oversee Funding, Operation, and Maintenance of an I/A OWTS Program ..............................8-144
8.4.1.4 Permitting and Evaluation of Innovative/Alternative Onsite Wastewater Treatment Systems for Use in Suffolk County .................................................................8-146
8.4.1.5 Funding of Innovative/Alternative Onsite Wastewater Treatment Systems (I/A OWTS) ......................................................................................................................8-148
8.4.1.6 Decentralized Sewage Treatment Plant Systems ..............................................8-152
8.4.1.7 Public Sewer District Expansions and/or Creation in Identified Priority Areas (Centralized/Municipal) ..............................................................................................8-153
8.4.2 Responsible Management Entity ........................................................................8-158
8.4.3 Property Owners ..................................................................................................8-160
8.4.4 Contractors and Design Professionals ..................................................................8-161
8.4.5 Summary .............................................................................................................8-161
8.5 Section References ...................................................................................................8-163
