COUNTY OF SUFFOLK

STEVEN BELLONE
SUFFOLK COUNTY EXECUTIVE

DEPARTMENT OF ECONOMIC DEVELOPMENT AND PLANNING
DIVISION OF PLANNING AND ENVIRONMENT

COUNCIL ON ENVIRONMENTAL QUALITY

Gloria Russo
Chairperson
CEQ

NOTICE OF PUBLIC MEETING

Notice is hereby given that the Council on Environmental Quality will convene a regular public meeting at 9:30 a.m. on Wednesday, September 21, 2016 in the Arthur Kunz Library, H. Lee Dennison Building, Second Floor, Veterans Memorial Highway, Hauppauge, NY 11788. Pursuant to the Citizens Public Participation Act, all citizens are invited to submit testimony, either orally or in writing at the meeting. Written comments can also be submitted prior to the meeting to the attention of:

Andrew P. Freleng, Chief Planner
Council on Environmental Quality
Suffolk County Planning Department
P.O. Box 6100
Hauppauge, NY 11788
631-853-5191

Council of Environmental Quality
Gloria Russo, Chairperson
AGENDA

MEETING NOTIFICATION

Wednesday, September 21, 2016 9:30 a.m.
Arthur Kunz Library
H. Lee Dennison Bldg. – 2nd Floor
Veterans Memorial Highway, Hauppauge

All project materials can be found at:

http://www.suffolkcountyny.gov/Departments/Planning/Boards/CouncilonEnvironmentalQuality

Call to Order:

Minutes:
August 17, 2016

Correspondence:

Public Portion:

Historic Trust Docket:
Director’s Report:

Updates on Housing Program for Historic Trust Sites
Updates on Historic Trust Custodial Agreements
Project Review:
Recommended Type 1 Actions:

A. Proposed LT Michael P. Murphy Navy Seal Museum at Suffolk County’s West Sayville Golf Course Property, Town of Islip

B. Suffolk County Wastewater Management Program for the Mitigation of Nitrogen Impacts from Wastewater Sources

Project Review:
Recommended Unlisted Actions:

A. Proposed Acquisition of Land Under the New Suffolk County Drinking Water Protection Program – Open Space Component – North Fork Preserve Addition – for the Alan S. Gorman DDS, PC 401K Plan Property, Town of Riverhead

B. Proposed Ronkonkoma Hub Development Sanitary Pumping Station and Force Main Piping Systems, Town of Brookhaven, Town of Islip and Village of Islandia

C. Proposed Little Creek Stormwater Mitigation Project, Village of Patchogue

D. Proposed Clean Lakes Patchogue Project - Patchogue Lake Aerator Installation, Village of Patchogue

E. Proposed Lake Agawam Stormwater Remediation Phase IV Project, Village of Southampton

F. Proposed Meadow Road Stormwater Management Project, Town of Smithtown

Project Review:
Recommendations for LADS Report:

A. Recommendations for Legislative Resolutions Laid on the Table September 7, 2016

Other Business:

CAC Concerns:

*CAC MEMBERS: The above information has been forwarded to your local Legislators, Supervisors and DEC personnel. Please check with them prior to the meeting to see if they have any comments or concerns regarding these projects that they would like brought to the CEQ’s attention.

**CEQ MEMBERS: PLEASE NOTIFY THIS OFFICE AS SOON AS POSSIBLE IF YOU WILL BE UNABLE TO ATTEND.

***FOLLOWING THE MEETING PLEASE LEAVE BEHIND ALL PROJECT MATERIAL THAT YOU DO NOT WANT OR NEED AS WE CAN RECYCLE THESE MATERIALS LATER ON.
SUFFOLK COUNTY
COUNCIL ON ENVIRONMENTAL QUALITY
MINUTES

DATE: September 21, 2016
TIME: 9:40 am – 12:15 am
LOCATION: Arthur Kunz Library
H. Lee Dennison Bldg. – 2nd Floor
Veterans Memorial Highway, Hauppauge, New York

PRESENT:
Gloria Russo, Chair
Michael Kaufman, Vice Chair
Robert Carpenter Jr.
Frank De Rubeis
Michael Doall
Eva Growney
Hon. Kara Hahn
Mary Ann Spencer

ABSENT:
Thomas Gulbransen
Constance Kepert
Larry Swanson

CAC REPRESENTATIVES:
None

STAFF:
Andrew Freleng, Chief Planner
John Corral, Senior Planner
Christine DeSalvo, Senior Clerk Typist
Minutes:

Minutes for the August 17, 2016, CEQ minutes were reviewed and discussed.

A motion was made by Mr. Kaufman to approve the August 17, 2016 minutes as amended. The motion was seconded by Ms. Growney. Motion carried.
Correspondence:

A letter was received from Edward Romaine, Supervisor of the Town of Brookhaven, regarding the Ronkonkoma Hub Development Sanitary Pumping Station and Force Main Piping Systems, Town of Brookhaven, Town of Islip and Village of Islandia. This letter was discussed during the project review of the Ronkonkoma Hub Sanitary Pumping Station and Force Main Piping System.

Public Portion:

None

Historic Trust Docket:

Director’s Report:

Mr. Martin updated the Council on the following:

- Housing Program:
  Mr. Martin noted that there is nothing new to report on the housing program. Suffolk County Parks is continuing to work on the interior renovations at Blydenburgh Cottage in Blydenburgh County Park.

- Custodial Agreements:
  Mr. Martin noted that there are no new updates on the custodial agreements. It was discussed that the Parks Department continues to work on the pending custodial agreements and they are moving forward.

Mr. Martin also noted that Meadow Croft County Park, is available for the October 19, 2016 CEQ meeting. Chairwoman Russo confirmed that the CEQ will hold the October 19, 2016 meeting at the Meadow Croft Estate in Sayville.

Project Review:

Recommended Unlisted Actions: (Taken Out of Order)

B. Proposed Ronkonkoma Hub Development Sanitary Pumping Station and Force Main Piping Systems, Town of Brookhaven, Town of Islip and Village of Islandia

John Donovan, Chief Engineer, Suffolk County Department of Public Works, and Gil Anderson, Commissioner, Suffolk County Department of Public Works gave a presentation on the project. The proposed project involves the construction of a sanitary pumping station and a seven mile long force main and gravity line piping system to convey the generated wastewater from the Ronkonkoma Hub Transit Oriented Development project to the Southwest Sewer District No. 3 and ultimately to the existing Bergen Point Sewage Treatment System. The project is also being designed to allow for possible future connections to the proposed pumping station and force main piping system.
Mr. Donovan noted that this project was previously before the CEQ in January, 2015 when the project was stopped due to issues the Village of Islandia had with the project. Mr. Donovan noted that the issues the Village of Islandia had with the project have been resolved and that Suffolk County is going to enter into an Intermunicipal Agreement with the Village to satisfy the Village’s concerns and insure that the Village will not oppose the project. Mr. Donovan also noted that the project information submitted by the Suffolk County Department of Public Works includes information to address the questions raised by the CEQ at the January, 2015 meeting.

As part of its project review the CEQ discussed the following topics:

- Mr. Kaufman asked for clarification regarding how the force main will be constructed through the Connetquot River Headwaters area. It was discussed that to minimize impacts either a pipe jacking process or direction drilling process will be used where the force main crosses the Connetquot River headwaters. It was also discussed that all work will be done in the existing road right-of-way.

- Chairwoman Russo summarized a letter received by the CEQ dated September 20, 2016 from the Town of Brookhaven Supervisor Edward Romaine regarding the project. The letter stated that the Town of Brookhaven is concerned about pumping the wastewater for the Ronkonkoma Hub development to the Southwest Sewer District instead of the original plan to construct a Sewage Treatment Plant adjacent to the Ronkonkoma Hub Project. The letter also notes the Supervisor’s concern of groundwater being pumped out of the Magothy Aquifer and then being discharged as treated effluent to the ocean. Commissioner Anderson noted that the Suffolk County Department of Public Works has looked at the issue of replenishing groundwater and the issue of sending wastewater to the Bergen Point Sewage Treatment Plant. It was noted by Commissioner Anderson that there is a clay lens between the Upper Glacial Aquifer and the Magothy Aquifer. It was also noted that even at full buildout the 1.5 million gallons per day that will be pumped to the Bergen Point Sewage Treatment Plant still represents a very small percentage of water not being recharged back into the aquifer. Legislator Krupski also asked an additional question on the issue of groundwater recharge and overdrafting and whether the issue has been considered for this project. It was noted that the Suffolk County Department of Public Works spoke with Joe Pokorny the chief engineer for Suffolk County Water Authority which services the project area. Mr. Pokorny informed the Suffolk County Department of Public Works that he did not believe the amount of water being removed from the aquifer would have an impact on the Suffolk County Water Authority water supply wells. This was based on the magnitude of the wastewater flow being pumped to the Bergen Point Sewage Treatment Plant in comparison to the magnitude of a
Suffolk County Water Authority pumping well.

- The possibility of additional connections to the line was also discussed. It was noted that it will be possible for connections to occur along the line including in the Village of Islandia but there are no specific identified connections at this time. It was also noted that Suffolk County is working on the planning stages to consider connecting the McArthur Airport Industrial Park to the sewer line. Legislator Hahn noted that the possibility of other communities connecting to the proposed sewer line would result in the project having added environmental benefit.

- The CEQ also noted that there should be a few edits made to the EAF and that Mr. Kaufman would work with the staff to make these edits prior to the Legislature reviewing the EAF and making its SEQRA determination for this project.

- The Village Attorney, Mr. Prokop said that he would like to thank the County in their efforts in developing the IMA between the County and the Village but noted that the IMA has not yet been finalized. Mr. Prokop also asked that the Village’s original comments be taken into account when edits are made to the project EAF.

- The CEQ noted that while at this time the CEQ is reviewing this sewer connection project it is important that as Suffolk County considers future projects that the County have an overall long term strategy for sewering and wastewater treatment.

After the extended discussion a motion was made by Mr. Kaufman to recommend classification of the proposed project as an Unlisted Action with a Negative Declaration. The motion was seconded by Ms. Growney. Motion carried.

**Project Review:**

**Recommended Type 1 Actions:**

**A. Proposed LT Michael P. Murphy Navy Seal Museum at Suffolk County’s West Sayville Golf Course Property, Town of Islip**

Richard Martin, Director of Historic Services, Suffolk County Department of Parks, Recreation and Conservation, Dan Murphy, Father of LT Michael Murphy and Paul Dobiecki, Architect for the Navy Seal Museum gave a presentation on the project. The project involves construction of a new one story 10,500 square feet structure and a connected 70 foot tall tower to be located in a cleared area of the pinetum (pine tree area) at Suffolk County’s West Sayville Golf Course Property. The proposed structure will be used for a Navy Seal Museum as well as for a Navy Sea Cadet Corps Training Facility. The project also includes a new egress driveway to West Avenue, a new walkway with display areas and new vegetative plantings.

After discussion a motion was made by Mr. Kaufman to recommend classification of the proposed project as a Type 1 Action with a Negative Declaration. The
motion included that no ancillary equipment will be placed on the proposed museum tower. The motion was seconded by Legislator Hahn. Motion carried.

It was discussed that the CEQ as the Historic Trust also needed to do a separate resolution for the Suffolk County Historic Trust approval of the proposed LT Michael Murphy Navy Seal Museum at Suffolk County’s West Sayville Golf Course Property.

A motion was made by Mr. Kaufman to approve the proposed LT Michael Murphy Navy Seal Museum at Suffolk County’s West Sayville Golf Course with the provision that the applicant will continue to work with the Suffolk County Parks Department and the Suffolk County Historic Trust Committee on new landscaping and on the final design of the museum building. The motion was seconded by Hon. Hahn. Motion carried. Ms. Spencer abstained.

B. Suffolk County Wastewater Management Program for the Mitigation of Nitrogen Impacts from Wastewater Sources

Kenneth Zegel, Associate Public Health Engineer, Suffolk County Department of Health Services gave a presentation on the proposed project. The proposed project is for the approval and implementation of a County-wide wastewater program to mitigate nitrogen impacts emanating from wastewater sources. Mr. Zegel noted that the Suffolk County Department of Health Services plans to work with the CEQ and Legislature to complete a Generic Environmental Impact Statement (GEIS) for this project. It was also noted that the GEIS will include a public scoping session.

After discussion a motion was made by Mr. Kaufman to recommend classification of the proposed project as a Type 1 Action with a Positive Declaration. The motion was seconded by Ms. Growney. Motion carried.

Project Review:
Recommended Unlisted Actions:

C. Proposed Little Creek Stormwater Mitigation Project, Village of Patchogue

Frank Castelli, Environmental Projects Coordinator, Suffolk County Department of Economic Development and Planning and Joseph Dean, Superintendent of Public Works, Village of Patchogue gave a presentation of the proposed project. The proposed project involves the reconstruction of the drainage system at the south end of Little Creek to improve drainage capacity. This reconstruction involves the removal and replacement of a check valve vault and three 30” inch pipes with three new pipes to be anchored to the bay bottom. To facilitate collection and removal of debris a new headwall is also proposed to be constructed approximately 50 feet to the north of the bulkhead.
After discussion a motion was made by Mr. Kaufman to recommend classification of the proposed project as an Unlisted Action with a Negative Declaration. The motion was seconded by Ms. Growney. Motion carried.

D. Proposed Clean Lakes Patchogue Project - Patchogue Lake Aerator Installation, Village of Patchogue

Frank Castelli, Environmental Projects Coordinator, Suffolk County Department of Economic Development and Planning gave a presentation regarding the project. The proposed project involves the installation of four aerators in Patchogue Lake for the purpose of increasing the water current to oxygenate, aerate and improve the overall water quality of the Lake.

After discussion a motion was made by Mr. Kaufman to recommend classification of the proposed project as an Unlisted Action with a Negative Declaration. The motion was seconded by Ms. Growney. Motion carried.

E. Proposed Lake Agawam Stormwater Remediation Phase IV Project, Village of Southampton

Frank Castelli, Environmental Projects Coordinator, Suffolk County Department of Economic Development and Planning, and Lara Urbat with Nelson Pope & Voorhis gave a presentation on the proposed project. The proposed project involves the installation of a series of leaching pools along Culver Street and Ox Pasture Road in the Village of Southampton to reduce stormwater runoff to Lake Agawam. The drainage systems are proposed to be installed within the road right-of-ways and would not result in a change to impervious cover.

After discussion a motion was made by Mr. Kaufman to recommend classification of the proposed project as an Unlisted Action with a Negative Declaration. The motion was seconded by Ms. Growney. Motion carried.

F. Proposed Meadow Road Stormwater Management Project, Town of Smithtown

Frank Castelli, Environmental Projects Coordinator, Suffolk County Department of Economic Development and Planning and Allyson Murray, Environmental Planner, Town of Smithtown gave a presentation on the proposed project. The proposed project involves the construction of a bio-swale along Meadow Road to facilitate stormwater management of inputs to Mill Pond, the Nissequogue River and the Long Island Sound.

After discussion a motion was made by Mr. Kaufman to recommend classification of the proposed project as an Unlisted Action with a Negative Declaration. The motion was seconded by Ms. Growney. Motion carried.
A. Proposed Acquisition of Land Under the New Suffolk County Drinking Water Protection Program – Open Space Component – North Fork Preserve Addition – for the Alan S. Gorman DDS, PC 401K Plan Property, Town of Riverhead

Lauretta Fischer, Chief Environmental Analyst, Suffolk County Department of Economic Development and Planning gave a presentation on the proposed project. The project involves the acquisition of 5.591+ acres of land by Suffolk County under the New Suffolk County Drinking Water Protection Program and its dedication to the Suffolk County Parks Department in order to assure it remain in open space for passive recreational use.

After discussion a motion was made by Ms. Growney to recommend classification of the proposed project as an Unlisted Action with a Negative Declaration. The motion was seconded by Ms. Russo. Motion carried.

Project Review:

Recommendations for LADS Report:

Recommendations for Legislative Resolutions Laid on the Table September 7, 2016.

Mr. Corral noted that the staff’s SEQRA recommendations are listed on the September 7, 2016 LADS reports.

Mr. Kaufman made a motion to accept staff recommendations for the September 7, 2016 Legislative Resolutions. The motion was seconded by Ms. Growney. Motion carried.

Other Business:

Ms. Russo, Chair of the CEQ, welcomed and introduced the two newest CEQ Members Frank De Rubeis and Michael Doall.

CAC Concerns:

None

Meeting Adjourned
TO: Gloria Russo, Chairperson  
Council on Environmental Quality  

FROM: Ben Wright, P.E., Principal Civil Engineer  

SUBJECT: Ronkonkoma Hub Sewerage Facilities  

DATE: September 7, 2016  

During January 2015, the referenced project was discussed at the CEQ meeting. The sewerage facilities for the Ronkonkoma Hub included a pumping station and force mains from that project through the rights-of-way of the Towns of Brookhaven and Islip and the Village of Islandia. The ultimate disposal for treatment is Suffolk County Sewer District No. 3 - Southwest. The meeting resulted in issues concerning lead agency and concerns of the Village of Islandia regarding the force main route and construction activities. In order to respond to the various issues raised at that meeting including comments from the CEQ, it is noted that an intermunicipal agreement has been approved by the Board of Trustees of the Village of Islandia and that through the various conditions of the IMA, the Village is comfortable with the design, construction, operation, and operational aspects of the system specifically through the Village of Islandia. At the January 2015 meeting, the CEQ also requested some additional information/documentation which is provided in the enclosed attachments.

Based on the comments previously received and with the assistance of the CEQ staff in most of the attachments, we are providing 15 copies of the amended documents in response to comments for consideration at your upcoming CEQ meeting during September 2016:

1. The Ronkonkoma Hub Parts 1 and 2 which were the basis of the January 2015 meeting noting that attachment ‘H’ is an addendum to Part 1.
2. Updated Part 3 including the following:
   (a) Attachment ‘A’ which is the NYSDEC Commissioner’s lead agency finding.
   (b) Attachment ‘B’ Part III responses for all EAF Part 2 questions in which the impact was identified as potentially moderate to large.
(c) Attachment ‘C’ the Town of Brookhaven Ronkonkoma Hub SEQRA documents.

(d) Attachment ‘D’ Suffolk County 2010 SEQRA determination for 10 million gallons per day expansion of Suffolk County Sewer District No 3 – Southwest, Bergen Point Wastewater Treatment Plant.

(e) Attachment ‘E’ information regarding Bergen Point Treatment plant’s available flow capacity.

(f) Attachment “F” information regarding the proposed usage of the proposed sewer line connecting Ronkonkoma Hub to Sewer District No. 3 – Southwest.

(g) Attachment ‘G’ information regarding the passage of the sewer line within the roadway of Johnson Avenue in the Village of Islandia through the Connetquot River headwaters.

Thank you for your consideration.

Instructions for Completing Part 1

Part 1 is to be completed by the applicant or project sponsor. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification.

Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information; indicate whether missing information does not exist, or is not reasonably available to the sponsor; and, when possible, generally describe work or studies which would be necessary to update or fully develop that information.

Applicants/sponsors must complete all items in Sections A & B. In Sections C, D & E, most items contain an initial question that must be answered either “Yes” or “No”. If the answer to the initial question is “Yes”, complete the sub-questions that follow. If the answer to the initial question is “No”, proceed to the next question. Section F allows the project sponsor to identify and attach any additional information. Section G requires the name and signature of the project sponsor to verify that the information contained in Part 1 is accurate and complete.

A. Project and Sponsor Information.

<td>Project Location (describe, and attach a general location map):</td>
<td>Sanitary Pump Station to be located at the corner of Mill Road and Railroad Avenue, Ronkonkoma, NY. Force main routing shown in Appendix 1.</td>
</tr>
<tr>
<td>Brief Description of Proposed Action (include purpose or need):</td>
<td>The Town of Brookhaven is developing approximately 58 acres of mixed-use residential and commercial space. It has been determined that the new development will generate a volume of wastewater in excess of that permitted by the Suffolk County Sanitary Code (Article 6). In order to address the sanitary density, the development will include a means by which wastewater generated by the development can be properly treated and disposed. The method chosen for treatment and disposal includes construction of a sanitary pumping station and force main piping systems to convey the generated wastewater to the Southwest Sewer District No. 3 and ultimately to the existing Bergen Point Wastewater Treatment Plant located in West Babylon, NY for proper treatment and disposal. Wastewater generated from the proposed Ronkonkoma Hub Development will be collected and conveyed to the proposed sanitary pumping station by a gravity sewer collection system.</td>

C. Planning and Zoning

C.1. Planning and zoning actions.

Will administrative or legislative adoption, or amendment of a plan, local law, ordinance, rule or regulation be the only approval(s) which must be granted to enable the proposed action to proceed? ☑ Yes ☐ No

- If Yes, complete sections C, F and G.
- If No, proceed to question C.2 and complete all remaining sections and questions in Part I

C.2. Adopted land use plans.

a. Do any municipally-adopted (city, town, village or county) comprehensive land use plan(s) include the site where the proposed action would be located?

If Yes, does the comprehensive plan include specific recommendations for the site where the proposed action would be located? ☐ Yes ☐ No

b. Is the site of the proposed action within any local or regional special planning district (for example: Greenway Brownfield Opportunity Area (BOA); designated State or Federal heritage area; watershed management plan; or other?)

If Yes, identify the plan(s):

__________________________________________________________________________
__________________________________________________________________________

(continued on next page)

Page 2 of 13

C.3. Other governmental actions.

There are no other governmental actions required for this project.

(continues on next page)
C.3. Zoning

a. Is the site of the proposed action located in a municipality with an adopted zoning law or ordinance. YES NO
If Yes, what is the zoning classification(s) including any applicable overlay district?
Site is zone industrial

b. Is the use permitted or allowed by a special or conditional use permit? YES NO

c. Is a zoning change requested as part of the proposed action? YES NO
If Yes,

i. What is the proposed new zoning for the site?

C.4. Existing community services.

a. In what school district is the project site located?
Sanlta~ PurnJ;~ Station: Sachem School District
Force Main Piping System: Sachem, Connetquot, Islandia & Central Islip School Districts

b. What police or other public protection forces serve the project site?
Suffolk Q:QU D Pollee Q: Q: Q: Qu Department, Town of Brookhaven Public Safety and Town of Islip Public Safety

c. Which fire protection and emergency medical services serve the project site?
Lakeland, Central Islip, Hauppauge and Brentwood Fire Departments, Stony Brook Hospital, Brookhaven Memorial Hospital, Peosort Health

d. What parks serve the project site?
None.

D. Project Details

D.1. Proposed and Potential Development

a. What is the general nature of the proposed action (e.g., residential, industrial, commercial, recreational; if mixed, include all components)?
Industrial/commercial

b. a. Total acreage of the site of the proposed action? 0.26 acres
b. Total acreage to be physically disturbed? 0.28 acres
c. Total acreage (project site and any contiguous properties) owned or controlled by the applicant or project sponsor? 0 acres

c. Is the proposed action an expansion of an existing project or use? YES NO
i. If Yes, what is the approximate percentage of the proposed expansion and identify the units (e.g., acres, miles, housing units, square feet)? % Units:

d. Is the proposed action a subdivision, or does it include a subdivision? YES NO
If Yes,

i. Purpose or type of subdivision? (e.g., residential, industrial, commercial; if mixed, specify types)

ii. Is a cluster/conservation layout proposed? YES NO

iii. Number of lots proposed?

iv. Minimum and maximum proposed lot sizes? Minimum Maximum

c. Will proposed action be constructed in multiple phases? YES NO

i. If No, anticipated period of construction: 24 months

ii. If Yes:

• Total number of phases anticipated
• Anticipated commencement date of phase 1 (including demolition) _____ month _____ year
• Anticipated completion date of final phase _____ month _____ year
• Generally describe connections or relationships among phases, including any contingencies where progress of one phase may determine timing or duration of future phases:
f. Does project include new residential uses? ☐ Yes ☐ No

<table>
<thead>
<tr>
<th>Initial Phase</th>
<th>Two Family</th>
<th>Three Family</th>
<th>Multiple Family (four or more)</th>

</tr>
<tr>
<td>At completion</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>of all phases</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

g. Does the proposed action include new non-residential construction (including expansions)? ☐ Yes ☐ No

h. Does the proposed action include construction or other activities that will result in the impoundment of any liquids, such as creation of a water supply, reservoir, pond, lake, waste lagoon or other storage? ☐ Yes ☐ No

D.2. Project Operations

a. Does the proposed action include any excavation, mining, or dredging, during construction, operations, or both? ☐ Yes ☐ No

(Not including general site preparation, grading or installation of utilities or foundations where all excavated materials will remain onsite)

If Yes:

i. What is the purpose of the excavation or dredging? excavation for construction of sanitary pumping station and force main piping systems

ii. How much material (including rock, earth, sediments, etc.) is proposed to be removed from the site?
   - Volume (specify tons or cubic yards): approx. 1,500 cy for construction of the pump station
   - Over what duration of time? approximately 24 months

iii. Describe nature and characteristics of materials to be excavated or dredged, and plans to use, manage or dispose of them.
   - Existing site soils to be excavated and disposed of site for construction of the sanitary pumping station and ancillary equipment vault.
   - Existing site soils to be excavated and reused as backfill for construction of the force main piping systems.

iv. Will there be onsite dewatering or processing of excavated materials? ☐ Yes ☐ No

If Yes, describe.

v. What is the total area to be dredged or excavated? 9 acres

vi. What is the maximum area to be worked at any one time? 0.26 acres

vii. What would be the maximum depth of excavation or dredging? 25 feet

viii. Will the excavation require blasting? ☐ Yes ☐ No

ix. Summarize site reclamation goals and plan:

Existing soils excavated for construction of the new sanitary pumping station and ancillary equipment vault will be disposed of site. Suitable existing soils excavated for the new force main piping systems will be reused as backfill material. Total area to be excavated (i.e., approx. 9 acres) includes sanitary pumping station site (0.5 acres) and approx. 7 miles of force main piping x 10' wide trench (8.5 acres).

b. Would the proposed action cause or result in alteration of, increase or decrease in size of, or encroachment into any existing wetland, waterbody, shoreline, beach or adjacent area? ☐ Yes ☐ No

If Yes:

i. Identify the wetland or waterbody which would be affected (by name, water index number, wetland map number or geographic description):
ii. Describe how the proposed action would affect that waterbody or wetland, e.g. excavation, fill, placement of structures, or alteration of channels, banks and shorelines. Indicate extent of activities, alterations and additions in square feet or acres:

<table>
<thead>
<tr>
<th>Description</th>
<th>Square Feet</th>
<th>Acres</th>
</tr>

iii. Will proposed action cause or result in disturbance to bottom sediments?  
If Yes, describe:

<table>
<thead>
<tr>
<th>Description</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

iv. Will proposed action cause or result in the destruction or removal of aquatic vegetation?  
If Yes:

<table>
<thead>
<tr>
<th>Description</th>
<th>Yes</th>
<th>No</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>

</tbody>
</table>
• Do existing sewer lines serve the project site? □ Yes [ ] No
• Will line extension within an existing district be necessary to serve the project? □ Yes [ ] No
  If Yes:
  • Describe extensions or capacity expansions proposed to serve this project:
    An approximate 7 mile force main piping system will be constructed to convey wastewater from the project site to the existing Southwest Sewer District No. 3 gravity sewer system and, ultimately to the existing Bergen Point Wastewater Treatment Plant.

iv. Will a new wastewater (sewage) treatment district be formed to serve the project site? □ Yes [ ] No
   If Yes:
   • Applicant/sponsor for new district: Suffolk County
   • Date application submitted or anticipated: To be determined
   • What is the receiving water for the wastewater discharge? Atlantic Ocean following proper treatment at the Bergen Point WWTP

v. If public facilities will not be used, describe plans to provide wastewater treatment for the project, including specifying proposed receiving water (name and classification if surface discharge, or describe subsurface disposal plans):
   Not applicable - an existing public facility (Bergen Point WWTP) will be utilized to provide wastewater treatment for the project.

vi. Describe any plans or designs to capture, recycle or reuse liquid waste:
   Not applicable.

   e. Will the proposed action disturb more than one acre and create stormwater runoff, either from new point sources (i.e. ditches, pipes, swales, curbs, gutters or other concentrated flows of stormwater) or non-point source (i.e. sheet flow) during construction or post construction? □ Yes [ ] No
   If Yes:
   i. How much impervious surface will the project create in relation to total size of project parcel?
      Square feet or 0.22 acres (impervious surface)
      Square feet or 0.26 acres (parcel size)
   ii. Describe types of new point sources. Stormwater runoff will be from the new sanitary pumping station building, parking areas and site roadways will utilize stormwater leaching pools.
   iii. Where will the stormwater runoff be directed (i.e. on-site stormwater management facility/structures, adjacent properties, groundwater, on-site surface water or off-site surface waters)?
      Stormwater runoff from the new sanitary pumping station will be directed to on-site stormwater leaching pools, which will discharge to groundwater. Parking areas and site roadways will utilize stormwater leaching pools.
      • If to surface waters, identify receiving water bodies or wetlands:
      • Will stormwater runoff flow to adjacent properties? □ Yes [ ] No
   iv. Does proposed plan minimize impervious surfaces, use pervious materials or collect and re-use stormwater? □ Yes [ ] No
   f. Does the proposed action include, or will it use on-site, one or more sources of air emissions, including fuel combustion, waste incineration, or other processes or operations? □ Yes [ ] No
   If Yes, identify:
   i. Mobile sources during project operations (e.g., heavy equipment, fleet or delivery vehicles)
      Equipment for construction of the new sanitary pumping station & force main piping system will be utilized (i.e., excavator, backhoe, etc.)
   ii. Stationary sources during construction (e.g., power generation, structural heating, batch plant, crushers)
      Not applicable.
   iii. Stationary sources during operations (e.g., process emissions, large boilers, electric generation)
      A new emergency/standby generator will be provided to maintain sanitary pumping station operations, as required, during a power outage.

g. Will any air emission sources named in D.2.f (above), require a NY State Air Registration, Air Facility Permit, or Federal Clean Air Act Title IV or Title V Permit? □ Yes [ ] No
   If Yes:
   i. Is the project site located in an Air quality non-attainment area? (Area routinely or periodically fails to meet ambient air quality standards for all or some parts of the year) □ Yes [ ] No
   ii. In addition to emissions as calculated in the application, the project will generate:
      • Tons/year (short tons) of Carbon Dioxide (CO₂)
      • Tons/year (short tons) of Nitrous Oxide (N₂O)
      • Tons/year (short tons) of Perfluorocarbons (PFCs)
      • Tons/year (short tons) of Sulfur Hexafluoride (SF₆)
      • Tons/year (short tons) of Carbon Dioxide equivalent of Hydrofluorocarbons (HFCs)
      • Tons/year (short tons) of Hazardous Air Pollutants (HAPs)
h. Will the proposed action generate or emit methane (including, but not limited to, sewage treatment plants, landfills, composting facilities)?

If Yes:
  i. Estimate methane generation in tons/year (metric):

ii. Describe any methane capture, control or elimination measures included in project design (e.g., combustion to generate heat or electricity):

i. Will the proposed action result in the release of air pollutants from open-air operations or processes, such as quarry or landfill operations?

If Yes: Describe operations and nature of emissions (e.g., diesel exhaust, rock particulates/dust):

j. Will the proposed action result in a substantial increase in traffic above present levels or generate substantial new demand for transportation facilities or services?

If Yes:
  i. When is the peak traffic expected (Check all that apply): ☐ Morning ☐ Evening ☐ Weekend ☐ Randomly between hours of to

ii. For commercial activities only, projected number of semi-trailer truck trips/day:

iii. Parking spaces: Existing Proposed Net increase/decrease

iv. Does the proposed action include any shared use parking?

v. If the proposed action includes any modification of existing roads, creation of new roads or change in existing access, describe:

vi. Are public/private transportation service(s) or facilities available within ½ mile of the proposed site?

vii. Will the proposed action include access to public transportation or accommodations for use of hybrid, electric or other alternative fueled vehicles?

viii. Will the proposed action include plans for pedestrian or bicycle accommodations for connections to existing pedestrian or bicycle routes?

k. Will the proposed action (for commercial or industrial projects only) generate new or additional demand for energy?

If Yes:
  i. Estimate annual electricity demand during operation of the proposed action:

Assumes two (2) pumps, misc. motors, heating, ventilation, lighting, etc. operating 12 hrs./day = 3,680 kW-hrs./day

ii. Anticipated sources_suppliers of electricity for the project (e.g., on-site combustion, on-site renewable, via grid/local utility, or other):

Local utilities, including PSE&G of Long Island and National Grid will provide electricity and natural gas, respectively, for the Project.

iii. Will the proposed action require a new, or an upgrade to, an existing substation?

l. Hours of operation. Answer all items which apply.

  i. During Construction:

  - Monday - Friday: 7:00 am to 4:00 pm
  - Saturday: not applicable
  - Sunday: not applicable
  - Holidays: not applicable

  ii. During Operations:

  - Monday - Friday: 24 hrs./day, 365 days/year
  - Saturday: 24 hrs./day, 365 days/year
  - Sunday: 24 hrs./day, 365 days/year
  - Holidays: 24 hrs./day, 365 days/year
m. Will the proposed action produce noise that will exceed existing ambient noise levels during construction, operation, or both?  
Yes  No

If yes:

i. Provide details including sources, time of day and duration:
Existing ambient noise levels may be exceeded during construction as a result of heavy equipment utilized to construct the new sanitary pumping station and force main piping systems. Existing ambient noise levels will not be exceeded during operation of the new sanitary pumping station.

ii. Will proposed action remove existing natural barriers that could act as a noise barrier or screen?  
Yes  No

Describe: Additional landscaping features will be provided at the new sanitary pumping station that could act as noise barriers.

n. Will the proposed action have outdoor lighting?  
Yes  No

If yes:

i. Describe source(s), location(s), height of fixture(s), direction/aim, and proximity to nearest occupied structures:
New sanitary pumping station will be provided with exterior area lighting for security purposes. All exterior lighting will incorporate LED lighting (for energy efficiency) and "dark skies" lighting technology.

ii. Will proposed action remove existing natural barriers that could act as a light barrier or screen?  
Yes  No

Describe: Additional landscaping features will be provided at the new sanitary pumping station that could act as light barriers.

o. Does the proposed action have the potential to produce odors for more than one hour per day?  
Yes  No

If Yes, describe possible sources, potential frequency and duration of odor emissions, and proximity to nearest occupied structures:
New sanitary pumping station will be housed indoors. In addition, the facility may be equipped with odor control systems to further reduce the potential for odors.

p. Will the proposed action include any bulk storage of petroleum (combined capacity of over 1,100 gallons) or chemical products 185 gallons in above ground storage or any amount in underground storage?  
Yes  No

If Yes:

i. Product(s) to be stored Diesel fuel for the emergency standby generator, if required. Potassium permanganate for odor control, if required.

ii. Volume(s) TBD per unit time TBD (e.g., month, year)

iii. Generally describe proposed storage facilities:
If natural gas is unavailable, diesel fuel will be required for the emergency standby generator. Bordoide may be required for odor control.

q. Will the proposed action (commercial, industrial and recreational projects only) use pesticides (i.e., herbicides, insecticides) during construction or operation?  
Yes  No

If Yes:

i. Describe proposed treatment(s):

ii. Will the proposed action use Integrated Pest Management Practices?  
Yes  No

r. Will the proposed action (commercial or industrial projects only) involve or require the management or disposal of solid waste (excluding hazardous materials)?  
Yes  No

If Yes:

i. Describe any solid waste(s) to be generated during construction or operation of the facility:
• Construction: TBD tons per 24 month (unit of time)
• Operation: TBD tons per month (unit of time)

ii. Describe any proposals for on-site minimization, recycling or reuse of materials to avoid disposal as solid waste:
• Construction: Suitable excavated materials for the force main piping system will be reused for backfill material.

• Operation: Not applicable.

iii. Proposed disposal methods/facilities for solid waste generated on-site:
• Construction: Excavated material for new sanitary pumping station will be properly transported and disposed of at an existing and permitted off-site disposal facility.

• Operation: Solid waste (i.e., grit and screenings) will be legally transported and disposed of at an existing and permitted off-site solid waste disposal facility.
s. Does the proposed action include construction or modification of a solid waste management facility? □ Yes ☑ No
If Yes:
   i. Type of management or handling of waste proposed for the site (e.g., recycling or transfer station, composting, landfill, or other disposal activities):
   
   ii. Anticipated rate of disposal/processing:
       • Tons/month, if transfer or other non-combustion/thermal treatment, or
       • Tons/hour, if combustion or thermal treatment
   
   iii. If landfill, anticipated site life: _______ years

   t. Will proposed action at the site involve the commercial generation, treatment, storage, or disposal of hazardous waste? □ Yes ☑ No
   
   If Yes:
       i. Name(s) of all hazardous wastes or constituents to be generated, handled or managed at facility:
       
   ii. Generally describe processes or activities involving hazardous wastes or constituents:
       
   iii. Specify amount to be handled or generated ______ tons/month
   
   iv. Describe any proposals for on-site minimization, recycling or reuse of hazardous constituents:

   v. Will any hazardous wastes be disposed at an existing offsite hazardous waste facility? □ Yes ☑ No
   
   If Yes: provide name and location of facility:

   If No: describe proposed management of any hazardous wastes which will not be sent to a hazardous waste facility:
       Hazardous waste will not be generated by the proposed action.

E. Site and Setting of Proposed Action

E.1. Land uses on and surrounding the project site

a. Existing land uses.
   
   i. Check all uses that occur on, adjoining and near the project site.
   
   □ Urban ☑ Industrial ☑ Commercial ☑ Residential (suburban) □ Rural (non-farm)
   
   □ Forest □ Agriculture □ Aquatic ☑ Other (specify): transportation (Long Island Railroad)

   ii. If mix of uses, generally describe:
       North = commercial/industrial; South = transportation (LIRR and airport); East = residential; West = commercial/industrial

b. Land uses and covertypes on the project site.

c. Is the project site presently used by members of the community for public recreation? ☐ Yes ☒ No

If Yes: explain:

d. Are there any facilities serving children, the elderly, people with disabilities (e.g., schools, hospitals, licensed day care centers, or group homes) within 1,500 feet of the project site? ☒ Yes ☐ No

i. Identify Facilities:
   Day Care Center - Tutor Time in Ronkonkoma, NY

e. Does the project site contain an existing dam? ☐ Yes ☒ No

If Yes:

i. Dimensions of the dam and impoundment:
   • Dam height: ____________________ feet
   • Dam length: ____________________ feet
   • Surface area: ____________________ acres
   • Volume impounded: ____________________ gallons OR acre-feet

ii. Dam's existing hazard classification:

iii. Date and summarize results of last inspection:

f. Has the project site ever been used as a municipal, commercial, or industrial solid waste management facility, or does the project site adjoin property which is now, or was at one time, used as a solid waste management facility? ☐ Yes ☒ No

If Yes:

i. Has the facility been formally closed? ☐ Yes ☒ No
   • If yes, cite sources/documentation:

ii. Describe the location of the project site relative to the boundaries of the solid waste management facility:

iii. Describe any development constraints due to the prior solid waste activities:

g. Have hazardous wastes been generated, treated and/or disposed of at the site, or does the project site adjoin property which is now or was at one time used to commercially treat, store and/or dispose of hazardous waste? ☐ Yes ☒ No

If Yes:

i. Describe waste(s) handled and waste management activities, including approximate time when activities occurred:

h. Potential contamination history. Has there been a reported spill at the proposed project site, or have any remedial actions been conducted at or adjacent to the proposed site? ☐ Yes ☒ No

If Yes:

i. Is any portion of the site listed on the NYSDEC Spills Incidents database or Environmental Site Remediation database? ☐ Yes ☒ No
   • Provide DEC ID number(s):
   □ Yes - Spills Incidents database
   □ Yes - Environmental Site Remediation database
   □ Neither database

ii. If site has been subject of RCRA corrective activities, describe control measures:
   Not applicable.

iii. Is the project within 2,000 feet of any site in the NYSDEC Environmental Site Remediation database? ☐ Yes ☒ No
   • Provide DEC ID number(s):

iv. If yes to (i), (ii) or (iii) above, describe current status of site(s):
E.2. Natural Resources On or Near Project Site

a. What is the average depth to bedrock on the project site? 1,200 feet

b. Are there bedrock outcroppings on the project site? Yes/No

If Yes, what proportion of the site is comprised of bedrock outcroppings? 0%

c. Predominant soil type(s) present on project site: Plymouth (PIA) 100%

d. What is the average depth to the water table on the project site? Average: 60 feet

e. Drainage status of project site soils:
   - Well Drained: 100% of site
   - Moderately Well Drained: % of site
   - Poorly Drained: % of site

f. Approximate proportion of proposed action site with slopes:
   - 0-10%: 100% of site
   - 10-15%: % of site
   - 15% or greater: % of site

h. Surface water features.

i. Does any portion of the project site contain wetlands or other waterbodies (including streams, rivers, ponds or lakes)? Yes/No

ii. Do any wetlands or other waterbodies adjoin the project site? Yes/No

If Yes to either i or ii, continue. If No, skip to E.2.i.

iii. Are any of the wetlands or waterbodies within or adjoining the project site regulated by any federal, state or local agency? Yes/No

If Yes, describe:

For each identified regulated wetland and waterbody on the project site, provide the following information:

- Streams: Name Classification
- Lakes or Ponds: Name
- Wetlands: Name Classification Approximate Size

v. Are any of the above water bodies listed in the most recent compilation of NYS water quality-impaired waterbodies? Yes/No

If yes, name of impaired water body/bodies and basis for listing as impaired:

l. Is the project site in a designated Floodway? Yes/No

j. Is the project site in the 100 year Floodplain? Yes/No

k. Is the project site in the 500 year Floodplain? Yes/No

l. Is the project site located over, or immediately adjoining, a primary, principal or sole source aquifer? Yes/No

If Yes:
   i. Name of aquifer: Suffolk County Groundwater Management Zone III
m. Identify the predominant wildlife species that occupy or use the project site:  
   [Table of species]

n. Does the project site contain a designated significant natural community?  
   [Yes/No]
   i. Describe the habitat/community (composition, function, and basis for designation):
   [Description]
   ii. Source(s) of description or evaluation:
   [Source(s)]
   iii. Extent of community/habitat:
   - Currently: [acres]
   - Following completion of project as proposed: [acres]
   - Gain or loss (indicate + or -): [acres]

o. Does project site contain any species of plant or animal that is listed by the federal government or NYS as endangered or threatened, or does it contain any areas identified as habitat for an endangered or threatened species?  
   [Yes/No]

p. Does the project site contain any species of plant or animal that is listed by NYS as rare, or as a species of special concern?  
   [Yes/No]

q. Is the project site or adjoining area currently used for hunting, trapping, fishing or shell fishing?  
   [Yes/No]
   If yes, give a brief description of how the proposed action may affect that use:
   [Description]

E.3. Designated Public Resources On or Near Project Site

a. Is the project site, or any portion of it, located in a designated agricultural district certified pursuant to Agriculture and Markets Law, Article 25-AA, Section 303 and 304?  
   [Yes/No]
   If Yes, provide county plus district name/number:
   [District Name/Number]

b. Are agricultural lands consisting of highly productive soils present?  
   [Yes/No]
   i. If Yes, acreage(s) on project site?
   ii. Source(s) of soil rating(s):

b. Does the project site contain all or part of, or is it substantially contiguous to, a registered National Natural Landmark?  
   [Yes/No]
   i. Nature of the natural landmark:  
      - [Biological Community]
      - [Geological Feature]
   ii. Provide brief description of landmark, including values behind designation and approximate size/extent:
   [Description]

d. Is the project site located in or does it adjoin a state-listed Critical Environmental Area?  
   [Yes/No]
   i. CEA name:
   ii. Basis for designation:
   iii. Designating agency and date:
e. Does the project site contain, or is it substantially contiguous to, a building, archaeological site, or district which is listed on, or has been nominated by the NYS Board of Historic Preservation for inclusion on, the State or National Register of Historic Places?  □ Yes □ No

If Yes:
   i. Nature of historic/archaeological resource: □ Archaeological Site □ Historic Building or District
   ii. Name: __________________________
   iii. Brief description of attributes on which listing is based:

f. Is the project site, or any portion of it, located in or adjacent to an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory?  □ Yes □ No

g. Have additional archaeological or historic site(s) or resources been identified on the project site?  □ Yes □ No

If Yes:
   i. Describe possible resource(s):
   ii. Basis for identification:

h. Is the project site within five miles of any officially designated and publicly accessible federal, state, or local scenic or aesthetic resource?  □ Yes □ No

If Yes:
   i. Identify resource: Lakeland County Park, Connecticut River State Park, Bohemia County Park, Sans Souci County Park
   ii. Nature of, or basis for, designation (e.g., established highway overlook, state or local park, state historic trail or scenic byway, etc.): state and local parks
   iii. Distance between project and resource: within 5 miles.

i. Is the project site located within a designated river corridor under the Wild, Scenic and Recreational Rivers Program 6 NYCRR Part 666?  □ Yes □ No

If Yes:
   i. Identify the name of the river and its designation:
   ii. Is the activity consistent with development restrictions contained in 6NYCRR Part 666?  □ Yes □ No

F. Additional Information
Attach any additional information which may be needed to clarify your project.

If you have identified any adverse impacts which could be associated with your proposal, please describe those impacts plus any measures which you propose to avoid or minimize them.

G. Verification
I certify that the information provided is true to the best of my knowledge.

Applicant/Sponsor Name: Suffolk County Dept. of Public Works  Date: 12/3/2014

Signature: __________________________  Title: CHIEF ENGINEER
Part 2 – Identification of Potential Project Impacts

Instructions: Part 2 is to be completed by the lead agency. It is designed to help the lead agency inventory all potential resources that could be affected by a proposed project or action. We recognize that the lead agency’s reviewer(s) will not necessarily be environmental professionals. So, the questions are designed to walk a reviewer through the assessment process by providing a series of questions that can be answered using the information found in Part 1. To further assist the lead agency in completing Part 2, the form identifies the most relevant questions in Part 1 that will provide the information needed to answer the Part 2 question. When Part 2 is completed, the lead agency will have identified the relevant environmental areas that may be impacted by the proposed activity.

Tips for completing Part 2:
• Review all of the information provided in Part 1.
• Review any application, maps, supporting materials and the Full EAF Workbook.
• Answer each of the 18 questions in Part 2.
• If you answer “YES” to a numbered question, please complete all the questions that follow in that section.
• If you answer “NO” to a numbered question, move on to the next numbered section.
• Check appropriate column to indicate the anticipated size of the impact.
• Proposed projects that would exceed a numeric threshold contained in a question should result in the reviewing agency checking the box “Moderate to large impact may occur.”
• The reviewer is not expected to be an expert in environmental analysis.
• If you are not sure or undecided about the size of an impact, it may help to review the sub-questions for the general question and consult the workbook.
• When answering a question consider all components of the proposed activity, that is, the “whole action.”
• Consider the possibility for long-term and cumulative impacts as well as direct impacts.
• Answer the question in a reasonable manner considering the scale and context of the project.

1. Impact on Land
The proposed action may involve construction on, or physical alteration of the land surface of the proposed site. (See Part 1.D.1)
If “YES”, answer questions a-h. If “NO”, move on to Section 2.

2. **Impact on Geological Features**

The proposed action may result in the modification or destruction of, or inhibit access to, any unique or unusual land forms on the site (e.g., cliffs, dunes, minerals, fossils, caves). (See Part 1.E.2.g)

*If “YES”, answer questions a-c. If “NO”, move on to Section 3.*

<table>

Part 3 – Evaluation of the Magnitude and Importance of Project Impacts
and
Determination of Significance

Part 3 provides the reasons in support of the determination of significance. The lead agency must complete Part 3 for every question in Part 2 where the impact has been identified as potentially moderate to large or where there is a need to explain why a particular element of the proposed action will not, or may, result in a significant adverse environmental impact.

Based on the analysis in Part 3, the lead agency must decide whether to require an environmental impact statement to further assess the proposed action or whether available information is sufficient for the lead agency to conclude that the proposed action will not have a significant adverse environmental impact. By completing the certification on the next page, the lead agency can complete its determination of significance.

Reasons Supporting This Determination:
To complete this section:
* Identify the impact based on the Part 2 responses and describe its magnitude. Magnitude considers factors such as severity, size or extent of an impact.
* Assess the importance of the impact. Importance relates to the geographic scope, duration, probability of the impact occurring, number of people affected by the impact and any additional environmental consequences if the impact were to occur.
* The assessment should take into consideration any design element or project changes.
* Repeat this process for each Part 2 question where the impact has been identified as potentially moderate to large or where there is a need to explain why a particular element of the proposed action will not, or may, result in a significant adverse environmental impact.
* Provide the reason(s) why the impact may, or will not, result in a significant adverse environmental impact
* For Conditional Negative Declarations identify the specific condition(s) imposed that will modify the proposed action so that no significant adverse environmental impacts will result.
* Attach additional sheets, as needed.

Below is a bulleted description of the attachments that make up this Part III Section. The Part III Section includes the required responses to all Part II Questions where the impact has been identified as potentially moderate to large as well as information requested by the Suffolk County Council on Environmental Quality at its public meeting on January 20, 2015. In addition, Attachment H has been added to provide additional information based on the September 21, 2016 CEQ meeting discussion.

- Attachment A - NYSDEC Commissioner’s determination that Suffolk County should be the SEQRA Lead Agency for this project
- Attachment B - Part III Responses for all EAF Part II Questions in which the impact was identified as potentially moderate to large.
- Attachment C – Town of Brookhaven Ronkonkoma Hub SEQRA Documents
- Attachment D – Suffolk County 2010 SEQRA determination for the 10 Million Gallon Per Day Expansion of the Suffolk County Southwest Sewer District # 3 - Bergen Point Sewage Treatment Plant
- Attachment E – Information regarding Bergen Point Sewage Treatment Plant’s Available Flow Capacity
- Attachment F – Information regarding the proposed usage of the proposed sewer line connecting Ronkonkoma Hub to the Southwest Sewer District
- Attachment G – Information regarding the passage of the sewer line through the Connetquot River Headwaters
- Attachment H – Addendum to Part I
- Attachment I – Additional information based on the September 21, 2016 CEQ Meeting discussion

</tbody>
</table>

Upon review of the information recorded on this EAF, as noted, plus the additional support information and considering both the magnitude and importance of each identified potential impact, it is the conclusion of Suffolk County lead agency that:

- ☒ A. This project will result in no significant adverse impacts on the environment, and, therefore, an environmental impact statement need not be prepared. Accordingly, this negative declaration is issued.

- ☐ B. Although this project could have a significant adverse impact on the environment, that impact will be avoided or substantially mitigated because of the following conditions which will be required by the lead agency:

  There will, therefore, be no significant adverse impacts from the project as conditioned, and therefore, this conditioned negative declaration is issued. A conditioned negative declaration may be used only for UNLISTED actions (see 6 NYCRR 617.7(d)).

- ☐ C. This Project may result in one or more significant adverse impacts on the environment, and an environmental impact statement must be prepared to further assess the impact(s) and possible mitigation and to explore alternatives to avoid or reduce those impacts. Accordingly, this positive declaration is issued.

Appendix 1 – Force main routing maps
Attachment A - NYSDEC Commissioner’s Determination that Suffolk County Should Be the SEQRA Lead Agency for this Project
New York State
Department of Environmental Conservation
Commissioner's Determination
of
Lead Agency Under Article 8
of the
Environmental Conservation Law

PROJECT: Proposal by Suffolk County to develop a sewer pumping station and sewer main as a component of the Ronkonkoma Hub Development Project in the Village of Islandia, Town of Brookhaven and Town of Islip, County of Suffolk

DISPUTING AGENCIES: Suffolk County, through its Department of Public Works v. Board of Trustees of the Village of Islandia.

I have been asked to designate a lead agency to conduct an environmental review under the New York State Environmental Quality Review Act (SEQR; Article 8 of the New York State Environmental Conservation Law [ECL], with implementing regulations at Part 617 of Title 6 of the Official Compilation of Codes, Rules and Regulations of the State of New York [6 NYCRR Part 617]). The review is for the proposed development of a sewer pumping station and sewer main associated with the Ronkonkoma Hub Development Project. This designation of Suffolk County, through its Department of Public Works, to serve as lead agency is based on my finding that each of the three lead agency criteria as discussed below favors the County to serve as lead agency.

ACTION AND SITE

The project involves installation of a pump station and new sewer lines to provide sewage service to the Ronkonkoma HUB, a 58 acre mixed-use residential and commercial development in the Town of Brookhaven. The pump station will be located in the Town of Islip. The sewer lines will run for approximately seven miles through three municipalities (the towns of Brookhaven and Islip as well as the Village of Islandia) along roads and streets, conveying sewage to the Southwest Sewer District No. 3, and eventually to the Bergen Point Wastewater Treatment Plant located in West Babylon, New York. The project has the capacity to handle 400,000 gallons per day from the Ronkonkoma HUB, and the ability to connect an additional 600,000 gallons per day from other sources.

REGULATORY SETTING

The Ronkonkoma HUB Development was originally planned on the basis that wastewater from the project would flow from the Ronkonkoma HUB Development by a gravity main to an onsite sewage treatment plant (which would be fully contained on the project site). The Town of Brookhaven was the lead agency for this project and a final generic environmental impact statement (Final GEIS) was filed on May 22, 2014. While
several other options for treatment of sewage for this project were discussed in the Final GEIS, the current action selects the alternative that involves construction of a sewer line that would connect to the Southwest Sewer District Connection in Central Islip. It would do so by installing a pump station and running a new force main from the project in the Town of Brookhaven through the Towns of Islip and Village of Islandia.

On December 23, 2014, the Village of Islandia received notification from the Suffolk County Planning Commission that the sewer project was classified as an unlisted action and a negative declaration would likely be issued. On January 6, 2015, the Board of Trustees of the Village of Islandia (Village Board) adopted a resolution to assert lead agency status for this action, classified it as a Type I action and noted concern that the project may result in an adverse impact. Suffolk County convened a meeting of all potentially involved parties to this action on January 20, 2015 to discuss designation of a lead agency. The meeting failed to reach agreement. On January 26, 2015, Gilbert Anderson, Commissioner of the Suffolk County Department of Public Works, requested that the Department resolve this lead agency dispute.

The Village Board has oversight of approximately one mile of roadway within the Village where construction of sewer lines will be installed. The Village Board asserts that it must issue road opening permits and other construction, zoning and planning approvals. Suffolk County, on the other hand, through its Department of Public Works (Suffolk County), is the sponsor of the project and part of the construction will occur on county owned right of ways. The County is responsible for design and construction of the project. The Suffolk County Legislature must approve the project for it to be authorized and commenced.

Although other involved agencies were identified by the parties, the Village Board and Suffolk County are the only agencies involved in this lead agency dispute.

DISCUSSION

In resolving a lead agency dispute, under 6 NYCRR §617.6 (b) (5)(v), I am guided by three criteria listed in order of importance as follows:

(a) whether the anticipated impacts of the action being considered are primarily of statewide, regional, or local significance (i.e., if such impacts are of primarily local significance, all other considerations being equal, the local agency involved will be lead agency);

(b) which agency has the broadest governmental powers to investigate the impacts of the proposed action; and

(c) which agency has the greatest capability to provide the most thorough environmental assessment of the proposed action.
A. FIRST CRITERION

The first criterion concerns the location of the anticipated impacts of the action. The proposed sewer lines will be constructed primarily within existing highway rights-of-way. The route will pass in close proximity to the Connetquot Headwaters and ecosystem, and adjacent to the Lakeland County Park (which contains sensitive wetlands). While these resources could be impacted should the sewer line fail, such impacts are speculative in nature because they would only occur if there was a major failure of the sewer line. In addition, the resources identified by the Village — Connetquot Headwaters and ecosystem and Lakeland County Park — are of regional importance. I view the potential impacts from the project to be both local and regional in nature. Due to the potential regional impacts of the project, the first criterion favors the selection of an agency with regional jurisdiction, namely Suffolk County.

B. SECOND CRITERION

The second criterion also favors Suffolk County to act as lead agency for this review. Suffolk County, as sponsor, designer, and the agency principally responsible for construction oversight of the proposed action, has the broadest governmental powers to conduct the environmental review, and, hence, greater ability to investigate the impacts, if any, of the proposed action. Suffolk County has direct authority over all aspects of the project. As the sponsoring agency, Suffolk County is in the best position to identify and ensure implementation of any measures necessary to avoid or minimize potential impacts from the project that may be revealed during the environmental review process.

The asserted jurisdictions of the Village Board (related to road opening permits as well as planning and zoning approvals for only a segment of the line), are not broader than Suffolk County’s authority as project sponsor.

C. THIRD CRITERION

The third criterion examines which agency has the greatest capability for providing the most thorough environmental assessment. Both the Village Board and Suffolk County have in-house staff or the capability to engage consultants to assist their staff to manage the environmental review process. Although both agencies possess or could obtain capacity to administer the SEQR review of this project, Suffolk County through its Department of Public Works has greater in-house capability to review and manage an environmental review process. Therefore, the third criterion also favors Suffolk County.
FINDING

I conclude that Suffolk County, through its Department of Public Works, should be lead agency for the SEQR review of the proposed pump station and new sewer lines through the towns of Brookhaven and Islip and the Village of Islandia.

The decision that Suffolk County shall serve as lead agency in no way limits the responsibilities of other involved agencies, including the Village Board. Suffolk County must still seek and obtain all necessary approvals and permits from other agencies or authorities with jurisdiction over any aspect of the proposed project. All interested and involved parties to this action are encouraged to participate in the review being conducted by Suffolk County.

Attachment B - Part III Responses for all EAF Part II Questions in which the Impact Was Identified as Potentially Moderate to Large

Below are the EAF Part III Responses for all EAF Part II Questions in which the impact was identified as potentially moderate to large:

- For EAF Part II Question 1.e which states “The proposed action may involve construction that continues for more than one year or in multiple phases” the moderate to large box was checked because the proposed project is anticipated to take 2 years. However, this project length is not anticipated to result in a significant adverse impact on the environment because the proposed pump station is not adjacent to any uses that would be sensitive to the minor noise and visual impacts that may result from construction. The anticipated hours of construction for the pump station will also be limited to 7 AM to 4 PM Monday through Friday not including holidays. In addition, while the entire force main piping system construction is anticipated to take two years, the construction time at any one individual location along the piping system will be of much shorter duration. It is anticipated that the force main will be constructed at a rate of approximately 200 feet per day. This will insure that a given location is not subject to a significant impact from the construction of the force main piping system. In addition, during actual construction the County will work to implement measures to coordinate traffic flow to insure the safety of the public.

- For EAF Part II Question 16.a which states “The proposed action is located within 1500 feet of a school, hospital, licensed day care center, group home, nursing home or retirement community” the moderate to large box was checked because the proposed project is within 1,500 feet of a licensed day care center. However, the pump station is not anticipated to result in a significant adverse impact due to its distance separation of approximately 1,200 feet and the fact that the sanitary system will be housed indoors and include an odor control system to further control odors. The pumping station project will also include landscaping features that will serve as noise and light barriers. In addition, the Ronkonkoma Hub development project will further buffer the licensed day care center from the pump station. During construction typical pedestrian and public safety measures along the project boundaries will be incorporated. In addition, during actual construction the County will work to implement measures to coordinate traffic flow to insure the safety of the public.

1.0 Executive Summary

1.1 Introduction and Project History

This Executive Summary is designed solely to provide an overview of the proposed action, a brief summary of the potential adverse impacts identified and mitigation measures proposed as well as alternatives considered. Review of the Executive Summary is not a substitute for the full evaluation of the proposed action performed in Sections 2.0 through 8.0 of the DEIS.

This document is a Draft Supplemental Generic Environmental Impact Statement (DSGEIS) for the Ronkonkoma Hub Transit-Oriented Development (TOD) prepared in accordance with the State Environmental Quality Review Act (SEQRA) and its implementing regulations at 6 NYCRR Part 617 for the action contemplated herein, and is based upon the Positive Declaration that was adopted by the Town Board of the Town of Brookhaven (hereinafter “Town Board”) on October 1, 2013. The proposed action consists of the following:

- Adoption of the Urban Renewal Plan
- Adoption of the Land Use and Implementation Plan
- Adoption of a TOD District
- Change of zone of parcels within the Ronkonkoma Hub area to the TOD District
- Approval of a Conceptual Master Plan (“Maximum Density Concept Plan”)

The Ronkonkoma Hub area, which constitutes the subject property, consists of 53.73±-acres, generally bounded by Union Avenue and Union Street to the north; Village Plaza Drive to the east; County Road 29 (Ronkonkoma Avenue), Garrity Avenue and Hawkins Avenue to the west; and the railroad tracks of the Metropolitan Transit Authority (MTA) Long Island Railroad (LIRR) to the south, in the hamlet of Ronkonkoma, Town of Brookhaven, Suffolk County.
Commencing in 2007, the Town Board has been working with the community to revitalize the Ronkonkoma Hub area. Since that time, the Town of Brookhaven completed a two-phased planning study to revitalize the Ronkonkoma Hub area, known as the Ronkonkoma Hub Planning Study. The Town also prepared a draft Ronkonkoma Hub Transit-Oriented Development Draft Land Use and Implementation Plan and a Draft Generic Environmental Impact Statement (hereinafter the “2010 DGEIS”), which evaluated a theoretical maximum development scenario. Examination of the Theoretical Full Build Plan, as well as two alternatives, enabled the Town Board to conduct a comprehensive environmental review of the overall proposed action and take a “hard look” pursuant to SEQRA and its implementing regulations at 6 NYCRR Part 617.

The Town of Brookhaven Town Board, serving as lead agency, accepted the 2010 DGEIS on September 21, 2010, and a public hearing was held on October 19, 2010. The support for the redevelopment of the Ronkonkoma Hub area was evident from the aforesaid public hearing and the various community meetings. Subsequent to the public hearing on the 2010 DGEIS, the Town of Brookhaven, in an effort to ensure that the planning efforts would result in the actual redevelopment of the blighted Hub area, decided to seek private developer input. The Town issued a Request for Expressions of Interest (RFEI) and ultimately a Request for Qualifications (RFQ) for a Master Developer. Upon review of preliminary plans received as part of the RFEI and RFQ processes, the Town of Brookhaven prepared The Ronkonkoma Hub Study Area Blight Study (Blight Study), which ultimately resulted in the preparation of an Urban Renewal Plan for the Ronkonkoma Hub area. The densities recommended in the Urban Renewal Plan are different than those originally evaluated in the 2010 DGEIS, as such an updated Environmental Assessment Form was prepared by the Town Board, and, as previously noted, a Positive Declaration indicating the need to prepare a supplemental draft environmental impact statement was adopted on October 1, 2013. Thus, to ensure complete and comprehensive environmental review in accordance with SEQRA and its implementing regulations at 6 NYCRR Part 617, the Town of Brookhaven is preparing this DSGEIS to identify and evaluate potential significant adverse environmental impacts that may differ from those evaluated in the 2010 DGEIS, in accordance with 6 NYCRR §617.9(a)(7) Supplemental EISs.

As the maximum potential development being considered for the Ronkonkoma Hub area, as defined in the Urban Renewal Plan, is greater than that evaluated in the 2010 DGEIS, this DSGEIS is being prepared to address potential changes in impacts that would result from the modified proposed action.
1.2 Description of the Proposed Action

Proposed Action and Planning Concept

As indicated above, in order to redevelop the Ronkonkoma Hub area in accordance with the concept set forth in the draft Urban Renewal Plan and the Land Use and Implementation Plan, and the mix and density of development proposed by the Master Developer, the following actions would be required:

- Adoption of the Urban Renewal Plan
- Adoption of the Land Use and Implementation Plan
- Adoption of a TOD District
- Change of zone of parcels within the Ronkonkoma Hub area to the TOD District
- Approval of a Conceptual Master Plan ("Maximum Density Concept Plan")

Urban Renewal Plan

In September 2012, the Town of Brookhaven prepared Blight Study for the Ronkonkoma Hub. The Blight Study found sufficient evidence to determine the Ronkonkoma Hub area to be a substandard or insanitary in accordance with both Article 15 of the New York State General Municipal Law and Article XLI of Chapter 85 of the Town of Brookhaven Town Code. Based upon this, the Town authorized the preparation of an urban renewal plan. The intent of the Urban Renewal Plan is to address blighted conditions identified within the Project Area. It was prepared in order to facilitate the redevelopment of the Ronkonkoma Hub area featuring a mix of higher density residential development, commercial, hospitality, institutional, office, and retail uses, conference, entertainment and exhibition venues, and public designated outdoor spaces.

The Urban Renewal Plan makes several recommendations with regard to land uses, zoning and other land use controls, building conditions and public improvements, most notably:

- Redevelopment with several multi-family residential buildings, mixed-use buildings potentially containing office, residential and retail uses, mixed-use buildings potentially containing commercial, exhibition, hospitality, institutional, and residential uses, retail and office buildings, as well as special use/entertainment venues.

- Implementation of a TOD Zoning District in order facilitate the redevelopment.
All structures to be acquired and demolished with the exception of the existing MTA parking garage and potentially the train station.

Improvements and upgrades to infrastructure, including roads, sidewalks, curbs, public hardscape and landscape, gas lines, water mains, electric distribution, stormwater runoff collection systems, street and walkway lighting, public parking areas, and an sewage treatment plant (STP).

Based on the findings and recommendations of the Urban Renewal Plan, a Conceptual Land Use Plan was developed for the proposed redevelopment of the Ronkonkoma Hub area. In total, the Conceptual Land Use Plan provides the maximum permitted development densities for each of the anticipated use types: a maximum of 1,450 dwelling units, approximately 195,000 square feet of retail space, approximately 360,000 square feet of office/medical space, and approximately 60,000 square feet of flex space (for hospitality, conference, exhibition, and/or residential uses).

**Land Use and Implementation Plan**

The Land Use and Implementation Plan was prepared as a result of the extensive planning process undertaken by the Town of Brookhaven for the redevelopment and revitalization of the 53.73±-acre area situated around the Ronkonkoma train station. It provides an overview of the Ronkonkoma Hub area, the background and history of the Town’s planning process, the proposed form-based code (FBC), and a redevelopment concept (Conceptual Land Use Plan) that illustrates the overall type and level of development that could take place with the application of the proposed FBC.

The Land Use and Implementation Plan, among other things, examines the proposed TOD District, discusses SEQRA compliance and the environmental and public review process, and discusses the implementation strategy for realizing the Town’s vision for the redevelopment of the Ronkonkoma Hub area.

**TOD District and Change of Zone**

The TOD District has been designed as an FBC. It establishes objectives, policies, and standards to promote orderly development and redevelopment within the TOD District area for purposes of encouraging high-density mixed-use development, including housing, retail, entertainment, institutional and office uses. The overall intent of the TOD District is to encourage the efficient use of land, be a catalyst for revitalization, and foster a sense of place through development of a new transit-oriented, mixed use, pedestrian-friendly community.

Development within the Ronkonkoma Hub area would be governed by a “Regulating Plan.” This plan designates the subdistricts that comprise the TOD District and the various roadways within and adjacent to the subdistrict. There are four subdistricts proposed, as follows:
Neighborhood Subdistrict (A) -- The Neighborhood Subdistrict is a predominantly residential area with medium-to-high density building types. It allows for a limited amount of ground floor commercial use and live/work units. It provides a transition between single-family homes and more compact mixed-use areas.

Downtown Living Subdistrict (B) -- The Downtown Living Subdistrict is predominantly a mixed-use residential area with medium-to-high density building types. It allows for up to 50 percent commercial use.

Marketplace Subdistrict (C) -- The Marketplace Subdistrict allows for predominantly retail-focused mixed-use, maintaining a high level of flexibility to attract diverse local and national retailers.

Main Street Subdistrict (D) -- The Main Street Subdistrict is intended as predominantly a pedestrian-oriented, mixed-use town center. Regional shopping, entertainment, and outdoor dining uses are encouraged.

Each of the subdistricts is further broken down by maximum height in stories and maximum height in feet, as depicted on the Regulating Plan. The Regulating Plan also provides additional development parameters (e.g., street types, principal and secondary frontages, and blocks). Together with the Regulating Plan, development would be subject to compliance with the standards and regulations of the TOD District for streets and roadways (including streetscape standards), outdoor space, signage, lighting and parking.

The TOD District, once adopted by the Town Board, is proposed to be applied to the 54 individual tax parcels located within the 53.73±-acre Ronkonkoma Hub area.

**Maximum Density Concept Plan**

A Conceptual Master Plan ("Maximum Density Concept Plan") has been prepared to conform to the parameters of the Regulating Plan (described above). The Conceptual Master Plan presented herein is not a specific development proposal, as it is not feasible to define the specific development of the entire 53.73± acres of the Ronkonkoma Hub area. Development is expected to take place over several years, and the specific uses and level of development will be dictated by market demand. However, review of the Maximum Density Concept Plan, which examines maximum potential development proposed within the Ronkonkoma Hub area, enables the Town Board to take a "hard look" at the relevant environmental impacts through the performance of a comprehensive environmental review pursuant to SEQRA and its implementing regulations at 6 NYCRR Part 617.

The Maximum Density Concept Plan includes the following program: 1,450 residential units; 195,000 SF of retail; 360,000 SF of office/medical; and 60,000 SF of flex space (including hospitality, conference and exhibition space, and/or residential
Total parking provided is 3,638 parking spaces, not including those spaces within the existing parking garage (1,043) and existing parking lot (341).

The Maximum Density Concept Plan complies with the Regulating Plan (contained in the TOD District), which depicts the locations of the subdistricts set forth in the TOD District, and describes the character to be achieved within each of the subdistricts. The predominantly residential subdistricts are located within the northern and eastern extents of the Ronkonkoma Hub area, which relates to the existing surrounding residential development, while the predominantly retail subdistrict is situated at the western extent of the Ronkonkoma Hub area, along Hawkins and Railroad Avenues. The Regulating Plan also depicts mixed-use subdistricts (the Marketplace and the Main Street Subdistricts), that allow greater building heights, generally situated closer to the railroad tracks and around the train station. The Maximum Density Concept Plan conforms to the Regulating Plan in terms of distribution of uses, heights and density of development.

Purpose, Needs and Benefits

The purpose, needs and benefits of the proposed action have remained the same since the time of the 2010 DGEIS. Since the Town embarked on this planning initiative in 2007, the overall goal was, and remains, to revitalize the Ronkonkoma Hub area. The various actions that comprise the proposed action, which are contemplated herein, are consistent with the stated goals of the Ronkonkoma Hub Planning Study as they encourage the efficient use of land, provide for revitalization, and foster a sense of place through development of a new transit-oriented, mixed-use, self-sufficient community. The proposed action would also enhance the tax base through redevelopment of existing vacant/unoccupied parcels and new development by increasing the area’s marketability. The TOD District aims to encourage uses that complement the surrounding existing uses as well as better utilize existing public transit infrastructure at the Ronkonkoma Station. The Maximum Density Concept Plan draws upon the conclusions of the Urban Renewal Plan as a basis for the design plan, conforms to the proposed TOD District, and achieves the overall goals for the Ronkonkoma Hub area that have been set forth by the Town.

Required Permits and Approvals

The following table identifies permits and approvals required for implementation of the proposed action. The approvals noted with an asterisk (*) in the table below would be required for actual development that would occur in accordance with the TOD District. These approvals are not needed for adoption of the Urban Renewal Plan, the Land Use and Implementation Plan, the TOD District or associated changes of zone of specific properties, which are all Town Board actions.

---

*The site plan and potential subdivision approvals are required for actual development. The recommendation on the Urban Renewal Plan is required prior to formal action by the Town Board on the Urban Renewal Plan.*
Use of double-paned glass windows
- Providing laminating on both layers of window glazings
- Providing a wider airspace between window panels
- Upgrading building exterior massing, where necessary and practicable

- Parcels developed or redeveloped would be required to install rooftop equipment that does not exceed Town noise code standards, and same would be evaluated during site plan review. Such equipment would be located in penthouse rooms and/or enclosures, or would utilize the building height and geometry to create building blockage for receptor locations, and/or install, as necessary to attenuate noise, screening around the externally-located rooftop mechanical equipment.

- Loading and service activities on parcels to be developed or redeveloped will be internally situated or screened to minimize noise associated with loading activities from the surrounding residential areas.

- Construction equipment would be required to have appropriate noise muffler systems. Excessive idling of construction equipment engines would be prohibited.

Socioeconomics

As there are no significant adverse demographic or economic impacts associated with the proposed action, no mitigation measures are required.

Community Facilities and Services

In order to ensure that potential impacts to community service providers are minimized, the following mitigation measures are proposed:

- The taxes generated by the proposed redevelopment of the properties within the Ronkonkoma Hub area would assist in off-setting the increases in the provision of community services, including fire protection, police protection and education.

- Parcels developed or redeveloped will comply with New York State building and fire codes.

- All development/redevelopment applications would be required to be reviewed by the Brookhaven Fire Marshal, and would comply with all Fire Marshal requirements.

xxx Executive Summary
Parcels developed or redeveloped will provide proper egress and ingress for emergency service providers, including to below-grade and above-grade parking garages.

Aesthetics

In order to ensure that there will be positive impacts to the visual character of the Ronkonkoma Hub area, and no significant adverse impacts will be created, the TOD District has incorporated design measures that must be complied with, to wit: any proposed building must meet the requirements of the building configuration, alignment and parking placement for the subdistrict in which it is located, as set forth in the TOD District.

Requirement for street assembly, streetscape improvements, designated outdoor spaces, signs and public supplementary lighting controls are specified in the TOD District. All development/redevelopment must conform to the specific requirements for the subdistrict in which it is located.

Cultural Resources

There have been no significant historic or archaeological resources identified within or adjacent to the Ronkonkoma Hub area that would be adversely impacted by the proposed action. Thus, no mitigation measures are required.

1.5 Conditions and Criteria Under Which Future Actions will be Undertaken or Approved Including Requirements for Subsequent SEQRA Compliance

6 NYCRR §617.10(c) and (d) state, in pertinent part:

"(c) Generic EISs...should set forth specific conditions or criteria under which future actions will be undertaken or approved, including requirements for any subsequent SEQRA compliance..."

(d) When a final generic EIS has been filed under this part:

(1) No further SEQRA compliance is required if a subsequent proposed action will be carried out in conformance with the conditions and thresholds established for such actions in the generic EIS or its findings statement;
Based on the analyses contained in this DSGEIS, the following represent the conditions and thresholds, which, if met, would allow full development of the Ronkonkoma Hub area within the Town of Brookhaven without the need for further SEQRA compliance or further approval from the Town Board:

- Total development of the Ronkonkoma Hub area shall not exceed the following development limits:
  - 1,450 residential units
  - Approximately 195,000 SF - retail
  - Approximately 360,000 SF - office/medical
  - Approximately 60,000 SF - flex space (including hospitality, conference and exhibition space, and/or residential units)

- Sanitary discharge to the proposed STP associated with development/redevelopment of parcels within the Ronkonkoma Hub area shall not exceed 400,000 gpd. In the event that development/redevelopment is proposed that would cause this capacity to be exceeded, additional evaluation must be conducted and additional sewage capacity must be secured to support the additional development.

- No residential development shall be permitted south of Railroad Avenue between Hawkins Avenue and Mill Road in order to minimize the potential for residents within the proposed development to be affected by LIRR operational noise.

³ With the exception of the limitation on residential units (which is a maximum), the amount of retail, office/medical and flex space can vary (as same will be dictated by actual market demand), as long as such development conforms with the requirements of the TOD District.
The development or improvement of the internal and immediate perimeter roadway systems within and bordering the Ronkonkoma TOD area should be performed as the parcels adjacent to those roads are developed to ensure adequate and safe access to surrounding roadways. Functionally, the proposed improvements to the majority of these roads are to provide parking areas and other roadside amenities to serve the adjacent and surrounding parcels.

The roundabout proposed at Railroad Avenue and Mill Road must be completed at such time as the adjacent development access which forms the south leg is developed (see Condition Figure B).

The northbound right turn lane proposed at the intersection of Mill Road at Union Avenue (described in the Traffic Mitigation Table for location 6 and depicted on Condition Figure A) must be constructed when either the adjacent Parcel I or Parcel K, as shown on the Maximum Density Concept Plan, is developed.

With respect to off-site mitigation, the following discussion provides the required off-site mitigation phasing, and identifies trip generation thresholds at which certain mitigation must be in place. It is noted that these thresholds are based on the net trip generation, which represents the anticipated trips after adjustments for the TOD and pass-by credits have been applied.

Mitigation Level One (Initial Construction) - Prior to occupancy of the initially constructed building(s) within the TOD, Hawkins Avenue should be improved from Railroad Avenue to just south of the LIE. This includes the installation of a new traffic signal at Railroad Avenue. The mitigation detailed in the Traffic Mitigation Table for locations 5 and 10 and depicted on Condition Figure A, shall be completed during this initial phase and prior to building occupancy (except for the requirement for an additional northbound lane on Hawkins Avenue north of Union Avenue for which additional right-of-way is required, which is discussed as a separate mitigation phasing item).

Mitigation Level Two - Prior to occupancy of buildings in the TOD that increase net trip generation of the development during the weekday p.m. peak period above 400 vehicles per hour (combined entering and exiting), the mitigation detailed in the Traffic Mitigation Table for locations 7, 8 and 9 and depicted on Figure A shall be completed.

The figures and table referenced in this Executive Summary can be found in Section 5.0 of this DSGEIS.

The TOD credit is a reduction in gross trip generation of 25 percent, applied to all uses in the TOD. The pass-by credit is a further reduction in trip generation for retail and restaurant uses within the TOD as prescribed in the Institute of Transportation Engineer's Trip Generation Manual, latest edition, but shall not exceed 20 percent for any specific use (see Section 3 of the Traffic Impact Study in Appendix H).
Mitigation Level Three - Prior to occupancy of buildings in the TOD that increase net trip generation of the development during the weekday p.m. peak period above 500 vehicles per hour (combined entering and exiting), the mitigation detailed in the Traffic Mitigation Table for locations 2 and 4 and depicted on Figure B, along the entirety of the LIE South Service Road shall be completed.

Mitigation Level Four - Prior to occupancy of buildings in the TOD that increase net trip generation of the development during the weekday p.m. peak period above 700 vehicles per hour (combined entering and exiting), the mitigation detailed in the Traffic Mitigation Table for locations 1 and 3 and depicted on Figure B, along the entirety of the LIE North Service Road shall be completed.

Mitigation Level Five - Upon reaching a trip generation of 1,100 vehicles in the p.m. peak hour (combined entering and exiting trips), traffic mitigation along Hawkins Avenue, between Union Avenue and the LIE South Service Road that was begun under Mitigation Level One (Initial Construction) must be completed, as detailed in the Traffic Mitigation Table for location 5 and depicted on Figure A. This includes the construction of the second northbound lane on Hawkins Avenue from Union Avenue to the LIE South Service Road and the striping of the westbound Union Avenue approach to three lanes as depicted on Figure A. No building permits shall be issued for development that would result in a trip generation of greater than 1,100 vehicles in the p.m. peak hour (combined entering and exiting) until such traffic mitigation is implemented, unless same is deemed unnecessary by the Town Board based upon a change in traffic conditions.

In the event that any of the conditions are proposed to be exceeded by future development, additional SEQRA compliance would be necessary in accordance with 6 NYCRR §617.10(d)(2), (3) or (4), as would be appropriate, given the actual development plan proposed and the associated potential environmental impacts associated therewith.

Furthermore, with respect to future development approvals (i.e., after the Town Board adopts the TOD District, applies the zoning to the Ronkonkoma Hub area, and approves the Maximum Density Concept Plan, as described above), the applicants will be required to obtain site plan approval from the Planning Board for proposed development. In addition to the standard site plan application requirements, at the time a site plan is submitted to the Town, an applicant must:

- Prepare and submit a construction traffic management and logistics plan. This plan, at a minimum, should indicate the following:
Days/hours of proposed construction activity
Designated routes of heavy vehicles to and from the site
Parking areas for workers and heavy vehicles
Construction staging areas

If existing designated commuter parking will be temporarily or permanently displaced to accommodate the proposed development, prepare and submit a plan that demonstrates that parking will be replaced at a minimum ratio of one-to-one. Such replacement parking shall be in place prior to the displacement of existing designated commuter parking, and shall be acceptable to the MTA.

Provide a letter of sewer availability (or documentation from the appropriate regulatory agency as to the approved method of sanitary discharge) prior to final site plan approval.

Demonstrate (for multi-story buildings) that there is adequate water pressure for the higher elevations in the buildings, and, where necessary, install a booster pump system.

Implement water conservation measures, including low-flow fixtures, low-flow toilets, and/or drip irrigation.

Submit confirmation that the site plan has been submitted to the Ronkonkoma Fire Department for review.
2.0

Introduction and Description of the Proposed Action

2.1 Project History and Summary of the SEQRA Process

Commencing in 2007, the Town Board has been working with the community to revitalize the Ronkonkoma Hub area. The Ronkonkoma Hub area consists of 53.73± acres, generally bounded by Union Avenue and Union Street to the north; Village Plaza Drive to the east; County Road 29 (Ronkonkoma Avenue), Garrity Avenue and Hawkins Avenue to the west; and the railroad tracks of the Long Island Railroad to the south, in the hamlet of Ronkonkoma (see Figure 1). Since that time, the Town of Brookhaven completed a two-phased planning study to revitalize the Ronkonkoma Hub area, known as the Ronkonkoma Hub Planning Study. The goal was, and continues to be, to develop a vision that supports the compact, mixed-use, transit-oriented redevelopment of this area. Phase 1 of the planning study, completed in 2008, focused on documenting existing conditions and identifying potential opportunity sites for transit-oriented development. Phase 2 of the study, completed in early 2009, built upon the work completed in Phase 1 and, among other things, reviewed case studies of existing successful transit-oriented development (TOD) projects and offered various recommendations relating to redevelopment opportunities, TOD zoning, transportation issues and concept plans.

In 2010, the Town prepared a draft Ronkonkoma Hub Transit-Oriented Development Draft Land Use and Implementation Plan ("Draft Land Use and Implementation Plan") and a Draft Generic Environmental Impact Statement (hereinafter the "2010 DGEIS"), which evaluated a theoretical maximum development scenario pursuant to the aforesaid Draft Land Use and Implementation Plan. The proposed action examined in the 2010 DGEIS included the adoption the Draft Land Use and Implementation Plan, the adoption of the Ronkonkoma Hub Transit-Oriented Development District ("TOD District") (a form-based code [FBC]), the rezoning of the Ronkonkoma Hub area (also referred to as the "TOD area") to the TOD District, and the redevelopment of the area in accordance with the TOD District, based upon the Theoretical Full Build Plan.
The Theoretical Full Build Plan examined in the 2010 DGEIS included the redevelopment of opportunity sites with preferred land uses (i.e., multi-family residential, retail, restaurant, and office). The Theoretical Full Build Plan included the following program mix:

- 615 Residential Units
- 60,875 square feet - Retail
- 49,375 square feet - Office
- 30,000 square feet - Health Club
- 200 seats - Restaurant Use (Total)
- 2,701 new parking spaces
- Sewage Treatment Plant
- Plaza area for outdoor public use

The Theoretical Full Build Plan was not a specific development proposal, but represented a potential redevelopment option that could achieve the goals and objectives of the Draft Land Use and Implementation Plan and complied with the proposed TOD District. The DGEIS also examined two alternatives—the "No Action" alternative and the "Theoretical Maximum Build Out Plan." That alternative assessed the inclusion of property to the south of the railroad tracks within the Town of Islip that is currently used for parking, and was evaluated for potential development with retail space, structured parking and the STP. Examination of the Theoretical Full Build Plan, as well as the two alternatives, enabled the Town Board to conduct a comprehensive environmental review of the overall proposed action and take a "hard look" pursuant to SEQRA and its implementing regulations at 6 NYCRR Part 617.

The Town of Brookhaven Town Board, serving as lead agency, accepted the 2010 DGEIS on September 21, 2010, and a public hearing was held on October 19, 2010.

The support for the redevelopment of the Ronkonkoma Hub area was evident from the aforesaid public hearing and the various community meetings that were held throughout the Phase 1 and Phase 2 planning processes. Subsequent to the public hearing on the 2010 DGEIS, the Town of Brookhaven, in an effort to ensure that the planning efforts would result in the actual redevelopment of the blighted Hub area, decided to seek private developer input as to the financial feasibility of the redevelopment concept. The Town issued a Request for Expressions of Interest (RFEI) and ultimately a Request for Qualifications (RFQ) for a Master Developer.

Upon review of preliminary plans received as part of the RFEI and RFQ processes, the Town of Brookhaven prepared The Ronkonkoma Hub Study Area Blight Study ("Blight Study"). The Blight Study found sufficient evidence to determine the Project Area to be a substandard or insanitary area in accordance with both Article 15 of the New York State General Municipal Law and Article XLI of Chapter 85 of the Town of Brookhaven Town Code. Subsequently, the Town of Brookhaven Town Board, after review of the aforesaid Blight Study, by Town Board Resolution 2012-804, dated
September 20, 2012, designated the Ronkonkoma Hub as appropriate for urban renewal pursuant to Article 15 of the New York State General Municipal Law, and authorized the preparation of an urban renewal plan.

In accordance with the requirements set forth in Article 15 of the General Municipal Law, a draft Urban Renewal Plan for the Ronkonkoma Hub has been prepared and is being reviewed by the Town. The Urban Renewal Plan recommends development at a different mix and density than that contemplated in the aforesaid Land Use and Implementation Plan and 2010 DGEIS. The uses and densities proposed in the Urban Renewal Plan include the following:

- Potential maximum of 1,450 multi-family residential dwelling units
- Approximately 195,000± square feet of retail space
- Approximately 360,000± square feet of office/commercial space
- Approximately 60,000± square feet of "flex" space, to be utilized for conference, exhibition, hospitality, and/or residential uses

Based upon the revised densities, an updated Environmental Assessment Form was prepared by the Town Board, and a Positive Declaration indicating the need to prepare a supplemental draft generic environmental impact statement was adopted on October 1, 2013 (see Appendix A). Thus, to ensure complete and comprehensive environmental review in accordance with SEQRA and its implementing regulations at 6 NYCRR Part 617, the Town of Brookhaven is preparing this Draft Supplemental Generic Environmental Impact Statement (DSGEIS) to identify and evaluate potential significant adverse environmental impacts.

Pursuant to 6 NYCRR §617.9(a):

"(7) Supplemental EISs,

(i) The lead agency may require a supplemental EIS, limited to the specific significant adverse environmental impacts not addressed or inadequately addressed in the EIS that arise from:

(a) changes proposed for the project; or

(b) newly discovered information; or

(c) a change in circumstances related to the project.

(ii) The decision to require preparation of a supplemental EIS, in the case of newly discovered information, must be based upon the following criteria:

(a) the importance and relevance of the information; and

(b) the present state of the information in the EIS."
As the maximum potential development being considered for the Ronkonkoma Hub area is greater than that evaluated in the 2010 DGEIS, this DSGEIS is being prepared to address potential changes in impacts that would result from the modified proposed action.

In order to redevelop the Ronkonkoma Hub area as currently contemplated, the following would be required:

- Adoption of the Urban Renewal Plan
- Adoption of the Land Use and Implementation Plan
- Adoption of a TOD District zoning code ("TOD District")
- Change of zone of parcels within the Ronkonkoma Hub area to the TOD District
- Approval of a Conceptual Master Plan ("Maximum Density Concept Plan")

This DSGEIS examines the proposed action and its associated potential environmental impacts, and focuses on addressing those impacts that have previously been examined but that may occur as a result of implementation of the modified proposed action.

Accordingly, this DSGEIS has been organized by impact issue (see Section 3.0). For each impact issue, a brief summary of existing conditions is presented, followed by a discussion of potential impacts (and identifying those impacts that are different from those evaluated in the 2010 DGEIS), and a presentation of proposed mitigation measures.
2.2 Proposed Action and Planning Concept

2.2.1 Proposed Action

As indicated above, in order to redevelop the Ronkonkoma Hub area in accordance with the concept set forth in the draft *Urban Renewal Plan* and the *Land Use and Implementation Plan*, and the mix and density of development proposed by the Master Developer, the following actions would be required:

- Adoption of the Urban Renewal Plan
- Adoption of the Land Use and Implementation Plan
- Adoption of a TOD District
- Change of zone of parcels within the Ronkonkoma Hub area to the TOD District
- Approval of a Conceptual Master Plan ("Maximum Density Concept Plan")

These actions are described in more detail below.

**Urban Renewal Plan for the Ronkonkoma Hub**

In September 2012, the Town of Brookhaven prepared *The Ronkonkoma Hub Study Area Blight Study* (hereinafter the "Blight Study") for the Ronkonkoma Hub (see Appendix B). The *Blight Study* found sufficient evidence to determine the Ronkonkoma Hub area to be a substandard or insanitary in accordance with both Article 15 of the New York State General Municipal Law and Article XLI of Chapter 85 of the Town of Brookhaven Town Code. Substandard and insanitary conditions observed within the Ronkonkoma Hub area included: vacant and partially-vacant properties (representing 6.5 percent of Study Area) and vacant and partially-vacant buildings (representing 5.5 percent of gross floor area of Study Area), significant underutilization of development potential (the 232,978± square feet of development in the Study Area represents less than 39± percent of the total development potential permitted by zoning), deteriorated buildings, inadequate curb and sidewalk areas, lack of appropriate drainage and sewerage infrastructure, incompatible land uses, and an overall unattractive visual environment.

Subsequently, the Town Board, after review of the aforesaid *Blight Study*, by Town Board Resolution 2012-804, dated September 20, 2012, designated the Ronkonkoma Hub area as appropriate for urban renewal pursuant to Article 15 of the New York

---

"The Blight Study is incorporated as Attachment A of the Urban Renewal Plan."
State General Municipal Law, and authorized the preparation of an urban renewal plan.

In accordance with the requirements set forth in Article 15 of the General Municipal Law, an Urban Renewal Plan for the Ronkonkoma Hub (hereinafter the “Urban Renewal Plan”) was prepared in order to facilitate the redevelopment of the Ronkonkoma Hub area featuring a mix of higher density residential development, commercial, hospitality, institutional, office, and retail uses, conference, entertainment and exhibition venues, and open spaces (see Appendix B). This TOD area would be designed to both complement and benefit from the presence of the Ronkonkoma Long Island Railroad (LIRR) Station and its associated commuter passenger volumes.

The intent of this Urban Renewal Plan is to address blighted conditions identified within the Project Area, defined by Section 501 of the General Municipal Law as “substandard, insanitary, deteriorated or deteriorating conditions, factors, and characteristics” that constitute a “serious and growing menace, is injurious to the public safety, health, morals and welfare...and constitutes a negative influence on adjacent properties impairing their economic soundness and stability, thereby threatening the source of public revenues.” In order to promote sound growth and development, and to address the aforementioned blighted conditions, Urban Renewal Law allows for the “clearance, replanning, reconstruction, redevelopment, rehabilitation, restoration or conservation” of designated blighted areas.

The objectives of the Urban Renewal Plan are as follows:

- Eliminate blighting conditions, including: vacant and underutilized properties and buildings; deteriorated buildings; inadequate sidewalks, drainage, and sewerage infrastructure; incompatible land uses; and, aesthetic and visual detriments
- Promote compact, mixed-use development in proximity to the commuter rail station
- Encourage development that supports transit
- Encourage a diverse mix of higher density residential development, commercial, office and retail uses, entertainment and exhibition venues, and open spaces for workers, visitors, and residents
- Promote economic development opportunities
- Encourage a pedestrian-friendly environment and pedestrian-oriented commercial enterprises and consumer services that do not primarily rely on automobile traffic to bring consumers to the area
- Encourage flexibility in site and architectural design
- Maintain a consistently high level of design quality

A number of planning documents were reviewed in the Urban Renewal Plan with regard to the Ronkonkoma Hub to ensure that recommendations were consistent with the official goals and visions for the area. These planning documents include the Brookhaven 1996 Comprehensive Land Use Plan, Draft Brookhaven 2030 Plan,
The Urban Renewal Plan makes several recommendations with regard to land uses, zoning and other land use controls, building conditions and public improvements, most notably:

- Redevelopment with several multi-family residential buildings, mixed-use buildings potentially containing office, residential and retail uses, mixed-use buildings potentially containing commercial, exhibition, hospitality, institutional, and residential uses, retail and office buildings, as well as special use/entertainment venues.

- Implementation of a TOD Zoning District in order to facilitate the redevelopment as described above.

- All structures to be acquired and demolished with the exception of the existing MTA parking garage and potentially the train station.

- Improvements and upgrades to infrastructure, including roads, sidewalks, curbs, public hardscape and landscape, gas lines, water mains, electric distribution, stormwater runoff collection systems, street and walkway lighting, public parking areas, and an STP.

Based on the findings and recommendations of the Urban Renewal Plan, a Conceptual Land Use Plan was developed for the proposed redevelopment of the Ronkonkoma Hub area (see Figure 2). The Conceptual Land Use Plan provides a framework for the redevelopment of the Ronkonkoma Hub area in a transit-oriented manner, including higher density residential development, commercial, hospitality and conference uses, office uses, retail uses, entertainment and exhibition venues and institutional uses.

These uses are generally distributed on the Conceptual Land Use Plan in accordance with the subdistricts that have been defined in the TOD District, including the Neighborhood, Downtown Living, Marketplace and Main Street subdistricts. The Conceptual Land Use Plan depicts the maximum height (in stories and feet) permitted in each.

In total, the Conceptual Land Use Plan provides the maximum permitted development densities for each of the anticipated use types: a maximum of 1,450 dwelling units, approximately 195,000 square feet of retail space, approximately 360,000 square feet of office/medical space, and approximately 60,000 square feet of flex space (for hospitality, conference, exhibition, and/or residential uses).
Land Use and Implementation Plan

As part of this proposed action, the Town Board is considering the adoption of a Land Use and Implementation Plan for the proposed Ronkonkoma Hub area (see Appendix C). The Land Use and Implementation Plan was prepared as a result of the extensive planning process undertaken by the Town of Brookhaven for the redevelopment and revitalization of the 53.73±-acre area situated around the Ronkonkoma train station.

The Land Use and Implementation Plan provides an overview of the Ronkonkoma Hub area, the background and history of the Town's planning process, the proposed form-based code (FBC), and a redevelopment concept (Conceptual Land Use Plan) that illustrates the overall type and level of development that could take place with the application of the proposed FBC. The Land Use and Implementation Plan, among other things, examines the proposed TOD District, discusses SEQRA compliance and the environmental and public review process, and discusses the implementation strategy for realizing the Town's vision for the redevelopment of the Ronkonkoma Hub area.

As previously indicated, a Draft Land Use and Implementation Plan was analyzed as part of the 2010 DGEIS, which evaluated a theoretical maximum development scenario. Since support for the redevelopment of the Ronkonkoma Hub was evident from the DGEIS public hearing, the Town then sought private developer input, and ultimately issued a RFQ for a Master Developer.

Subsequently, a Blight Study and draft Urban Renewal Plan were prepared. The draft Urban Renewal Plan set forth uses and densities for the Ronkonkoma Hub area, as follows:

- A potential maximum of 1,450 multi-family residential dwelling units
- Approximately 195,000 square feet of retail space
- Approximately 360,000 square feet of office/medical space
- Approximately 60,000 square feet of "flex" space, to be utilized for conference, exhibition, hospitality, and/or residential uses

Ronkonkoma Hub Transit-Oriented Development District (TOD District)

The TOD District has been designed as an FBC. As indicated in the 2010 DGEIS, FBC zoning is different from conventional zoning in that it emphasizes building form and appearance rather than specifying bulk regulations. FBC zoning focuses on regulating the public realm, including street types, blocks, and civic spaces and provides for flexibility in use, site and architectural design. Form-based code zoning also includes an extensive use of graphics to illustrate, for example, the anticipated relationship of the building to the street or site.
The TOD District establishes objectives, policies, and standards to promote orderly development and redevelopment within the TOD District area for purposes of encouraging high-density mixed-use development, including housing, retail, entertainment, institutional and office uses. The overall intent of the TOD District is to encourage the efficient use of land, be a catalyst for revitalization, and foster a sense of place through development of a new transit-oriented, mixed use, pedestrian-friendly community.

The TOD District would also encourage redevelopment of vacant and/or underutilized, blighted properties, which would enhance the tax base and compliment the surrounding communities and uses as well as better utilize existing public transit infrastructure at Ronkonkoma Station through improved access and increased ridership.

Development within the Ronkonkoma Hub area would be governed by a “Regulating Plan” (see Appendix D and Figure 3). This Regulating Plan designates the subdistricts that comprise the TOD District and the various roadways within and adjacent to the subdistrict. With respect to approvals, the Planning Board would determine whether proposed development within the Ronkonkoma Hub area complies with the Regulating Plan and with the descriptions, building configurations and alignments, and other development parameters applicable to each of the subdistricts, as defined in the TOD District.
The subdistricts included within the TOD District are shown on the Regulating Plan (see Figure 3). These subdistricts convey the specific character that the Town wishes to achieve within the Ronkonkoma Hub area.

- Neighborhood Subdistrict (A) -- The Neighborhood Subdistrict is a predominantly residential area with medium-to-high density building types. It allows for a limited amount of ground floor commercial use and live/work units. It provides a transition between single-family homes and more compact mixed-use areas.

- Downtown Living Subdistrict (B) -- The Downtown Living Subdistrict is predominantly a mixed-use residential area with medium-to-high density building types. It allows for up to 50 percent commercial use.

- Marketplace Subdistrict (C) -- The Marketplace Subdistrict allows for predominantly retail-focused mixed-use, maintaining a high level of flexibility to attract diverse local and national retailers.

- Main Street Subdistrict (D) -- The Main Street Subdistrict is intended as predominantly a pedestrian-oriented, mixed-use town center. Regional shopping, entertainment, and outdoor dining uses are encouraged.

As shown on the Regulating Plan, Neighborhood Subdistrict A forms the northern perimeter (along Union Avenue) and the eastern perimeter of the Ronkonkoma Hub TOD area. Downtown Living Subdistrict B is located south of Union Avenue, adjacent to Hawkins Avenue and adjacent to Carroll Avenue. Another portion of Downtown Living Subdistrict B is located east of the Mill Road roundabout, north of the railroad tracks. Marketplace Subdistrict C is surrounded by Union Street to the north, Hawkins Avenue to the east, Garrity Avenue to the west and Railroad Avenue to the south. Finally, Main Street Subdistrict D forms the remainder of the Ronkonkoma Hub TOD area. The majority of Subdistrict D is located along the northern and southern sides of Railroad Avenue, from Ronkonkoma Avenue (with the exception of the area of Marketplace Subdistrict C) to Mill Road, and includes the train station and the existing parking garage. It also extends to the north along several new private streets and abuts Downtown Living Subdistrict B to the east and west (see Figure 3).

Each of the subdistricts is further broken down by maximum height in stories and maximum height in feet, as depicted on the Regulating Plan (see Figure 3). Specifically,

- Neighborhood Subdistrict (A) -- Maximum height of four stories, 70 feet, east of Carroll Avenue and maximum height of three stories, 56 feet west of Carroll Avenue

- Downtown Living Subdistrict (B) -- Maximum height of four stories, 70 feet
Engineering, Surveying and Landscape Architecture, P.C.

- Marketplace Subdistrict (C) -- Maximum height of three stories, 56 feet

- Main Street Subdistrict (D) -- Maximum height of five stories, 70 feet, with the exception of four blocks south of Railroad Avenue, which would have a maximum height of four stories and 60 feet

The Regulating Plan also provides additional development parameters (e.g., street types, principal and secondary frontages, and blocks).

Together with the Regulating Plan, development must also conform to street and roadway standards (including streetscape standards), outdoor space standards, and signage, lighting and parking regulations, as defined in the TOD District.

A more detailed discussion of the proposed TOD District is contained in Section 3.4.2 and Appendix D of this DSGEIS.

Change of Zone of Parcels within the Ronkonkoma Hub area to the TOD District

The TOD District, upon adoption by the Town Board, is proposed to be applied to the 54 individual tax parcels located within the 53.73±-acre Ronkonkoma Hub area. These parcels are listed below, and are shown in Figure 4.

Conceptual Master Plan
(Maximum Density Concept Plan)

A Conceptual Master Plan ("Maximum Density Concept Plan") has been prepared to conform to the parameters of the Regulating Plan (described above). The Maximum Density Concept Plan presented herein is not a specific development proposal, as it is not feasible to define the specific development of the entire 53.73± acres of the Ronkonkoma Hub area. Development is expected to take place over several years, and the specific uses and level of development would be dictated by market demand. However, review of the Maximum Density Concept Plan, which examines maximum potential development permitted within the Ronkonkoma Hub area, enables the Town Board to take a "hard look" at the relevant environmental impacts through the performance of a comprehensive environmental review pursuant to SEQRA and its implementing regulations at 6 NYCRR Part 617.

The Maximum Density Concept Plan presented in Figure 5, which is more fully detailed in the Conceptual Master Plan Package (dated October 11, 2013) in Appendix E, is based upon the conclusions of and the parameters (e.g., maximum development potential and the heights of the buildings) set forth in the Urban Renewal Plan, which will ultimately be codified on the Regulating Plan included in the TOD District. The Maximum Density Concept Plan includes the following program:

- 1,450 residential units
- 195,000 SF of retail
- 360,000 SF of office/medical
- 60,000 SF of flex space (including hospitality, conference and exhibition space, and/or residential units)

Total parking provided is 3,638 parking spaces, not including those spaces within the existing parking garage (1,043) and existing parking lot (341).

---

Footnotes:
7 For purposes of analysis, it was assumed that 50 percent of the units (725) would be rental and 50 percent (725) would be for-sale. The ownership and rental units would each be comprised of 50 percent one-bedroom units and 50 percent two-bedroom units. However, this was done solely for analysis purposes. Actual unit type and bedroom mix will be determined by market demand.
8 For purposes of analysis, it was assumed that 40,000 SF of the total 195,000 SF of retail space would be comprised of restaurants (1,080 seats). However, actual retail mix will be determined by market demand.
9 For purposes of analysis, it was assumed that of the total 360,000 square feet of commercial space, there would be 306,000 SF of general office space and 54,000 SF of medical office space. However, the actual mix of office and medical office space would be determined by market demand.
10 For purposes of analysis, the flex space has been considered to be a 120-room hotel. The actual use of this flex space will be determined by market demand.

Ronkonkoma Hub
Transit-Oriented Development
As demonstrated in Section 3.4.2 of this DSGEIS, the Maximum Density Concept Plan complies with the Regulating Plan, which depicts the locations of the subdistricts set forth in the TOD District, and describes the character to be achieved within each of the subdistricts. As illustrated on the Regulating Plan and as noted above, the predominantly residential subdistricts are located within the northern and eastern extents of the Ronkonkoma Hub area, which relates to the existing surrounding residential development, while the predominantly retail subdistrict is situated at the western extent of the Ronkonkoma Hub area, along Hawkins and Railroad Avenues. The Regulating Plan also depicts several different mixed-use subdistricts (the Marketplace and the Main Street Subdistricts), that allow greater building heights, generally situated closer to the railroad tracks and around the train station. The Maximum Density Concept Plan conforms to the Regulating Plan in terms of distribution of uses, heights and density of development (see Figure 5).
2.3 Comparison of Impacts

The following table provides a summary comparison of the impacts of the Theoretical Full Build Plan presented in the 2010 DGEIS and the maximum potential development under the TOD District, which is depicted on the Maximum Density Concept Plan evaluated in this DSGEIS. It should be noted that development potential was limited in the Theoretical Full Build Plan scenario presented in the 2010 DGEIS, as that scenario contemplated the construction of an STP on within the 53.73± Ronkonkoma Hub area. However, since the time of the acceptance of the DGEIS, Suffolk County has decided to form a sewer district and construct a plant on the south side of the LIRR tracks. Accordingly, there is more area available within the 53.73± acres that could accommodate development.

2.4 Purpose, Needs and Benefits

The purpose, needs and benefits of the proposed action have remained the same since the time of the 2010 DGEIS. Since the Town embarked on this planning initiative in 2007, the overall goal was, and remains, to revitalize the Ronkonkoma Hub area. The various actions that comprise the proposed action, which are contemplated herein, are consistent with the stated goals of the Ronkonkoma Hub Planning Study as they encourage the efficient use of land, provide for revitalization, and foster a sense of place through development of a new transit-oriented, mixed-use, self-sufficient community. The proposed action would also enhance the tax base through redevelopment of existing vacant/unoccupied parcels and new development by increasing the area’s marketability. The TOD District aims to encourage uses that complement the surrounding existing uses as well as better utilize existing public transit infrastructure at the Ronkonkoma Station. The Maximum Density Concept Plan draws upon the conclusions of the Urban Renewal Plan as a basis for the design plan, conforms to the proposed TOD District, and achieves the overall goals for the Ronkonkoma Hub area that have been set forth by the Town.
2.5 Project Schedule

A preliminary project schedule has been developed based upon the current status of the proposed action, as follows.

- Urban Renewal Area Designation: 3rd Quarter 2012 - 4th Quarter 2013
- SEQRA Approval and Change of Zone: 3rd Quarter 2012 - 4th Quarter 2013
- Road and Infrastructure Financing: 2nd Quarter 2012 - 2nd Quarter 2014
- Property Acquisition Process: 4th Quarter 2012 - 4th Quarter 2016
- Site Plan Approval Process: 1st Quarter 2013 - 4th Quarter 2017
- Vertical Development: 4th Quarter 2014 - 4th Quarter 2020
3.2 Water Resources and Sanitary Disposal

3.2.1 Existing Conditions

Groundwater

As noted in the 2010 DGEIS, the water table in the Ronkonkoma Hub area ranges from 45± feet to 48± feet amsl. As previously discussed, the elevation of the Ronkonkoma Hub area ranges from 92± feet to 111± feet amsl. Thus, depth to groundwater ranges from 47± feet to 63± feet below grade surface (bgs), from generally east to west. The groundwater flow direction in the area is generally to the south.

The site is located in Hydrogeologic Zone I: Deep Flow System (Magothy Recharge Area), according to the 208 Study and the Suffolk County Department of Health Services (SCDHS) Article 6 map. The relevant highest priority areawide alternatives for Zone I are as follows:

- Implement “Best Management Practices” to control runoff and remove nitrogen for treatment plants recharging effluent
- Restrict the use of inorganic fertilizers. Promote the use of low-maintenance lawns
- Control stormwater runoff to minimize the transport of nutrients, metals, sediments, organic chemicals
- Promotes water conservation to reduce overall demand on Long Island’s water supply

As indicated in the 2010 DGEIS, the Ronkonkoma Hub area is not situated within the boundaries of any Special Groundwater Protection Area (SGPA).

In order to protect the groundwater quality in Suffolk County, the SCDHS adopted Articles 6, 7 and 12 of the Suffolk County Sanitary Code (SCSC). A discussion of relevant provisions follows.

Article 6, Sanitary Density and Disposal

Pursuant to Article 6 of the SCSC, sewage discharge from on-site systems in Hydrogeologic Zone I is limited to 600 gallons per day per acre if an on-site sanitary system is used as the method of sanitary waste disposal. Thus, the maximum potential sanitary discharge to on-site sanitary systems for the 53.73±-acre TOD District is approximately 32,238 gallons per day. The Ronkonkoma Hub area is not currently within an area served by public sewers.
As explained on page 34 of the 2010 DGEIS, sanitary waste generated by properties within the Ronkonkoma Hub area is accommodated with individual on-site sanitary systems, as there is no public sewer service. As shown in Table 4, the total sanitary flow by existing land uses within the Ronkonkoma Hub area has been projected at 13,069 ± gpd, using SCDS design flow standards. It is important to note, for purposes of comprehensive analysis, the existing vacant developed properties were assumed to be occupied by uses permitted within the zoning district(s) in which they are situated.

1. Based on information from the Town of Brookhaven GIS Database, 2010.

**Article 7, Water Pollution Control**

The Ronkonkoma Hub area is located in a deep recharge area. As such, the storage of any restricted toxic or hazardous materials, as defined in the SCDS, would be regulated by the SCDS.

**Article 12, Toxic and Hazardous Materials Storage and Handling Controls**

Article 12, *Toxic and Hazardous Materials Storage and Handling Controls*, relates to the storage and handling of toxic and hazardous materials. Due to the nature of the existing uses within the Ronkonkoma Hub area (i.e., commercial/industrial properties), it is likely that underground and aboveground fuel oil storage tanks exist on many of the properties for the purpose of heating. As such, Environmental Data Resources, Inc. (EDR) was requested to provide a computerized database search of the Ronkonkoma Hub area (see Appendix E of the 2010 DGEIS). The search radius for each database was set at the ASTM-standard radius plus one-half mile. The database output was reviewed specific to the NYSDEC Petroleum Bulk Storage (PBS) database.

The database report also includes a summary of “Orphan” sites. Orphan sites are those sites where due to poor or inadequate address information the location of the property cannot be determined sufficiently for it to be included on the radius map. However, sites with similar street names or zip codes are summarized in the database report as these sites may present environmental risks to the subject
property. There were no listings for the project area within the Orphan Summary of the EDR database report.

The following sites were identified on the subject site to have been registered for above-ground and/or underground storage tanks (ASTs and/or USTs).

- **Ronkonkoma Lumber Company - 15 Hawkins Avenue**
  - One (1) 18,000-gallon No. 2 fuel oil UST installed in 1965 and removed in 1990
  - One (1) 25,000-gallon No. 2 fuel oil UST installed in 1965 and removed in 1990

- **Town Bus WE Transport, 14B Hawkins Avenue**
  - Two (2) 4,000-gallon gasoline UST installed in 1969 and removed in 1990
  - One (1) 5,000-gallon diesel UST installed in 1991
  - One (1) 275-gallon No. 2 fuel oil AST installed in 1980
  - One (1) 100-gallon kerosene AST installed in 1970 and removed in 1991
  - One (1) 275-gallon waste oil AST installed in 1991 and removed in 2001
  - One (1) 275-gallon motor oil AST installed in 1991 and removed in 2001
  - One (1) 2,000-gallon diesel AST installed in 1991 and removed in 2001
  - One (1) 275-gallon No. 2 fuel oil AST

- **Delfern Corporation, 6B Union Avenue**
  - One (1) 275-gallon waste oil AST removed in 1994

- **Whelen Automotive, 234 Carroll Avenue**
  - One (1) 275-gallon waste oil AST removed in 1991

- **Roadkill, 23 Hawkins Avenue**
  - One (1) 4,000-gallon gasoline UST installed in 1950 and removed in 1990
  - One (1) 1,000-gallon waste oil UST installed in 1950 and removed in 1990
  - One (1) 275-gallon No. 2 fuel oil AST

- **Affordable Cesspool, 49 Hawkins Avenue**
  - One (1) 4,100-gallon sulfuric acid AST

- **A1 Towing, 47 Hawkins Avenue**
  - One (1) 4,000-gallon gasoline UST installed in 1975 and removed in 1990
Two (2) 3,000-gallon gasoline USTs installed in 1975 and removed in 1990
One (1) 3,000-gallon gasoline UST installed in 1979 and removed in 1990

- KPW Enterprise, Inc., One Hawkins Avenue
  One (1) 3,000-gallon gasoline UST removed in 1985
  Two (2) 2,000-gallon gasoline USTs removed in 1985

- Tru Green Corporation, 66 Union Avenue
  One (1) 150-gallon industrial waste UST installed in 1982 and removed in 1992
  One (1) 6,400-gallon fertilizer AST removed in 1992
  One (1) 6,400-gallon methanol AST removed in 1992
  One (1) 1,200-gallon industrial waste AST installed in 1982 and removed in 1992

- William Mallins Cesspool, 54 Union Avenue
  Two (2) 4,000-gallon gasoline USTs installed in 1979 and removed in 1990
  One (1) 8,000-gallon diesel UST installed in 1979 and removed in 1990
  Two (1) 10,000-gallon sanitary waste USTs installed in 1979
  One (1) 4,000-gallon gasoline UST
  One (1) 10,000-gallon diesel UST installed in 1991
  One (1) 275-gallon waste oil AST installed in 1978 and removed in 2000

- Ronkonkoma Wheel Alignment, 54 Union Avenue
  One (1) 275-gallon waste oil AST installed in 1979 and removed in 1991

Although the EDR database indicates that the majority of the sites have removed tanks, Article 12 of the SCSC does not require registration of tanks with a combined capacity less than 1,100-gallons. As such, it is likely that there are unregistered USTs and/or ASTs within the project area that would require removal. More specifically, heating oil tanks are likely present on the residential parcels and commercial properties where natural gas is not utilized.
Water Usage

As indicated on page 32 of the 2010 DGEIS, potable water is supplied by the SCWA. As explained in the 2010 DGEIS (pages 32-33) and shown in the table below, the existing water usage by land uses within the Ronkonkoma Hub area is projected at approximately 14,375 gpd, including a 10 percent factor for water not entering the sanitary system (e.g., irrigation).

</tbody>
</table>

1. Based on information from the Town of Brookhaven GIS Database, 2010.
2. Based upon Suffolk County sewage design flow standards.

There are six-inch, eight-inch and 12-inch public water mains owned by SCWA that serve the area within the Ronkonkoma area.

Stormwater Runoff

As discussed in the 2010 DGEIS, several drywells exist on each of the LIRR paved parking areas in order to accommodate stormwater runoff. Drywells also exist on most of the commercial and industrial properties throughout the Ronkonkoma Hub area. Stormwater from existing roadways is discharged to subsurface leaching structures.

Surface Water, Wetlands and Floodplains

As indicated in the 2010 DGEIS, there are no surface waters on or adjoining the Ronkonkoma Hub area. There are no regulated freshwater wetlands on or adjoining...
the TOD District. The Ronkonkoma Hub area is not situated proximate to any tidal wetlands. Furthermore, Ronkonkoma Hub area is not located within a 100-year or 500-year flood zone.

3.2.2 Potential Impacts

Groundwater

The Long Island Comprehensive Waste Treatment Management Plan

As noted in the 2010 DGEIS, the Ronkonkoma Hub area is located in Hydrogeologic Zone I, which is characterized as a deep flow, Magothy Recharge Area. In order to ensure the protection of groundwater, future site-specific development applications in accordance with the TOD District would be required to comply with the relevant recommendations of the "Wastewater Management Alternatives" and the "Highest Priority Areawide Alternatives" of the 208 Study.

As explained in Section 4.2.1 of the 2010 DGEIS, the first relevant recommendation is to implement best management practices to control runoff and remove nitrogen for treatment plants recharging effluent. A companion recommendation is to control stormwater runoff to minimize the transport of contaminants. In compliance with this recommendation, to control runoff, all site-specific applications would be subject to compliance with the Town's stormwater ordinance (Chapter 86 of the Town Code). Stormwater would be contained and recharged on the site through the use of leaching pools, which are proper drainage methods. The installation of adequate drainage structures and the regrading of sites to direct stormwater would minimize the transport of sediments, nutrients, metals, organic chemicals and bacteria to ground and surface waters.

With respect to sanitary discharge, as explained in greater detail below, Suffolk County is proposing to establish a sewer district and construct a sewage treatment plant on the south side of the LIRR tracks (which location was examined as an alternative in the 2010 DGEIS) that would handle sanitary flow from development within the Ronkonkoma Hub area. That sewage treatment plant would remove nitrogen before recharge to groundwater.

The next recommendation is to restrict the use of inorganic fertilizers, and promote the use of low-maintenance lawns. To comply with this recommendation, development within the Ronkonkoma Hub would be required to incorporate indigenous species, to the maximum extent practicable, to encourage a low-maintenance landscape.

The final relevant recommendation is to promote water conservation to reduce overall demand on Long Island's water supply. In compliance with this
recommendation, water conservation methods would be used to the maximum extent practicable to decrease overall water usage.

Based upon the foregoing, implementation of the proposed action, including development in accordance with the Maximum Density Concept Plan, would comply with the recommendations of the 208 Study and would minimize impacts to groundwater resources to the maximum extent practicable.

**Article 6. Sanitary Density and Disposal**

The Ronkonkoma Hub area is situated within Groundwater Management Zone I. Pursuant to Article 6 of the SCSC, the maximum permissible flow for this area is 600 gallons per day per acre or approximately 32,238 gallons per day (based on 53.73± acres) if an on-site sanitary system is used as the method of sanitary waste disposal. All sanitary waste generated by new development within the TOD District area is proposed to be accommodated by a new STP to be constructed by Suffolk County, south of the railroad tracks, south of the eastern extent of the Ronkonkoma Hub area (see discussion below). Thus, the sanitary density limitations are not applicable to the development in conformance with the TOD District.

As indicated in Section 3.2 of this DSGEIS, the Ronkonkoma Hub area is located in Groundwater Management Zone I. In this zone, the maximum allowable sewage flow is 600 gallons per acre per day without formal sewage treatment with nitrogen removal. Sewage generated by the Theoretical Full Build Plan analyzed in the 2010 DGEIS (approximately 169,000 gpd) was greater than the 32,328 gpd of allowable flow for this area, and, therefore formal sewage treatment including nitrogen removal was required. The Theoretical Full Build Plan included the construction of an STP with a capacity of 275,000 gpd, within the boundaries of the Ronkonkoma Hub area. The 275,000-gallon capacity would have accommodated the Theoretical Full Build Plan as well as connection of existing uses to remain and/or redevelopment and connection of parcels not specifically identified in the Theoretical Full Build Plan.

Since the DGEIS was accepted and the public hearing held, the development potential of the Ronkonkoma Hub area has changed. The projected sanitary flow for the development program depicted on the Maximum Density Concept Plan (and based upon the assumptions outlined in Footnotes 3 through 5 regarding the number of restaurant seats, medical office space and hotel rooms) has been calculated using Suffolk County sewage design flow standards, and is shown on the following table.
Table 6 - Projected Sanitary Flow: Development Under Maximum Density Concept Plan

</table>

As this flow, like the Theoretical Full Build plan evaluated in the DGEIS, exceeds the allowable population density equivalent of 32,328 gpd for on-site systems (as described above), connection to an STP is required.

Suffolk County is currently proposing to establish a sewer district and construct a STP on a 7.74-acre property, south of the LIRR tracks, opposite the southeastern portion of the Ronkonkoma Hub area. As part of the development of the new STP, the County is proposing to form a new sewer district, which will include the Ronkonkoma Hub area. The formation of this district is regulated by County Law Article 5-A, Sections 253, 254 and 256A. As part of district formation, the County will conduct an environmental review process in accordance with SEQRA and its implementing regulations. Once SEQRA and other required reviews are completed, formation of the sewer district is expected to occur between 2014 and 2015 and construction is anticipated to be completed by December 2015.

The proposed STP development includes plans for the construction of a sanitary wastewater collection system and associated treatment facilities. According to the draft Ronkonkoma Hub STP Engineering Report (March 2013) (hereinafter the "STP Engineering Report") prepared by Cameron Engineering & Associates, LLP (consultant to the Suffolk County Department of Public Works [SCDPW]), the property on which the STP is proposed to be constructed is bounded by Railroad Avenue to the south, Long Island MacArthur Airport to the east, a LIRR parking lot to the west and six MTA-owned lots to the north.

The new treatment plant will be sized with an initial capacity of 500,000 gpd with the ability to expand to 750,000 gpd on the site. The treatment facility will feature the sequence batch reactor (SBR) technology for nitrogen reduction. The capacity was established based upon the approximately 400,000 gpd anticipated for future development within the Ronkonkoma Hub area, plus an additional 100,000 gpd for future connections in the Town of Islip, including, for example, potential future connections to MacArthur Airport. In addition, provisions for an additional 250,000 gpd (for a total capacity of 750,000 gpd) are being considered to accommodate potential future growth within the sewer district.
According to the draft *STP Engineering Report*, if possible, the design will incorporate LEED (Leadership in Energy and Environmental Design) principles in the treatment processes as well as the buildings and site. Also, a high quality effluent suitable for reuse can be produced by the facility if it is determined that there is a local need.

The treated wastewater is proposed to be disposed of on-site via subsurface leaching pools. The leaching field has been designed for an initial 172 leaching pools with an expansion area for an additional 60 pools.

The following tables, reproduced from the draft *STP Engineering Report* (with additional notes), present the expected influent characteristics and the expected effluent requirements. The values shown on Table 7 represent typical influent concentrations from mixed-use developments in Suffolk County. The proposed facility will not accept scavenger waste or leachate. Also, wastewater from any industrial sources will be pretreated prior to discharge to meet County pretreatment standards. However, it should be noted that the proposed TOD District does not permit any new industrial uses within the Ronkonkoma Hub area. Table 8 provides the anticipated effluent limitations to be defined in the State Pollutant Discharge Elimination System (SPDES) permit that is ultimately issued for this facility. Notes have been added to these tables to provide definitions of uncommon parameters.

(1) Total dissolved solids
According to the draft *STP Engineering Report*, it is the experience of the County that since the treatment system is located indoors, odor control may not be necessary. However, provisions for odor control, including allocation of space and installation of support utilities will be provided in the initial facility construction. If, in the future, an odor control system is warranted, the County will make the necessary improvements. Furthermore, the SCDHS requires enclosed treatment plants to account for proper ventilation, odor control and noise attenuation in accordance with best engineering practices. Therefore, potential odors and noise from the STP would not have a significant adverse impact on the surrounding community, including the properties within the Ronkonkoma Hub.

As future development within the Ronkonkoma Hub area would be connected to a new STP and effluent generated would meet parameters set forth in the STP's SPDES permit (an application for which was submitted to the NYSDEC, and which permit is currently pending), there would be no significant adverse impact to groundwater resources resulting from sewage disposal from the redevelopment of the Ronkonkoma Hub area.

**Article 7. Water Pollution Control**

Should the storage of any restricted toxic or hazardous materials, as defined in the SCSC, occur in the future for which a permit is required, an applicant would be required to apply for such Article 7 permit from the SCDHS. Compliance with the Article 7 regulations would assist in ensuring that there would be no significant adverse impacts to groundwater quality.

**Article 12. Toxic and Hazardous Materials Storage and Handling Controls**

It is expected that the natural gas would be used for heating and cooling purposes, and National Grid has previously confirmed its ability to supply natural gas to the Ronkonkoma Hub area. In the event that properties within the Ronkonkoma Hub area do not connect to natural gas, an Article 12 permit from the SCDHS may be required.

The requirement for an Article 12 permit relates to the storage of fuel oil in above ground or underground storage tanks. All redevelopment of properties within the Ronkonkoma Hub area, in accordance with the proposed TOD District, where underground or above ground storage tanks are proposed in quantities with a combined capacity greater than 1,100-gallons, would be required to secure the appropriate permits under Article 12 from the SCDHS. Compliance with these regulations would help ensure that no significant adverse impacts to groundwater would result from tank installation and operation.
At the time of acquisition and/or development, the applicant will perform site specific environmental investigations to confirm environmental conditions, to determine the presence of tanks within the individual properties and to remediate such environmental conditions, as required.

**Water Usage**

Utilizing the SCDHS design sewage flow rates as the basis for estimating potable water requirements, the domestic water use for development in accordance with the Maximum Density Concept Plan would be approximately 400,000 gpd (see Table 6). With an additional 10 percent of water estimated for irrigation and domestic uses not entering the STP, the total projected potable water demand for development in accordance with the Maximum Density Concept Plan is approximately 440,000 gpd.

Consultations were undertaken with the SCWA to evaluate the available infrastructure in the area and to identify any necessary upgrades required to meet the water demand. According to correspondence from Herman J. Miller, PE, Deputy CEO for Operations, dated June 27, 2013 “based on current conditions, SCWA can provide the volume of water required for domestic water service and fire protection” (see Appendix F of this DSGEIS). Furthermore, Mr. Miller indicated that the required distribution system “improvements can be installed under our standard SCWA contracts.” The letter also acknowledges the potential need for on-site systems to provide the pressure required for certain structures.

Based on the foregoing analyses, there would be sufficient water supply to serve the anticipated future development under the Maximum Density Concept Plan with respect to both domestic and fire protection needs. With respect to fire flow, in the event that the SCWA’s system pressure is not adequate to serve the higher floors of the buildings, a booster pump system would be installed by the Master Developer.

**Nonpoint Source Management Handbook**

The *Nonpoint Source Management Handbook* was reviewed as to recommendations related to the proposed action. Discussion of the proposed project’s consistency with the relevant recommendations follows:

**Land Use**

*Limit new development, particularly industrial uses, in the deep recharge and critical shallow recharge areas.*

Although the subject parcel is located in a deep recharge area, the proposed TOD District does not permit construction of new industrial uses. The purpose of the proposed action is to facilitate the redevelopment of underutilized or vacant parcels.
within the TOD District with residential, retail, office, restaurant uses and hospitality and entertainment uses. Thus, the proposed project complies with this recommendation.

Limit the removal of natural vegetation and the creation of lawn areas.

The majority of the properties identified for redevelopment in accordance with the Maximum Density Concept Plan are sites that are paved or otherwise impervious with weedy vegetation. Other areas of the Ronkonkoma Hub area are largely comprised of ecological communities that are considered to be demonstrably secure within New York State by the NYNHP, including Mowed Lawn, Mowed Lawn with Trees and Flower Herb Garden. These are all common in the general surrounding area of the site.

There are areas within the Ronkonkoma Hub area that contain Successional Southern Hardwoods and Successional Shrubland (see Section 3.3 of this DGEIS). However, both communities exist as a result of past clearing or other anthropogenic disturbance, and support a variety of invasive/non-native vegetation. There is also a small area of Pitch Pine-Oak Forest located on the eastern portion of the TOD District area. However, due to the small size of the parcel and the presence of invasive/non-native species in perimeter areas, the parcel does not support a large, undisturbed block of interior woodland habitat.

Although site specific landscaping plans have not yet been developed, the creation of lawn areas are expected to be limited on most building sites to building perimeters and planting areas along the road frontage and site interiors. The designated outdoor space, including public plazas, would be provided as indicated in the TOD District, such that these areas do not constitute less than five percent of the total buildable lot area covered by the proposed site plan application and all previously-approved site plans in the Ronkonkoma Hub TOD District. Future development would comply with this recommendation.

Stormwater Runoff

Minimize grade changes and site clearing. Preserve swales in their natural state. Avoid disturbance of existing grades, vegetation or soils and the alteration of surface hydrology.

The topography of the TOD District area is relatively flat, and thus, there would be no significant changes in grade of properties within the TOD. The only exception is excavation and grading associated with the construction of underground parking garages.

Also, the majority of the properties identified for redevelopment are sites that are paved or otherwise impervious with weedy vegetation. Overall surface hydrology would not, therefore, significantly change. The redevelopment of properties would
require minimal grading to direct stormwater into on-site drainage structures. As part of the Town's stormwater ordinance, all stormwater would be required to be contained and recharged on-site. There are no swales within the Ronkonkoma Hub area. Overall, while minimal grade changes would be required for site redevelopment, drainage would be provided to minimize potential adverse impacts associated with stormwater runoff. As such, the project complies with the intent of this recommendation.

Provide temporary on-site areas to receive stormwater runoff flows that are generated by construction and other site development activities. Do not allow increased sediment resulting from the construction or operation phase of site development to leave the site or to be discharged into stream corridors, marine or freshwater wetlands. Minimize the amount of soil area exposed to rainfall and the period of exposure. Cover or plant exposed soils as soon as possible.

In accordance with Town’s stormwater ordinance requirements, a stormwater pollution prevention plan would be required before any land development activity is undertaken. Pursuant to §86-6(8)(1), the stormwater pollution prevention plan is required to contain, among other things, “temporary and permanent structural and vegetative measures...for soil stabilization, runoff control and sediment control for each stage of the project from initial land clearing and grubbing to project close-out.” As such, the proposed action complies with this recommendation.

Detain runoff and direct stormwater from road surfaces to sediment basins before discharge to a sump wherever topography limits or precludes on-site recharge.

As previously noted, the topography of the Hub area is relatively flat. Therefore, on-site leaching structures are feasible methods of stormwater control. Stormwater from road surfaces would be handled with a leaching basin system, as described below. Thus, this recommendation is not applicable to the proposed action, as on-site recharge is feasible.

Stabilize exposed slopes during and after construction by using temporary and/or permanent structural or nonstructural stabilization measures.

If areas within the Ronkonkoma Hub are proposed to be regraded to create slopes in excess of 10 percent, slope stabilization methods during and after construction would be required in accordance with Town Code. As such, the proposed action complies with this recommendation.

Fertilizer

Retain as much of the natural vegetation of the site as possible. Minimize grade changes and site clearing.
As indicated earlier, the majority of the properties identified for redevelopment are sites that are paved or otherwise impervious with weedy vegetation. Little natural vegetation currently exists within the Ronkonkoma Hub area.

Grade changes would not be expected to be significant due to existing conditions (i.e., sites are primarily developed and the topography is relatively flat). As such, the project complies with the intent of this recommendation.

*Use native plants for the planting of areas that have been disturbed by grading. Consider the use of alternative types of groundcover and other plant materials to avoid or reduce lawn area and the consequent need for fertilizer applications, extensive watering and maintenance.*

In conformance with this recommendation, native and low-maintenance species would be planted to the maximum extent practicable.

**Stormwater Runoff**

Development is subject to Chapter 86 of the Town of Brookhaven Town Code entitled *Stormwater Management and Erosion Control.*

**Stormwater Runoff and Management During Construction Activities**

As the various components of the future development (whether public infrastructure or individual development blocks) are designed for construction, the applicant(s) will be required to develop plans to address compliance with Chapter 86 of the Town Code (Storm Water Management and Erosion Control), as well as the NYSDEC SPDES General Permit for Storm Water Discharges from Construction Activities (GP-0-10-001). As it is likely that development will proceed in phases over a number of years, it is not possible at this time to provide one overall plan for erosion and sediment control during construction; individual site plan applications would require detailed plans prior to approval, and would be designed in conformance with prevailing regulations.

All individual construction projects within the development (e.g., construction of all or portions of the public roads and infrastructure or construction of individual development blocks) will be required to prepare Erosion and Sediment Control Plans to detail measures needed to control erosion and prevent sediment-laden storm water from leaving the site(s) during construction. Should it be determined that the development as a whole or any part of the overall development plan has the potential to discharge to surface waters, the applicant(s) will also be required to prepare full Storm Water Pollution Prevention Plans, including water quality and quantity control components, which will be submitted to the Town for approval.
Thus, as plans would be required to be prepared in accordance with the Town Code and relevant NYSDEC regulations, no significant adverse impacts associated with stormwater runoff or erosion and sedimentation during construction are expected.

**Post-Development Stormwater Runoff Management**

Stormwater runoff generated within each of the individual private development blocks will be required to be collected and recharged on-site, in accordance with current Town site plan requirements and Chapter 86 of the Town Code. Therefore, the storm drainage addressed herein is limited to the runoff generated from and collected in the proposed public rights-of-way.

In accordance with Town standards for subdivision roadway improvements, a leaching basin system is proposed for each of the individual tributary areas within the public rights-of-way. Each leaching basin system consists of a series of eight-foot-diameter precast concrete drywells, supplemented with precast concrete catch basins where necessary for efficient collection of surface runoff, and 12-inch reinforced concrete interconnecting pipe. Each individual system is designed to store the runoff from a five-inch rainfall. The *Preliminary Grading, Drainage & Utility Plans* (see Appendix E) depict the layout of each of the leaching basin systems in conjunction with the other utilities located in the public roadways.

Therefore, as the stormwater systems will be designed to collect and recharge runoff in accordance with Town requirements, no significant adverse impact with respect to stormwater runoff is anticipated.

**Surface Water, Wetlands and Floodplains**

Since the Ronkonkoma Hub area does not contain surface waters or wetlands, and is not located within a flood zone, implementation of the proposed action will not impact same.

---

### 3.2.3 Proposed Mitigation

In order to ensure that impacts to groundwater and surface water resources are minimized, and to minimize the impacts associated with stormwater runoff, the following mitigation measures are proposed:

- Sanitary waste from newly-developed/redeveloped parcels within the Ronkonkoma Hub area will be accommodated by the proposed off-site STP being developed by Suffolk County, and, therefore, would conform to the prevailing regulations of the Suffolk County Sanitary Code. Moreover, the NYSDEC will establish discharge limits in accordance with the permit.
ultimately issued for the STP. These measures will help mitigate potential impacts to groundwater from the sewage effluent generated by development within the Ronkonkoma Hub area.

- Parcels developed or redeveloped within the Ronkonkoma Hub area will implement water conservation measures, including low-flow fixtures, low-flow toilets, and/or drip irrigation.

- Parcels developed or redeveloped within the Ronkonkoma Hub area are required to comply with Chapter 86 of the Town Code, *Storm Water Management and Erosion Control*.

- Parcels developed or redeveloped within the Ronkonkoma Hub area will use native or low maintenance plantings, to the maximum extent practicable, to reduce irrigation needs and fertilizer demand. These measures will mitigate potential impacts to water quantity and quality.
FINAL GENERIC ENVIRONMENTAL IMPACT STATEMENT

TOWN BOARD OF THE TOWN OF BROOKHAVEN
PROPOSED RONKONKOMA HUB TRANSIT-ORIENTED DEVELOPMENT (TOD)
HAMLET OF RONKONKOMA, TOWN OF BROOKHAVEN, SUFFOLK COUNTY

PROJECT LOCATION: 53.73 acres

1.0 Introduction

This document is a Final Generic Environmental Impact Statement (FGEIS), which has been prepared to respond to comments on both the Draft Generic Environmental Impact Statement dated September 2010 (2010 DGEIS) and the Draft Supplemental Generic Environmental Impact Statement dated November 2013 (DSGGEIS) for the proposed action.

The proposed action consists of several Town Board actions that would culminate in the redevelopment of the Ronkonkoma Hub area, which consists of 53.73± acres, generally bounded by Union Avenue and Union Street to the north; Village Plaza Drive to the east; Ronkonkoma Avenue, Garrity Avenue and Hawkins Avenue to the west; and the railroad tracks of the Metropolitan Transit Authority (MTA) Long Island Railroad (LIRR) to the south, in the hamlet of Ronkonkoma, Town of Brookhaven, Suffolk County (see Figure 1).
As described in detail in the DSGEIS, the proposed action specifically consists of the following:

- Adoption of an Urban Renewal Plan
- Adoption of a Land Use and Implementation Plan
- Adoption of a Transit Oriented Development (TOD) District
- Change of zone of parcels within the Ronkonkoma Hub area to the TOD District
- Approval of a Conceptual Master Plan ("Maximum Density Concept Plan")

By way of history and as more fully described in the aforesaid 2010 DGEIS and DSGEIS, the Town Board has been working with the community for approximately seven years to revitalize the Ronkonkoma Hub area. The Town of Brookhaven completed a two-phased planning study to revitalize the Ronkonkoma Hub area, known as the Ronkonkoma Hub Planning Study. The Town also prepared the Draft Ronkonkoma Hub Transit-Oriented Development Land Use and Implementation Plan and a Draft Generic Environmental Impact Statement, which evaluated a theoretical maximum development scenario. Examination and evaluation of, among other things, a theoretical maximum development scenario enabled the Town Board to conduct a comprehensive environmental review of the overall proposed action and take a "hard look" pursuant to the State Environmental Quality Review Act (SEQRA) and its implementing regulations at 6 NYCRR Part 617.

The Town of Brookhaven Town Board, serving as lead agency, accepted the 2010 DGEIS on September 21, 2010, and a public hearing was held on October 19, 2010. The public comment period on the 2010 DGEIS was closed on October 29, 2010. It was clear from the comments received that there was much community support for the proposed action (see Appendix E of this FGEIS).

Subsequent to the public hearing on the 2010 DGEIS, the Town of Brookhaven, in an effort to ensure that the planning efforts would result in the actual redevelopment of the Hub area, decided to seek private developer input. The Town issued a Request for Expressions of Interest (RFEI) and ultimately a Request for Qualifications (RFQ) for a Master Developer. Upon review of preliminary plans received as part of the RFEI and RFQ processes, the Town of Brookhaven prepared The Ronkonkoma Hub Study Area Blight Study (Blight Study), which ultimately resulted in the preparation of an Urban Renewal Plan for the Ronkonkoma Hub area. The densities recommended in the Urban Renewal Plan were different than those originally evaluated in the 2010 DGEIS, as such an updated Environmental Assessment Form was prepared by the Town Board, and a Positive Declaration indicating the need to prepare a supplemental draft environmental impact statement was adopted on October 1, 2013. Thus, to ensure complete and comprehensive environmental review in accordance with SEQRA and its implementing regulations at 6 NYCRR Part 617, the Town of Brookhaven prepared an DSGEIS to identify and evaluate potential significant adverse environmental impacts that may differ from those evaluated in the 2010 DGEIS, in accordance with 6 NYCRR §617.9(a)(7), which states:

"(7) Supplemental EISs.
(i) The lead agency may require a supplemental EIS, limited to the specific significant adverse environmental impacts not addressed or inadequately addressed in the EIS that arise from..."
(a) changes proposed for the project; or
(b) newly discovered information; or
(c) a change in circumstances related to the project.

(ii) The decision to require preparation of a supplemental EIS, in the case of newly discovered information, must be based upon the following criteria:
(a) the importance and relevance of the information; and
(b) the present state of the information in the EIS.

(iii) If a supplement is required, it will be subject to the full procedures of this Part."

As the maximum potential development being considered for the Ronkonkoma Hub area, as defined in the Urban Renewal Plan, is greater than that evaluated in the 2010 DGEIS, the DSGEIS was prepared to address potential changes in impacts that would result from the modified proposed action.

The Town of Brookhaven Town Board, serving as lead agency, accepted the DSJEIS on November 12, 2013, and a public hearing was held on January 9, 2014. The public comment period on the DSJEIS closed on February 10, 2014. As with the 2010 DGEIS hearing and public comment period, support for this modified proposed action was evident (see Appendices A and C of this FGEIS).

In accordance with 6 NYCRR § 617.9(b)(8):

A final EIS must consist of the draft EIS, including any revisions or supplements to it; copies or a summary of the substantive comments received and their source (whether or not the comments were received in the context of a hearing); and the lead agency’s responses to all substantive comments. The draft EIS may be directly incorporated into the final EIS or may be incorporated by reference. The lead agency is responsible for the adequacy and accuracy of the final EIS, regardless of who prepares it. All revisions and supplements to the draft EIS must be specifically indicated and identified as such in the final EIS.

As evidenced by review of comments provided on both the 2010 DGEIS and the DSJEIS (see Appendices A through B of this FGEIS), the vast majority of comments received were in support of the Town’s efforts and the proposed action. Accordingly, while these comments are included in the aforementioned appendices, they are not “substantive comments” as contemplated in 6 NYCRR §617.9(b)(8).

The remaining sections of this FGEIS are organized as follows:

- Section 2.0 - List of Commentators and Comment Letters in Support from DSJEIS Hearing of January 9, 2014 and Associated Public Comment Period
- Section 3.0 - Responses to Substantive Comments Raised from DSJEIS Hearing of January 9, 2014 and Associated Public Comment Period
- Section 4.0 - Responses to Substantive Comments Raised from 2010 DGEIS Hearing of October 19, 2010 and Associated Public Comment Period
- Section 5.0 - Conditions and Criteria Under Which Future Actions Will Be Undertaken or Approved Including Requirements For Subsequent SEQRA Compliance.

Introduction
Section 2.0 of this FGEIS provides a list of each comment received in support of the proposed action, whether by letter or by statement at the associated public hearing. In the situation where comments in support also included a question, such question is addressed in the associated Response to Comments section.

Section 3.0 of this FGEIS sets forth each substantive written or verbal comment made on the proposed action, and provides a response to each substantive comment.

Section 4.0 of this FGEIS sets forth each substantive written or verbal comment period made on the previously-proposed action and provides a response to each substantive comment.

Section 5.0 sets forth the conditions and criteria under which future actions will be undertaken or approved including requirements for subsequent SEQR compliance pursuant to 6 NYCRR §617.10(e).
2.0

List of Commentators and Comment Letters in Support from DSGEIS Hearing of January 9, 2014 and Associated Public Comment Period

2.1 Written Support Comments

As explained in Section 1.0, the majority of comments received on both the 2010 DGEIS and the DSGEIS were in support of the Town’s efforts and the proposed action. The comments in support are not "substantive comments" as contemplated in 6 NYCRR §617.9(b)(8).

This section of the document provides a list of each written comment received in support during the comment period on the DSGEIS. In the situation where comments in support also included a question, such question is addressed in the associated Response to Comments section.

Written comments have been coded with the letter “C,” and each individual letter received has been numbered. For petitions received in support of the proposed project, the individuals have been grouped. The written comments received in support of the proposed project are included in Appendix A of this PGEIS and each comment letter includes the corresponding comment number below. A list of the coded written comments on the DSGEIS follows:

C1 - Petitions in Support

C2 - Jason Virtin
2.2 Verbal Support Comments at DSGEIS Public Hearing of January 9, 2014

This section of the document provides a list of each comment received in support during the public hearing on the DSGEIS. In the situation where comments in support also included a question, such question is addressed in the associated Response to Comments section.

As with the written comments, each person commenting during the public hearing has been assigned a number in the order in which each comment was received and is preceded with the letter “H.” The DSGEIS Public Hearing transcript in Appendix B of this FGEIS includes the comment number. A list of the coded comments from the DSGEIS public hearing follows:

H2 – Amy Engle, Executive Director of Sustainable Long Island

H3 – Marianne Garvin, President and CEO of the CDC Development Corporation of Long Island

H5 – Phil Sorrentino

H6 – Steve Jensen, Chairman of the Long Island Builders Institute (LIBI) Community Outreach Committee

H7 – Debbie Davey

H8 – Lenney Minervini, LIBI Member

H9 – William Hubbs

H10 – Brian Boker
H11 – Larry Davis, Chairman of LIBI

H12 – Denise Schwartz, President of the Ronkonkoma Chamber of Commerce

H13 – Edward Enders, Council Representative for the Northeast Regional Council of Carpenters

H14 – Rita Passegio

H15 – Kevin Law, President and CEO of the Long Island Association

H16 – Mario Mattera, Plumbers Local 200

H17 – Grant Hendricks, LI Contractors Association

H18 – Nick Dalvano

H19 – Vince Lancelli

H21 – Thomas Herron, Northeast Regional Council of Carpenters

H22 – Dale Spencer, Curator, Lake Ronkonkoma Historical Society

H23 – Elissa Ward Kyle, Sustainability Director, Vision Long Island

H24 – Artie Cipoletti

H25 – Jim Mergo

H26 – Charles Barredo

H27 – Lois Frickie

H28 – Cara Longworth, Executive Director of the Long Island Regional Planning Council

H30 – Bud Cipoletti

H31 – George Schramm, President of the Lake Ronkonkoma Civic Association

List of Commentators and Comment Letters in Support from DSGEIS Hearing of January 9, 2014 and Associated Public Comment Period
H32 - David Kapell, Rauch Foundation

H36 - Dawn Hopkins, Vice President of the Lake Ronkonkoma Civic Association

H39 - Jennifer Appel, General Counsel/Program Advisor for the Long Island Housing Partnership

H40 - Robert Morano.
2.3 Other Verbal Support
Comments at Town of Islip
Public Forum of February 5, 2014

This section of the document provides a list of each comment received in support during the Town of Islip's public forum on the Ronkonkoma Hub Transit-Oriented Development District held on February 5, 2014. In the situation where comments in support also included a question, such question is addressed in the associated Response to Comments section.

As with the written comments, each person commenting during the public forum has been assigned a number in the order in which each comment was received and is preceded with the letter “F.” The public forum transcript is included in Appendix D of this PGEIS includes the corresponding comment number.

A list of the coded comments from the Town of Islip public forum follows:

F10 - Artie Cipoletti
F11 - Bud Cipoletti
F12 - Chris Ragusa
F23 - Kevin Harvey
F26 - James Pena
F27 - Michal Perez
F28 - Bob French
F30 - Mario Mattera
F33 - Thomas Herron
F48 - Joe Montalbano
F49 - Nick Delvano.

Responses to Substantive Comments Raised from DSGEIS Hearing of January 9, 2014 and Associated Public Comment Period

3.1 Written Correspondence

WILLIAM HILLMAN, P.E., CHIEF ENGINEER
DANIEL J. DRESCH, JR.
COUNTY OF SUFFOLK
January 16, 2014

Comment C7-1:

Ronkonkoma Avenue is System Road 29 not County Road 29. It is owned and maintained by the Town of Brookhaven and the Town of Islip.

\(3A\) blank comment form was submitted by Karen Gribbin (225 Smith Street, Central Islip) during the Town of Islip public forum held on February 5, 2014. Accordingly, her participation is acknowledged, but there was no substantive comment to address.
Response C7-1:
The comment is noted.
Comment C12-6:

The adverse discriminatory effects of the TOD is amplified by the fact that it was proudly announced by the Town that the designated developer had apparently acquired or obtained commitments for those properties inside “Phase 1”. Phased or staged development of the 54 acres does not seem to have been either addressed or fully considered in any of the documentation in relation to the TOD, Implementation Plan, Urban Renewal Plan or, for that matter, the DSGEIS.

To the extent it can be ascertained, it appears that Phase I encompasses the proposed apartments at the eastern end of the Ronkonkoma Hub area. Yet, in the absence of sewers or other sanitary disposal facilities, the construction of apartments would appear to be impermissible under the requirements of the Suffolk County Department of Health. It is noted that a Sewer Treatment Plant (STP) is the subject of consideration and implementation by the County of Suffolk, which is plainly not limited to this project. The sewers being considered are intended to service the entire area, including various portions of Islip. While it is my understanding that studies have been undertaken for the implementation of this sewer project and the construction of a STP, no funding has been specifically appropriated or bonding issued. While the designated developer is likely to be contributing to the construction of a STP, there does not seem to have been any “hard look” consideration of when, or even if, this STP will be constructed or how it can be feasibly financed consistent with the economic viability of both Islip and Brookhaven.

Further, it is our understanding that the construction status of the STP itself may be questionable and that as a possible alternative, the County is considering connection to the already existing Southwest Sewer District facilities to serve the proposed project. This, of course, is a facility which should also be equally available to the current owners in formulating their development plans. It’s [sic] availability should not be limited to the Designated Developer. Moreover, if use or connection of the Southwest Sewer District is under consideration, we believe it was not thoroughly reviewed (“hard look”) in the EIS process.

Response C12-6:

When first conceived, and as explained and analyzed in the 2010 DGEIS, the revitalization of the Ronkonkoma Hub area included the construction of an STP within the Town of Brookhaven to solely serve the Ronkonkoma TOD. The 2010 DGEIS explained, among other things, that the then-contemplated Ronkonkoma TOD included the construction of an STP, which was shown, at that time, in the southeast portion of the Ronkonkoma Hub area (see Figure 24 in the 2010 DGEIS). Based on the program mix in the 2010 DGEIS, the projected sanitary waste volume from then-anticipated new development within the Ronkonkoma TOD was 169,000 gpd (see Section 4.2 of the 2010 DGEIS). However, the STP was, at that time, proposed to be sized to accommodate all land uses within the Ronkonkoma TOD area (projected new development plus existing development served by on-site sanitary systems). Based on the approximately five-acre land area on which the STP was proposed to be situated, that facility would have been capable of treating 275,000 gallons of sanitary waste per day. An analysis for the STP originally contemplated by the Town of Brookhaven was prepared and included in Appendix D of the 2010 DGEIS.
Since the time of preparation of the 2010 DGEIS (and as explained in Section 2.3 of the DGEIS), Suffolk County proposed to establish a sewer district and construct a STP on a 7.74-acre property, south of the LIRR tracks, opposite the southeastern portion of the Ronkonkoma Hub area. As part of the development of a new STP, the County was proposing to form a new sewer district, which would accommodate sewage from the Ronkonkoma Hub area as well as from unsewered areas within the Town of Islip. The new STP was proposed to be sized with an initial capacity of 500,000 gpd with the ability to expand to 750,000 gpd. The capacity was established based upon the approximately 400,000 gpd anticipated for future development within the Ronkonkoma Hub area, plus an additional 100,000 gpd for future connections in the Town of Islip, including, for example, potential future connections to MacArthur Airport. In addition, provisions for an additional 250,000 gpd (for a total capacity of 750,000 gpd) were being considered to accommodate potential future growth within the sewer district.

As explained at the DSGEIS hearing, Suffolk County is currently exploring another option to handle sewage from the Town of Islip and the Ronkonkoma Hub. This option consists of transporting sanitary waste from Ronkonkoma Hub through a force main system connecting to the Southwest Sewer District No. 3 (SWSD#3), where it will be treated and disposed of (see correspondence dated March 10, 2014 from Gilbert Anderson, P.E., Commissioner of the SCDFW in Appendix G of this DGEIS).

As explained by Commissioner Anderson (see Appendix G), the SCDFW “will be exploring the potential of connecting adjacent communities. The capacity of the current system will be sized to handle flows up to 1 million gallons per day. 400,000 gallons per day capacity will be reserved for Ronkonkoma Hub. The remaining 600,000 gallons per day is currently available for either Town to connect to. Discussions have begun with the Town of Islip who is very interested in connecting the Airport and possibly other nearby areas to the facility.” The regional sewage issue is a Suffolk County issue, and Suffolk County is responsible for complying with SSQRA and its implementing regulations and any other applicable laws and regulations.

**Comment C12-7:**

In summary, our objections to the TOD/Implementation Plan/Urban Renewal Plan are that it (i) effectively confiscates, destroys and takes my clients’ properties and development potential without payment of any compensation in violation of the New York and United States Constitutions; (ii) discriminates in favor of the Designated Developer; (iii) constitutes an excessive dilution or abdication of the Town’s sovereign zoning power; and (iv) has not fully reviewed the conditions and in particular the protracted construction period involved in the proposed development.

The TOD objectives, we believe, could equally be accomplished by the already existing property owners under the current J-6 zoning or by the Town providing incentives to the property owners, which could conceivably cost far less and be more practically achievable than the massive project envisioned by the TOD.
5.0 Conditions and Criteria Under Which Future Actions Will Be Undertaken or Approved Including Requirements For Subsequent SEQRA Compliance

6 NYCRR § 617.10(c) and (d) state, in pertinent part:

"(c) Generic EISs... should set forth specific conditions or criteria under which future actions will be undertaken or approved, including requirements for any subsequent SEQRA compliance...

(d) When a final generic EIS has been filed under this part:

(1) No further SEQRA compliance is required if a subsequent proposed action will be carried out in conformance with the conditions and thresholds established for such actions in the generic EIS or its findings statement;

(2) An amended findings statement must be prepared if the subsequent proposed action was adequately addressed in the generic EIS but was not addressed or was not adequately addressed in the findings statement for the generic EIS;

(3) A negative declaration must be prepared if a subsequent proposed action was not addressed or was not adequately addressed in the generic EIS and the subsequent action will not result in any significant environmental impacts;

(4) A supplement to the final generic EIS must be prepared if the subsequent proposed action was not addressed or was not adequately addressed..."
addressed in the generic EIS and the subsequent action may have one or more significant adverse environmental impacts.”

Based on the analyses contained in this DSGEIS, the following represent the conditions and thresholds, which, if met, would allow full development of the Ronkonkoma Hub area within the Town of Brookhaven without the need for further SEQR compliance or further approval from the Town Board:

- Total development of the Ronkonkoma Hub area shall not exceed the following development limits:
  - 1,450 residential units
  - Approximately 195,000 SF - retail
  - Approximately 360,000 SF - office/medical
  - Approximately 60,000 SF - flex space (including hospitality, conference and exhibition space, and/or residential units)

- Sanitary discharge (whether through connection to an existing Suffolk County STP, to a new Suffolk County STP or to another approved location) associated with development/redevelopment of parcels within the Ronkonkoma Hub area shall not exceed 400,000 gpd. In the event that development/redevelopment is proposed that would cause this capacity to be exceeded, additional evaluation must be conducted and additional sewage capacity must be secured to support the additional development.

- No residential development shall be permitted south of Railroad Avenue between Hawkins Avenue and Mill Road in order to minimize the potential for residents within the proposed development to be affected by LIRR operational noise.

\[\text{With the exception of the limitation on residential units (which is a maximum), the amount of retail, office/medical and flex space can vary (as same will be dictated by actual market demand), as long as such development conforms with the requirements of the TOD District.}\]
The development or improvement of the internal and immediate perimeter roadway systems within and bordering the Ronkonkoma TOD area should be performed as the parcels adjacent to those roads are developed to ensure adequate and safe access to surrounding roadways. Functionally, the proposed improvements to the majority of these roads are to provide parking areas and other roadside amenities to serve the adjacent and surrounding parcels.

The roundabout proposed at Railroad Avenue and Mill Road must be completed at such time as the adjacent development access which forms the south leg is developed (see Condition Figure B [Figure 3 herein]).

Hauppauge, NY 11788

RE: PROPOSED RONKONKOMA HUB SEWERS

Madam:

Pursuant to your conversations with Deputy County Executive Minieri, this will confirm that this Department is pursuing transporting sanitary waste from Ronkonkoma Hub through a force main system connecting to the Southwest Sewer District No. 3 (SWSD#3), where it will be treated and disposed of. A plan of the current proposed route is provided for your review and consideration showing the sanitary connection from the proposed Ronkonkoma Hub Development westward to existing sanitary sewer facilities in the vicinity of the former Central Islip State Psychiatric Facility, approximately 7 miles.

Although plans are in preliminary stages of development, the force main will be installed through either open cut trenching or directional drilling. Critical intersections such as Ocean Avenue (CR 93) and Johnson Avenue, or CR 100 with NYS 454, will be crossed using directional drilling to minimize impact of construction. In both cases the work will pass through a community extremely quickly. Our goal is to complete construction as quickly as possible, not only to complete the work but also to minimize the impact of construction to the local community.

We will be exploring the potential of connecting adjacent communities. The capacity of the current system will be sized to handle flows up to 1 million gallons per day. 400,000 gallons per day capacity will be reserved for Ronkonkoma Hub. The remaining 600,000 gallons per day is currently available for either Town to connect to. Discussions have begun with the Town of Islip who is very interested in connecting the Airport and possibly other nearby areas to the facility.

Should you have any further questions regarding these matters, please contact the undersigned.

Very truly yours,

Gilbert Anderson, P.E., Commissioner

WHEREAS, the Town Board is considering the adoption of the Ronkonkoma Hub Urban Renewal Plan, Ronkonkoma Hub Transit-Oriented Development Land Use and Implementation Plan, amendment to the Town Code Chapter 85 entitled "Zoning" by enacting Article XXIII entitled "Ronkonkoma Hub Transit-Oriented Development District" and change of zone of certain parcels to the Ronkonkoma Hub Transit-Oriented Development District; and

WHEREAS, a public hearing on the Ronkonkoma Hub Transit-Oriented Development (TOD) Land Use and Implementation Plan and the Draft Generic Environmental Impact Statement (DGEIS) was duly held by the Town Board on September 21, 2010; and

WHEREAS, subsequent revisions to the scope of the development were proposed, therefore requiring the preparation of revisions to the Ronkonkoma Hub Transit-Oriented Development (TOD) Land Use and Implementation Plan and a Draft Supplemental Generic Environmental Impact Statement (DSGEIS); and

WHEREAS, the Ronkonkoma Hub Transit-Oriented Development (TOD) Land Use and Implementation Plan and the Draft Supplemental Generic Environmental Impact Statement (DSGEIS) were accepted by the Town Board on November 12, 2013, and the public comment period was commenced; and
WHEREAS, on January 9, 2014, a joint public hearing was held on the Ronkonkoma Hub Draft Supplemental General Environmental Impact Statement (DSGEIS), Ronkonkoma Hub Urban Renewal Plan, Ronkonkoma Hub Transit-Oriented Development Land Use and Implementation Plan, amendment to Town Code Chapter 85 entitled “Zoning” by enacting Article XXIII entitled “Ronkonkoma Hub Transit-Oriented Development District” and change of zone of certain parcels to the Ronkonkoma Hub Transit-Oriented Development District at which time all interested parties were given an opportunity to be heard; and

WHEREAS, the public comment period on the Draft Supplemental Generic Environmental Impact Statement (DSGEIS) was closed on February 10, 2014; and

WHEREAS, on May 22, 2014, the Town Board accepted the Final Generic Environmental Impact Statement (FGEIS) for the Ronkonkoma Hub Urban Renewal Plan, Ronkonkoma Hub Transit-Oriented Development Land Use and Implementation Plan, amendment to Town Code Chapter 85 entitled “Zoning” by enacting Article XXIII entitled “Ronkonkoma Hub Transit-Oriented Development District” and change of zone of certain parcels to the Ronkonkoma Hub Transit-Oriented Development District, and a ten day consideration period was commenced; and

WHEREAS, in response to the submitted comments, questions and concerns, as well as the Town of Brookhaven’s own analysis, the Town Board is considering adoption of the Ronkonkoma Hub Urban Renewal Plan, Ronkonkoma Hub Transit-Oriented Development Land Use and Implementation Plan, amendment to Town Code Chapter 85 entitled “Zoning” by enacting Article XXIII entitled “Ronkonkoma Hub Transit-Oriented Development District” and change of zone of certain parcels to the Ronkonkoma Hub Transit-Oriented Development District; and

WHEREAS, pursuant to the requirements of Part 617.11 of the State Environmental Quality Review Act, a written Findings Statement must be prepared prior to the adoption of the Ronkonkoma Hub Urban Renewal Plan, Ronkonkoma Hub Transit-Oriented Development Land
Use and Implementation Plan, amendment to Town Code Chapter 85 entitled "Zoning" by enacting Article XXIII entitled "Ronkonkoma Hub Transit-Oriented Development District" and change of zone of certain parcels to the Ronkonkoma Hub Transit-Oriented Development District;

NOW, THEREFORE, BE IT RESOLVED by the Town Board of the Town of Brookhaven that the attached Findings Statement for the Ronkonkoma Hub Urban Renewal Plan, Ronkonkoma Hub Transit-Oriented Development Land Use and Implementation Plan, amendment to Town Code Chapter 85 entitled "Zoning" by enacting Article XXIII entitled "Ronkonkoma Hub Transit-Oriented Development District" and change of zone of certain parcels to the Ronkonkoma Hub Transit-Oriented Development District is hereby ADOPTED.
FIGURE 2 - PROPOSED FORCE MAIN ROUTING
STATE ENVIRONMENTAL QUALITY REVIEW ACT
RONKONKOMA HUB TRANSIT-ORIENTED DEVELOPMENT
HAMLET OF RONKONKOMA, TOWN OF BROOKHAVEN
SUFFOLK COUNTY, NEW YORK
TOWN BOARD OF THE TOWN OF BROOKHAVEN
FINDINGS STATEMENT

Date: June 24, 2014

This Findings Statement is issued pursuant to Article 8 of the Environmental Conservation Law (State Environmental Quality Review Act – SEQRA) and the implementing regulations therefor at 6 NYCRR Part 617.

Name of Action: Ronkonkoma Hub Transit-Oriented Development (TOD)

Location: 53.73± acres bounded by Union Avenue and Union Street to the north; Village Plaza Drive to the east; Ronkonkoma Avenue, Garrity Avenue and Hawkins Avenue to the west; and the railroad tracks of the Long Island Railroad to the south, in the hamlet of Ronkonkoma, Town of Brookhaven, Suffolk County

Lead Agency: Town Board of the Town of Brookhaven

Address: Town of Brookhaven Town Hall
One Independence Hill
Farmingville, New York 11738

Contact: Tullio Bertoli AIA, AICP, LEED Commissioner Department of Planning, Environment and Land Management

Telephone No.: (631) 451-6400

SEQR Status: Type I

The Town Board of the Town of Brookhaven (Town Board), as lead agency, subsequent to review of the Draft Generic Environmental Impact Statement (2010 DGEIS), the Draft Supplemental Generic Environmental Impact Statement (DSGEIS) and the Final Generic Environmental Impact Statement (FGEIS), hereby certifies that:

- It has considered the relevant environmental impacts, facts and conclusions disclosed in the EIS;
- It has weighed and balanced relevant environmental impacts with social, economic and other considerations;
- The requirements of 6 NYCRR Part 617 have been met; and
Findings Statement
Town Board of the Town of Brookhaven
Ronkonkoma Hub Transit-Oriented Development
Page 2

Consistent with social, economic and other essential considerations from among the reasonable alternatives available, the action described below is one that avoids or minimizes adverse environmental impacts to the maximum extent practicable and that adverse environmental impacts will be avoided or minimized to the maximum extent practicable by incorporating, as conditions to the decision, those mitigative measures that were identified as practicable during the environmental review process.

Description of Action

The proposed action consists of several Town Board actions that would culminate in the redevelopment of the Ronkonkoma Hub area, to wit:

- Adoption of the Urban Renewal Plan for the Proposed Ronkonkoma Hub Transit-Oriented Development (TOD) ("Urban Renewal Plan")
- Adoption of the Land Use Plan and Implementation Plan for the Proposed Ronkonkoma Hub Transit-Oriented Development (TOD) ("Land Use and Implementation Plan")
- Adoption of the Ronkonkoma Hub Transit-Oriented Development District ("TOD District")
- Change of zone of parcels within the Ronkonkoma Hub area to the TOD District.

The approval of these actions by the Town Board would allow development/redevelopment of the Ronkonkoma Hub area in accordance with the Urban Renewal Plan, Land Use and Implementation Plan, TOD District, and this Findings Statement.

Urban Renewal Plan

In September 2012, the Town of Brookhaven prepared The Ronkonkoma Hub Study Area Blight Study (Blight Study), for the Ronkonkoma Hub. The Blight Study found sufficient evidence to determine the Ronkonkoma Hub area to be substandard or insanitary in accordance with both Article 15 of the New York State General Municipal Law and Article XLI of Chapter 85 of the Town of Brookhaven Town Code. Based upon this, the Town authorized the preparation of an urban renewal plan. The intent of the Urban Renewal Plan is to address blighted conditions identified within the Ronkonkoma Hub area. It was prepared in order to facilitate the redevelopment of the Ronkonkoma Hub area featuring a mix of higher density residential development, commercial, hospitality, institutional, office and retail uses, conference, entertainment and exhibition venues, and public designated outdoor spaces.

The Urban Renewal Plan makes several recommendations with regard to land uses, zoning and other land use controls, building conditions and public improvements, most notably:
Findings Statement
Town Board of the Town of Brookhaven
Ronkonkoma Hub Transit-Oriented Development
Page 3

- Redevelopment with several multi-family residential buildings, mixed-use buildings potentially containing office, residential and retail uses, mixed-use buildings potentially containing commercial, exhibition, hospitality, institutional, and residential uses, retail and office buildings, as well as special use/entertainment venues.

- Implementation of a TOD zoning district in order facilitate the redevelopment.

- All structures to be acquired and demolished with the exception of the existing MTA parking garage and potentially the train station.

- Improvements and upgrades to infrastructure, including roads, sidewalks, curbs, public hardscape and landscape, gas lines, water mains, electric distribution, stormwater runoff collection systems, street and walkway lighting, and public parking areas.

Based on the findings and recommendations of the Urban Renewal Plan, a Conceptual Land Use Plan was developed for the proposed development/redevelopment of the Ronkonkoma Hub area. In total, the Conceptual Land Use Plan provides the maximum permitted development densities for each of the anticipated use types: a maximum of 1,450 dwelling units, approximately 195,000 square feet of retail space, approximately 360,000 square feet of office/medical space, and approximately 60,000 square feet of flex space (for hospitality, conference, exhibition, and/or residential uses).

**Land Use and Implementation Plan**

The Land Use and Implementation Plan was prepared as a result of the extensive planning process undertaken by the Town of Brookhaven for the redevelopment and revitalization of the 53.73±-acre area situated around the Ronkonkoma train station. It provides an overview of the Ronkonkoma Hub area, the background and history of the Town’s planning process, the proposed form-based code (FBC), and a redevelopment concept that illustrates the overall type and level of development that could take place with the application of the proposed FBC.

The Land Use and Implementation Plan, among other things, examines the proposed TOD District, discusses SEQRA compliance and the environmental and public review process, and discusses the implementation strategy for realizing the Town’s vision for the redevelopment of the Ronkonkoma Hub area.

**TOD District and Change of Zone**

The TOD District has been designed as an FBC. It establishes objectives, policies, and standards to promote orderly development and redevelopment within the Ronkonkoma Hub area for purposes of encouraging high-density mixed-use development, including residential, retail, entertainment, institutional and office uses. The overall intent of the TOD District is to encourage the efficient use of land, be a catalyst for revitalization, and foster a sense of place through development of a new transit-oriented, mixed use, pedestrian-friendly community.
Development within the Ronkonkoma Hub area would be governed by a “Regulating Plan.” This plan designates the subdistricts that comprise the TOD District and the various roadways within and adjacent to the subdistrict. There are four subdistricts set forth in the TOD District, as follows:

- **Neighborhood Subdistrict (A)** – The Neighborhood Subdistrict is a predominantly residential area with medium-to-high density building types. It allows for a limited amount of ground floor commercial use and live/work units. It provides a transition between single-family homes and more compact mixed-use areas.

- **Downtown Living Subdistrict (B)** – The Downtown Living Subdistrict is predominantly a mixed-use residential area with medium-to-high density building types. It allows for up to 50 percent commercial use.

- **Marketplace Subdistrict (C)** – The Marketplace Subdistrict allows for predominantly retail-focused mixed-use, maintaining a high level of flexibility to attract diverse local and national retailers.

- **Main Street Subdistrict (D)** – The Main Street Subdistrict is intended as predominantly a pedestrian-oriented, mixed-use town center. Regional shopping, entertainment, and outdoor dining uses are encouraged.

Each of the subdistricts is further broken down by maximum height in stories and maximum height in feet, as depicted on the Regulating Plan. The Regulating Plan also provides additional development parameters (e.g., street types, principal and secondary frontages, and blocks). Together with the Regulating Plan, development would be subject to compliance with the standards and regulations of the TOD District for streets and roadways (including streetscape standards), outdoor space, signage, lighting and parking.

The TOD District, once adopted by the Town Board, would be applied to the tax parcels located within the 53.73±-acre Ronkonkoma Hub area. A Conceptual Master Plan (“Maximum Density Concept Plan”) has been prepared to conform to the parameters of the Regulating Plan (described above). The Conceptual Master Plan is not a specific development proposal, as it is not feasible to define the specific development/redevelopment of the entire 53.73± acres of the Ronkonkoma Hub area. Development/redevelopment is expected to take place over several years, and the specific uses and level of development will be dictated by market demand. However, review of the Maximum Density Concept Plan, which examines maximum potential development proposed within the Ronkonkoma Hub area, enables the Town Board to take a “hard look” at the relevant environmental impacts through the performance of a comprehensive environmental review pursuant to SEQRA and its implementing regulations at 6 NYCRR Part 617, as further described below.

The Maximum Density Concept Plan included the following program: 1,450 residential units; 195,000 SF of retail; 360,000 SF of office/medical space; and 60,000 SF of flex space (including hospitality, conference and exhibition space, and/or residential units) (see attached). Total parking provided on the Maximum Density
Findings Statement
Town Board of the Town of Brookhaven
Ronkonkoma Hub Transit-Oriented Development
Page 5

Concept Plan is 3,638 parking spaces, not including those spaces within the existing parking garage (1,043) and existing parking lot (341).

The Maximum Density Concept Plan complies with the Regulating Plan (contained in the TOD District), which depicts the locations of the subdistricts set forth in the TOD District, and describes the character to be achieved within each of the subdistricts. The predominantly residential subdistrict (Neighborhood Subdistrict) is located at the northern and eastern extents of the Ronkonkoma Hub area, which relates to the existing surrounding residential development, while the predominantly retail subdistrict (Marketplace Subdistrict) is situated at the western extent of the Ronkonkoma Hub area, along Hawkins and Railroad Avenues. The Regulating Plan also depicts mixed-use subdistricts (the Downtown Living and the Main Street Subdistricts), that allow greater building heights, generally situated closer to the railroad tracks and around the train station. The Maximum Density Concept Plan conforms to the Regulating Plan in terms of distribution of uses, heights and density of development.

Summary of SEQRA Process
Commencing in 2007, the Town Board has worked with the community to revitalize the Ronkonkoma Hub area. Since that time, the Town of Brookhaven completed a two-phased planning study to revitalize the Ronkonkoma Hub area, known as the Ronkonkoma Hub Planning Study. Thereafter, based upon the aforesaid planning efforts, the Town of Brookhaven prepared an initial draft Land Use and Implementation Plan for the Ronkonkoma Hub area as well as an initial draft TOD zoning district. On August 17, 2010, the Town Board of the Town of Brookhaven, as lead agency, issued a positive declaration, and required the preparation of a draft generic environmental impact statement to evaluate the impacts of the adoption of a Land Use and Implementation Plan and TOD zoning district, the rezoning of the Ronkonkoma Hub area to a TOD zoning district and the ultimate development/redevelopment of properties within the Ronkonkoma Hub area in accordance with the ultimately-adopted Land Use and Implementation Plan and TOD zoning district. The Town Board determined that a generic environmental impact statement would be required, as the proposed action consisted of a sequence of actions as well as adoption of a land use plan and new zoning regulations for the Ronkonkoma Hub area. Pursuant to 6 NYCRR §617.10(a):

"Generic EISs may be broader, and more general than site or project specific EISs and should discuss the logic and rationale for the choices advanced. They may also include an assessment of specific impacts if such details are available. They may be based on conceptual information in some cases. They may identify the important elements of the natural resource base as well as the existing and projected cultural features, patterns and character. They may discuss in general terms the constraints and consequences of any narrowing of future options. They may present and analyze in general terms a few hypothetical scenarios that could and are likely to occur.

A generic EIS may be used to assess the environmental impacts of:

(1) a number of separate actions in a given geographic area which, if considered singly, may have minor impacts, but if considered together may have significant impacts; or
(2) a sequence of actions, contemplated by a single agency or individual; or

(3) separate actions having generic or common impacts; or

(4) an entire program or plan having wide application or restricting the range of future alternative policies or projects, including new or significant changes to existing land use plans, development plans, zoning regulations or agency comprehensive resource management plans.”

Moreover, a generic environmental impact statement provides for the establishment of conditions and thresholds that guide requirements for future SEQRA compliance and future actions: Pursuant to 6 NYCRR §617.10(c) and (d):

“(c) Generic EISs and their findings should set forth specific conditions or criteria under which future actions will be undertaken or approved, including requirements for any subsequent SEQRA compliance. This may include thresholds and criteria for supplemental EISs to reflect specific significant impacts, such as site specific impacts, that were not adequately addressed or analyzed in the generic EIS.

(d) When a final generic EIS has been filed under this part:

(1) No further SEQRA compliance is required if a subsequent proposed action will be carried out in conformance with the conditions and thresholds established for such actions in the generic EIS or its findings statement;

(2) An amended findings statement must be prepared if the subsequent proposed action was inadequately addressed in the generic EIS but was not addressed or was not adequately addressed in the findings statement for the generic EIS;

(3) A negative declaration must be prepared if a subsequent proposed action was not addressed or was not adequately addressed in the generic EIS and the subsequent action will not result in any significant environmental impacts;

(4) A supplement to the final generic EIS must be prepared if the subsequent proposed action was not addressed or was not adequately addressed in the generic EIS and the subsequent action may have one or more significant adverse environmental impacts.”

Subsequent to issuance of the aforesaid positive declaration on August 17, 2010, the Town prepared the 2010 DGEIS, which evaluated a theoretical maximum development scenario (“Theoretical Full Build Plan”). Examination of the Theoretical Full Build Plan, as well as two alternatives, in the 2010 DGEIS enabled the Town Board to conduct a comprehensive environmental review of the overall then-proposed action and take a “hard look” pursuant to SEQRA and its implementing regulations at 6 NYCRR Part 617. The Town of Brookhaven Town Board, serving as lead agency, accepted the 2010 DGEIS on September 21, 2010, and a public hearing was held on October 19, 2010. The public comment period on the 2010 DGEIS closed on
October 29, 2010. The support for the redevelopment of the Ronkonkoma Hub area was evident from the aforesaid public hearing and the various community meetings that took place throughout the planning process.

Subsequent to the public hearing on the 2010 DGEIS, the Town of Brookhaven, in an effort to ensure that the planning efforts would result in the actual redevelopment of the blighted Hub area, decided to seek private developer input. The Town issued a Request for Expressions of Interest (RFEI) and ultimately a Request for Qualifications (RFQ) for a Master Developer. Upon review of preliminary plans received as part of the RFEI and RFQ processes, the Town of Brookhaven prepared the Blight Study, which ultimately resulted in the preparation of the Urban Renewal Plan for the Ronkonkoma Hub area. The densities recommended in the Urban Renewal Plan were different than those originally evaluated in the 2010 DGEIS. Accordingly, a new Environmental Assessment Form was prepared by the Town Board, and a positive declaration was issued on October 1, 2013, which indicated the need to prepare a supplemental draft generic environmental impact statement. To ensure complete and comprehensive environmental review in accordance with SEQRA and its implementing regulations at 6 NYCRR Part 617, the Town of Brookhaven prepared the DSGEIS to identify and evaluate potential significant adverse environmental impacts that may differ from those evaluated in the 2010 DGEIS, in accordance with 6 NYCRR §617.9(a)(7) Supplemental EISs, to wit:

“(7) Supplemental EISs.

(i) The lead agency may require a supplemental EIS, limited to the specific significant adverse environmental impacts not addressed or inadequately addressed in the EIS that arise from:

   (a) changes proposed for the project; or
   (b) newly discovered information; or
   (c) a change in circumstances related to the project.

(ii) The decision to require preparation of a supplemental EIS, in the case of newly discovered information, must be based upon the following criteria:

   (a) the importance and relevance of the information; and
   (b) the present state of the information in the EIS.

(iii) If a supplement is required, it will be subject to the full procedures of this Part.”
As the maximum potential development considered for the Ronkonkoma Hub area, as defined in the Urban Renewal Plan, was greater than that evaluated in the 2010 DGEIS, the DSGEIS was prepared to address potential changes in impacts that would result from the modified proposed action. The Town of Brookhaven Town Board, serving as lead agency, accepted the DSGEIS on November 12, 2013, and a public hearing was held on January 9, 2014. The public comment period on the DSGEIS closed on February 10, 2014. As with the 2010 DGEIS hearing and public comment period, support for this modified proposed action was evident.

In accordance with 6 NYCRR § 617.9(b)(8), the FGEIS was prepared and filed by the Town Board on May 22, 2014. The FGEIS responded to all substantive comments received on the 2010 DGEIS and the DSGEIS.

Conditions and Criteria Under which Future Actions will be Undertaken or Approved, Including Requirements for any Subsequent SEQRA Compliance

As explained above, 6 NYCRR §617.10(c) indicates, in pertinent part, that generic environmental impact statements should set forth specific conditions and criteria under which future actions will be undertaken or approved, including requirements for any subsequent SEQRA compliance. Based on the analyses contained in the 2010 DGEIS, the DSGEIS and FGEIS, the following represents the conditions and thresholds, which, if met, would eliminate the need for further SEQRA compliance for development/redevelopment within the Ronkonkoma Hub area or further approval from the Town Board.

SEQRA Compliance Thresholds and Conditions

A. Total development of the Ronkonkoma Hub area shall not exceed the following development limits:

- 1,450 residential units
- Approximately 195,000 SF - retail
- Approximately 360,000 SF - office/medical
- Approximately 60,000 SF - flex space (including hospitality, conference and exhibition space, and/or residential units).

B. Sanitary discharge (whether through connection to an existing Suffolk County sewage treatment plant (STP), to a new Suffolk County STP or to another approved sewage treatment facility) associated with development/redevelopment of parcels within the Ronkonkoma Hub area shall not exceed 400,000 gallons per day (gpd). In the event that development/redevelopment is proposed that would cause this capacity to be exceeded, additional evaluation must be conducted and additional sewage capacity must be secured to support the additional development.

1 With the exception of the limitation on residential units (which is a maximum), the amount of retail, office/medical, flex space and other commercial uses can vary, as long as such development conforms to the requirements of the TCD District.
C. No residential development shall be permitted south of Railroad Avenue between Hawkins Avenue and Mill Road in order to minimize the potential for residents within the proposed development to be affected by LIRR operational noise.

D. The development or improvement of the internal and immediate perimeter roadway systems within and bordering the Ronkonkoma TOD area should be performed as the parcels adjacent to those roads are developed to ensure adequate and safe access to surrounding roadways. Functionally, the proposed improvements to the majority of these roads are to provide parking areas and other roadside amenities to serve the adjacent and surrounding parcels.

E. The roundabout proposed at Railroad Avenue and Mill Road must be completed at such time as the adjacent development access which forms the south leg of the intersection is developed (see Condition Figure B).

---

2 This does not apply to certain improvements, as set forth in Item G of the "SEGRA Compliance Thresholds and Conditions" section of this document.

- Restripe southbound approach to provide a left turn lane and a thru lane.
- Modify phasing to provide a southbound left turn phase.
F. The northbound right turn lane proposed at the intersection of Mill Road at Union Avenue (described in the Traffic Mitigation Table for location 6 and depicted on Condition Figure A) must be constructed when either the adjacent Parcel I or Parcel K, as shown on the Maximum Density Concept Plan, is developed (see attached).

G. With respect to off-site mitigation, the following discussion provides the required off-site mitigation phasing, and identifies trip generation thresholds at which certain mitigation must be in place. It is noted that these thresholds are based on the net trip generation, which represents the anticipated trips after adjustments for the TOD and pass-by credits\(^3\) have been applied.

(i) Mitigation Level One (Initial Construction) – Prior to occupancy of the initially constructed building(s) within the TOD, Hawkins Avenue should be improved from Railroad Avenue to just south of the LIE. This includes the installation of a new traffic signal at Railroad Avenue. The mitigation detailed in the Traffic Mitigation Table for locations 5 and 10 and depicted on Condition Figure A shall be completed during this initial phase and prior to building occupancy (except for the requirement for an additional northbound lane on Hawkins Avenue north of Union Avenue for which additional right-of-way is required, which is discussed as a separate mitigation phasing item).

(ii) Mitigation Level Two – Prior to occupancy of buildings in the TOD that increase net trip generation of the development during the weekday p.m. peak period above 400 vehicles per hour (combined entering and exiting), the mitigation detailed in the Traffic Mitigation Table for locations 7, 8, 9, 11 and 12 and depicted on Condition Figures A and C, shall be completed.

(iii) Mitigation Level Three – Prior to occupancy of buildings in the TOD that increase net trip generation of the development during the weekday p.m. peak period above 500 vehicles per hour (combined entering and exiting), the mitigation detailed in the Traffic Mitigation Table for locations 2 and 4 and depicted on Condition Figure B, along the entirety of the LIE South Service Road, shall be completed.

\(^3\) The TOD credit is a reduction in gross trip generation of 25 percent, applied to all uses in the TOD. The pass-by credit is a further reduction in trip generation for retail and restaurant uses within the TOD as prescribed in the Institute of Transportation Engineer's Trip Generation Manual, latest edition, but shall not exceed 20 percent for any specific use (see Section 3 of the Traffic Impact Study in Appendix H of the DSGEIS). At the time of each site plan application submission, the Planning Board shall require that the applicant submit trip generation data associated with the development proposed as part of the site plan, in accordance with the methodology set forth in Section 3 of the Traffic Impact Study in Appendix H of the DSGEIS. The Planning Board will keep a running total of trip generation, based upon all site plans approved in the Ronkonkoma Hub area, to ensure that the mitigation requirements are complied with.
(iv) Mitigation Level Four – Prior to occupancy of buildings in the TOD that increase net trip generation of the development during the weekday p.m. peak period above 700 vehicles per hour (combined entering and exiting), the mitigation detailed in the Traffic Mitigation Table for locations 1 and 3 and depicted on Condition Figure B, along the entirety of the LIE North Service Road, shall be completed.

(v) Mitigation Level Five – Upon reaching a trip generation of 1,100 vehicles in the p.m. peak hour (combined entering and exiting trips), traffic mitigation along Hawkins Avenue, between Union Avenue and the LIE South Service Road that was begun under Mitigation Level One (Initial Construction) must be completed, as detailed in the Traffic Mitigation Table for location 5 and depicted on Condition Figure A. This includes the construction of the second northbound lane on Hawkins Avenue from Union Avenue to the LIE South Service Road and the striping of the westbound Union Avenue approach to three lanes as depicted on Condition Figure A. No building permits shall be issued for development that would result in a trip generation of greater than 1,100 vehicles in the p.m. peak hour (combined entering and exiting) until such traffic mitigation is implemented, unless same is deemed unnecessary by the Town Board based upon a change in traffic conditions.

In the event that any of the above-listed conditions are proposed to be exceeded by future development, additional SEQRA compliance would be necessary in accordance with 6 NYCRR §§17.10(d)(2), (3) or (4), as would be appropriate, given the actual development plan proposed and the potential significant adverse environmental impacts associated therewith.

Furthermore, with respect to future development approvals (i.e., after the Town Board adopts the TOD District and applies the zoning to the Ronkonkoma Hub area, as described above), the applicants will be required to obtain site plan approval from the Planning Board for proposed development. In addition to the standard site plan application requirements, at the time a site plan is submitted to the Town, an applicant must:

Approval Thresholds and Conditions

A. Prepare and submit a construction traffic management and logistics plan. This plan, at a minimum, should indicate the following:

» Days/hours of proposed construction activity
» Designated routes of heavy vehicles to and from the site
» Parking areas for workers and heavy vehicles
» Construction staging areas.

B. If existing designated commuter parking will be temporarily or permanently displaced to accommodate the proposed development, prepare and submit a plan that demonstrates that
parking will be replaced at a minimum ratio of one-to-one. Such replacement parking shall be in place prior to the displacement of existing designated commuter parking, and shall be acceptable to the MTA.

C. Provide a letter of sewer availability/connection approval (or documentation from the appropriate regulatory agency as to the approved method of sanitary discharge) prior to final site plan approval.

D. Demonstrate (for multi-story buildings) that there is adequate water pressure for the higher elevations in the buildings, and, where necessary, install a booster pump system.

E. Demonstrate that water conservation measures, including low-flow fixtures, low-flow toilets, and/or drip irrigation will be implemented.

F. Submit confirmation that the site plan has been submitted to the Ronkonkoma Fire Department for review.

G. Engage Suffolk County Transit in discussions regarding the potential need to increase or modify the level or type of service provided in the Ronkonkoma Hub area based on changes in demand, if any, as development occurs. Such discussions with Suffolk County Transit should continue throughout the development process to maximize the effectiveness of this service as the TOD develops over time.

H. Initiate coordination with the FAA, and submit proof of such coordination to the Planning Board. This coordination is required in order to comply with FAA Federal Aviation Regulation (FAR) Part 77: Objects Affecting Navigable Airspace. This coordination will assess the potential impact of the project on airports and airspace procedures (instrument and visual routes and approach and departure). In order to comply with FAR Part 77, coordination with the FAA would be initiated when the specific proposed locations (surveyed coordinates) and constructed heights of the proposed buildings are finalized. Once that information is available, the applicant must submit an FAA Form 7460-1 “Notice of Proposed Construction or Alteration” along with surveyed coordinates and a site map of the proposed project to the FAA. The FAA will evaluate the potential for the project to affect aeronautical operations that occur within the vicinity of the project site. The applicant must submit documentation to the Town regarding the FAA’s determination prior to issuance of a building permit for the building(s) that are the subject of the site plan(s) before the Planning Board.

Findings and Mitigation Measures

Upon due consideration and among the reasonable alternatives available, the Town Board has determined that the following represents the mitigation measures to be incorporated into the decision to ensure that
significant adverse environmental impacts will be avoided or minimized to the maximum extent practicable, to wit:

**Soils and Topography**

1. Redevelopment of properties within the Ronkonkoma Hub area would result in the disturbance of soils within the Ronkonkoma Hub area for foundation excavation, utility installation, grading, paving, and landscaping. The disturbance of soils for construction and regrading activities increases the potential for erosion and sedimentation. Based on the soil characteristics and the planning and engineering limitations defined in the *Soil Survey*, it is not expected that development/redevelopment of properties in the Ronkonkoma Hub area would result in significant adverse soil impacts. However, site-specific applications for redevelopment within the Ronkonkoma Hub area would be required to conduct on-site borings to determine specific soil conditions, and to ensure that appropriate measures are implemented to mitigate issues that may arise.

2. All development within the Ronkonkoma Hub area would be required to employ proper erosion and sedimentation controls in accordance with Chapter 86 of the Town Code. In addition, dust control measures would also be employed, as necessary, during dry or windy periods. With suitable and proper erosion and sedimentation controls, in accordance with Chapter 86 of the Town Code, it is not expected that site development/redevelopment would result in significant adverse impacts associated with ground disturbance, regrading and/or construction activities.

3. Since the topography is relatively flat, the overall topographic conditions of the area would not be expected to significantly change upon development/redevelopment of the Ronkonkoma Hub area. Based upon preliminary earthwork calculations (pursuant to the Maximum Density Concept Plan evaluated in the DSGEIS), overall grading, installation of underground parking garages and installation of stormwater management structures would result in approximately 65,108 cubic yards of cut, although numerous factors (e.g., final building design, project phasing) could influence or lessen the actual earthwork volumes. There would be sufficient opportunity during the design of the various phases of the project to refine grading plans so as to bring the earthwork more into balance as development proceeds. Therefore, the estimate of earthwork quantities provided as part of the preliminary engineering analysis and the number of associated truck trips should be considered as the "worst-case" scenario, with the expectation that final design would achieve a more balanced site. This, combined with the requirement for implementation of proper erosion and sediment controls, would ensure that no significant adverse impacts to topographic features would be expected.

4. During development/redevelopment, dust control measures would be implemented during dry or windy periods. The appropriate methods of dust control would be determined by the surfaces affected (i.e., roadways or disturbed areas) and would include, as necessary, the application of water, the use of stone in construction roads, and vegetative cover.
5. Phasing of the project over a number of years would minimize the impact of excavation, as it would spread out the number of truck trips associated with soil removal.

Water Resources

1. In order to ensure the protection of groundwater, future site-specific development applications in accordance with the TOD District would comply with the relevant recommendations of the “Wastewater Management Alternatives” and the “Highest Priority Areawide Alternatives” of the 208 Study. In order to comply with these recommendations, all site-specific applications would be subject to compliance with the Town's stormwater ordinance (Chapter 86 of the Town Code). Stormwater would be contained and recharged on the site through the use of leaching pools, which is a proper drainage method. In addition, the development would be connected to a municipal STP, which would remove nitrogen before recharge to groundwater. Development within the Ronkonkoma Hub would be required to incorporate native and/or low-maintenance species, to the maximum extent practicable, to encourage a low-maintenance landscape. Also, water conservation methods would be used to the maximum extent practicable to decrease overall water usage.

2. With respect to sanitary flow, the projected sanitary flow upon implementation of the proposed action and full development/redevelopment of the Ronkonkoma Hub area in accordance with the TOD District, is approximately 400,000 gpd. As this flow exceeds what would be permitted by Article 6 of the Suffolk County Sanitary Code in the Ronkonkoma Hub area if such sanitary flow was handled by on-site sanitary systems, connection to an STP is required.

When first conceived, and as explained and analyzed in the 2010 DGEIS, the revitalization of the Ronkonkoma Hub area included the construction of an STP within the Town of Brookhaven to solely serve the Ronkonkoma TOD. The 2010 DGEIS explained, among other things, that the then-contemplated Ronkonkoma TOD included the construction of an STP, which was shown, at that time, in the southeast portion of the Ronkonkoma Hub area. Based on the program mix in the 2010 DGEIS, the projected sanitary waste volume from then-anticipated new development within the Ronkonkoma TOD was 169,000 gpd. However, the STP was, at that time, proposed to be sized to accommodate all land uses within the Ronkonkoma TOD area (projected new development plus existing development served by on-site sanitary systems). Based on the approximately five-acre land area on which the STP was proposed to be situated, that facility would have been capable of treating 275,000 gallons of sanitary waste per day.

Since the time of preparation of the 2010 DGEIS, Suffolk County proposed to establish a sewer district and construct a STP on a 7.74-acre property, south of the LIRR tracks, opposite the southeastern portion of the Ronkonkoma Hub area. As part of the development of a new STP, the County was proposing to form a new regional sewer district, which would accommodate sewage from the Ronkonkoma Hub area as well as from unsewered areas within the Town of Islip. The
Findings Statement
Town Board of the Town of Brookhaven
Ronkonkoma Hub Transit-Oriented Development
Page 21

A new STP was proposed to be sized with an initial capacity of 500,000 gpd with the ability to expand to 750,000 gpd. The capacity was established based upon the approximately 400,000 gpd anticipated for future development within the Ronkonkoma Hub area, plus an additional 100,000 gpd for future connections in the Town of Islip, including, for example, potential future connections to MacArthur Airport. In addition, provisions for an additional 250,000 gpd (for a total capacity of 750,000 gpd) were being considered to accommodate potential future growth within the sewer district.

Subsequent to preparation of the 2010 DGEIS and the DSGEIS, and as explained at the DSGEIS hearing and in the FGEIS, Suffolk County is currently exploring another option to handle sewage from the Town of Islip and the Ronkonkoma Hub. This option consists of transporting sanitary waste from the Ronkonkoma Hub through a force main system connecting to the Southwest Sewer District No. 3 (SWSD#3), where it will be treated and disposed of. According to SCDPW Commissioner Anderson, the SCDPW “will be exploring the potential of connecting adjacent communities. The capacity of the current system will be sized to handle flows up to 1 million gallons per day. 400,000 gallons per day capacity will be reserved for Ronkonkoma Hub. The remaining 600,000 gallons per day is currently available for either Town to connect to. Discussions have begun with the Town of Islip who is very interested in connecting the Airport and possibly other nearby areas to the facility.”

To ensure that no significant adverse impacts result from sanitary sewage generated from development/redevelopment within the Ronkonkoma Hub area, applicants for development/redevelopment therein will be required to provide a letter of sewer availability/connection approval (or documentation from the appropriate regulatory agency as to the approved method of sanitary discharge) to the Planning Board prior to final site plan approval.

3. Utilizing the SCDHS design sewage flow rates as the basis for estimating potable water requirements, the domestic water use for development/redevelopment of the Ronkonkoma Hub area (in accordance with the Maximum Density Concept Plan) would be approximately 400,000 gpd. With an additional 10 percent of water estimated for irrigation and domestic uses not entering the STP, the total projected potable water demand for development in accordance with the Maximum Density Concept Plan is approximately 440,000 gpd. Consultations were undertaken with the Suffolk County Water Authority (SCWA), which indicated that it could provide the required volume of water. To minimize water use to the maximum extent practicable, parcels developed or redeveloped within the Ronkonkoma Hub area will implement water conservation measures, including low-flow fixtures, low-flow toilets, and/or drip irrigation. With respect to flow, during the site plan approval process, applicants for multi-story buildings would be required to demonstrate that there is adequate water pressure for the higher elevations in the buildings, and, where necessary, install a booster pump system to ensure proper flow.
Findings Statement
Town Board of the Town of Brookhaven
Ronkonkoma Hub Transit-Oriented Development
Page 22

4. Stormwater runoff generated within each of the individual private development blocks would be required to be collected and recharged on-site, in accordance with current Town site plan requirements and Chapter 86 of the Town Code. In accordance with Town standards for subdivision roadway improvements, a leaching basin system would be used for individual tributary areas within the public rights-of-way. As the stormwater systems would be designed to collect and recharge runoff in accordance with Town requirements, no significant adverse impact with respect to stormwater runoff is anticipated.

5. Since the Ronkonkoma Hub area does not contain surface waters or wetlands, and is not located within a flood zone, implementation of the proposed action would not impact same.

Ecology

1. Much of the existing vegetation on properties within the Ronkonkoma Hub area is comprised of non-native ornamental trees, shrubs and herbaceous plants populating the various lawn/landscaped areas associated with the developed portions of the site. The ecological communities that would be most affected (i.e., Mowed Lawn, Mowed Lawn with Trees and Flower Herb Garden) are all common in the general surrounding area of the site. Further, all three communities would continue to exist on properties within the Ronkonkoma Hub area following development/redevelopment, as these communities are associated with developed properties. There are some relatively limited areas of Successional Southern Hardwoods and Successional Shrubland in the Ronkonkoma Hub area that would likely be entirely removed as part of the development/redevelopment of the Ronkonkoma Hub area. However, both of these communities exist as a result of past clearing or other anthropogenic disturbance, and support a variety of invasive/non-native vegetation. As a result, the overall ecological value of these communities, both the overall flora of the site and as native wildlife habitat, has been degraded. As such, development/redevelopment of the Ronkonkoma Hub area is not expected to result in significant adverse ecological impacts.

2. Although no significant adverse ecological impacts have been identified as a result of implementation of the proposed action, to minimize habitat impacts, development/redevelopment would incorporate native or low-maintenance species into the landscaping plans, to the maximum extent practicable.

Land Use and Zoning

1. In order to ensure that the vision set forth in the visioning process and the planning studies conducted by the Town and set forth in the Land Use and Implementation Plan is realized through the actual development/redevelopment, the TOD District has been designed as a FBC. The FBC zoning focuses on regulating the public realm, including street types, blocks, and civic spaces and provides for flexibility in use, site and architectural design. The FBC also includes an extensive use of graphics to illustrate, for example, the anticipated relationship of the building to the street or
Findings Statement
Town Board of the Town of Brookhaven
Ronkonkoma Hub Transit-Oriented Development
Page 23

site. The TOD District establishes objectives, policies, and standards to promote orderly development and redevelopment within the Ronkonkoma Hub area for purposes of encouraging high-density mixed-use development, and residential, retail, office, entertainment and institutional uses. The overall intent of the TOD District is to encourage the efficient use of land, be a catalyst for revitalization, and foster a sense of place through development of a new transit-oriented, mixed-use, pedestrian-friendly community. Accordingly, development or redevelopment in accordance with the TOD District will ensure that the Town’s vision for the Ronkonkoma Hub area is realized, and that implementation of the proposed action will result in the land use benefits identified in the Land Use and Implementation Plan.

2. From a regulatory perspective, site plan applications for development or redevelopment in the Ronkonkoma Hub area would be subject to the regulations set forth in the TOD District, including the Regulating Plan. As with other site plan applications submitted to the Town for development in other zoning districts, the Planning Board would be responsible for approving, conditionally approving or denying such applications, and through its decisions would ensure that the goals of the Land Use and Implementation Plan are achieved.

3. The proposed action comports with the Town’s Blight to Light Study (which recommended a number of tools to redevelop and revitalize the Ronkonkoma Hub area, including the development of new zoning), as well as with the Blight Study and the Urban Renewal Plan that were specifically conducted for the Ronkonkoma Hub area.

4. While the land use and zoning within the Ronkonkoma Hub area would change, no significant adverse environmental impacts with respect to land use and zoning would result. The proposed action has been designed to have a positive impact on land use within the Ronkonkoma Hub area through the creation and application of the TOD District, which will allow comprehensive, cohesive and flexible development within the Ronkonkoma Hub area.

Traffic and Parking

1. Detailed traffic analyses were conducted in the 2010 DGEIS, the DSGEIS and FGEIS, which evaluated the existing traffic conditions and the future conditions, both with and without the proposed action (i.e., the “Build” and “No-Build” conditions, respectively). The No-Build condition represented the future traffic conditions that can be expected to occur, were the proposed TOD not constructed. The No-Build condition serves to provide a comparison to the Build condition, which represents expected future traffic conditions resulting from both project- and non-project-generated traffic. Background traffic volumes in the study area were projected to the anticipated build year, the year when the proposed action is expected to be completed and operational. An evaluation of the existing parking supply, the demand for parking, and appropriate parking ratios to meet those demands was also included.
One of the primary goals of any TOD is to reduce dependence on automobiles by situating such TOD proximate to mass transit. The proximity of the development to mass transit works to reduce vehicle trips, as a significant percentage of people residing there would use the train and bus services for their commute to and from work. Similarly, a significant percentage of people employed in the retail and office portion of the development would arrive and leave by transit. The residents and other commuters using the LIRR may choose to shop at the retail stores and patronize restaurants located within the development, thereby reducing the vehicle trips. It is also possible that a percentage of people would both live and work within the development, further reducing vehicle trips. Available studies on TODs show a reduction in vehicle trips by almost 50 percent. In order to take a conservative approach, the traffic analyses conducted assumed only a 25 percent reduction in trip generation.

The following intersections were analyzed in the 2010 DGEIS and DSGEIS:

1. Long Island Expressway (LIE) North Service Road at Hawkins Avenue (Signalized)
2. LIE South Service Road at Hawkins Avenue (Signalized)
3. LIE North Service Road at Ronkonkoma Avenue (Signalized)
4. LIE South Service Road at Ronkonkoma Avenue (Signalized)
5. Hawkins Avenue at Union Avenue (Signalized)
6. Union Avenue at Mill Road (Signalized)
7. Railroad Avenue at Powell Street (Signalized)
8. Johnson Avenue at Northwest Link (Signalized)
9. Hawkins Avenue at Railroad Avenue (Unsignalized)
10. Ronkonkoma Avenue at 2nd Street/Powell Street (Unsignalized).

Based upon comments raised by the Town of Islip during the comment period on the DSGEIS, an additional eight intersections were evaluated as part of the FGEIS, as follows:

1. Ocean Avenue at Express Drive North
2. Ocean Avenue at Express Drive South
3. Pond Road at Express Drive South
4. Ocean Avenue at Johnson Avenue
5. Pond Road at Johnson Avenue (Railroad Avenue)
6. Lakeland Avenue at Smithtown Avenue
7. Railroad Avenue at Coates Avenue
8. Railroad Avenue at Main Street.

In addition, based on comments received on the DSGEIS, an analysis was performed of the ramp junctions with the LIE mainline for the four ramps at interchange 60 as part of the FGEIS. This included an evaluation of the ramp junctions in the Build Year both with and without the traffic associated with the TOD.
Based upon the traffic analyses conducted, an extensive mitigation program has been developed and incorporated into the "Conditions and Criteria Under which Future Actions will be Undertaken or Approved, Including Requirements for any Subsequent SEQRA Compliance," presented earlier in this Findings Statement. The traffic mitigation measures are set forth below:

- The development or improvement of the internal and immediate perimeter roadway systems within and bordering the Ronkonkoma TOD area should be performed as the parcels adjacent to those roads are developed to ensure adequate and safe access to surrounding roadways. Functionally, the proposed improvements to the majority of these roads are to provide parking areas and other roadside amenities to serve the adjacent and surrounding parcels.

- The roundabout proposed at Railroad Avenue and Mill Road must be completed at such time as the adjacent development access which forms the south leg of the intersection is developed (see Condition Figure B).

* The Condition Figures referenced herein can be found in the section of this Findings Statement entitled "Conditions and Criteria Under which Future Actions will be Undertaken or Approved, Including Requirements for any Subsequent SEQRA Compliance",

* This does not apply to certain improvements, as set forth in Item G of the "SEQRA Compliance Thresholds and Conditions" section of this document.

</table>
The northbound right turn lane proposed at the intersection of Mill Road at Union Avenue (described in the Traffic Mitigation Table for location 6 and depicted on Condition Figure A) must be constructed when either the adjacent Parcel I or Parcel K, as shown on the Maximum Density Concept Plan, is developed.

With respect to off-site mitigation, the following discussion provides the required off-site mitigation phasing, and identifies trip generation thresholds at which certain mitigation must be in place. It is noted that these thresholds are based on the net trip generation, which represents the anticipated trips after adjustments for the TOD and pass-by credits have been applied.

Mitigation Level One (Initial Construction) – Prior to occupancy of the initially constructed building(s) within the TOD, Hawkins Avenue should be improved from Railroad Avenue to just south of the LIE. This includes the installation of a new traffic signal at Railroad Avenue. The mitigation detailed in the Traffic Mitigation Table for locations 5 and 10 and depicted on Condition Figure A shall be completed during this initial phase and prior to building occupancy (except for the requirement for an additional northbound lane on Hawkins Avenue north of Union Avenue for which additional right-of-way is required, which is discussed as a separate mitigation phasing item).

Mitigation Level Two – Prior to occupancy of buildings in the TOD that increase net trip generation of the development during the weekday p.m. peak period above 400 vehicles per hour (combined entering and exiting), the mitigation detailed in the Traffic Mitigation Table for locations 7, 8, 9, 11 and 12 and depicted on Condition Figures A and C shall be completed.

Mitigation Level Three – Prior to occupancy of buildings in the TOD that increase net trip generation of the development during the weekday p.m. peak period above 500 vehicles per hour (combined entering and exiting), the mitigation detailed in the Traffic Mitigation Table for locations 2 and 4 and depicted on Condition Figure B, along the entirety of the LIE South Service Road shall be completed.

Mitigation Level Four – Prior to occupancy of buildings in the TOD that increase net trip generation of the development during the weekday p.m. peak period above 700 vehicles per hour (combined entering and exiting), the mitigation detailed in the Traffic Mitigation Table for locations 1 and 3 and depicted on Condition Figure B, along the entirety of the LIE North Service Road shall be completed.

Mitigation Level Five – Upon reaching a trip generation of 1,100 vehicles in the p.m. peak

---

5 The TOD credit is a reduction in gross trip generation of 25 percent, applied to all uses in the TOD. The pass-by credit is a further reduction in trip generation for retail and restaurant uses within the TOD as prescribed in the Institute of Transportation Engineer's Trip Generation Manual, latest edition, but shall not exceed 20 percent for any specific use (see Section 3 of the Traffic Impact Study in Appendix H of the DSGEIS).
hour (combined entering and exiting trips), traffic mitigation along Hawkins Avenue, between Union Avenue and the LIE South Service Road that was begun under Mitigation Level One (Initial Construction) must be completed, as detailed in the Traffic Mitigation Table for location 5 and depicted on Condition Figure A. This includes the construction of the second northbound lane on Hawkins Avenue from Union Avenue to the LIE South Service Road and the striping of the westbound Union Avenue approach to three lanes as depicted on Condition Figure A. No building permits shall be issued for development that would result in a trip generation of greater than 1,100 vehicles in the p.m. peak hour (combined entering and exiting) until such traffic mitigation is implemented, unless same is deemed unnecessary by the Town Board based upon a change in traffic conditions.

Implementation of the aforesaid traffic mitigation measures will minimize potential impacts associated with the proposed action to the maximum extent practicable.

2. With respect to parking, parking analyses were conducted as part of the environmental review process administered by the Town Board. Based on the parking analyses and the projected parking demand from maximum theoretical development in accordance with the TOD District, parking ratios have been established in the TOD District that will ensure that there is sufficient parking to meet the demand. As the development/redevelopment of the Ronkonkoma Hub area contemplates that some existing commuter parking on the north side of the LIRR would be temporarily or permanently displaced, at the time an application is made to the Planning Board that includes commuter parking displacement, the applicant will be required to prepare and submit a plan that demonstrates that parking will be replaced at a minimum ratio of one-to-one. Such replacement parking must be in place prior to the displacement of existing designated commuter parking, and shall be acceptable to the MTA. Accordingly, implementation of the proposed action will not result in significant adverse impacts to parking.

3. In order to mitigate potential construction-related traffic impacts, at the time of site plan application, a construction traffic management and logistics plan would need to be submitted to the Planning Board for each site plan application. This plan would require the following: days/hours of proposed construction activity; designated routes of heavy vehicles to and from the site; parking areas for workers and heavy vehicles so as not to add to the burden on commuter lots; and construction staging areas. Implementation of proper construction management and logistics plans will serve to mitigate potential construction-related traffic impacts.

Air Quality

1. In order to evaluate air quality impacts that may be associated with the proposed action, an air quality analysis was conducted to screen the intersections in the area at a planning level. A microscale analysis was performed for the proposed development. The results of the microscale analysis demonstrate that all the carbon monoxide (CO) concentrations for the No Build, Build and Build with Improvements Scenarios would be below the one-hour and eight-hour CO National
Findings Statement
Town Board of the Town of Brookhaven
Ronkonkoma Hub Transit-Oriented Development
Page 31

Ambient Air Quality Standards (NAAQS). The results of the microscale analysis also demonstrate that all the 24-hour particulate matter with an aerodynamic diameter less than 10 microns (PM$_{10}$) concentrations for both the No-Build, Build and Build with Improvements Scenarios are below the 24-hour NAAQS for PM$_{10}$. Upon development/redevelopment, the Ronkonkoma Hub area is expected to include stationary sources, such as heating boilers, hot water heaters, and emergency generators. Because the project is conceptual in nature and design, the size and number of the stationary sources could not be identified as part of the SEQRA process. Accordingly, as any proposed stationary sources move ahead in the design process, the proposed development would obtain operating permits for appropriate equipment under the State of NYSDEC Division of Air Resources regulations (6 NYCRR Part 201), as may be required. The NYSDEC Division of Air Resources regulatory process would ensure that these emission sources meet the NAAQS. Also, in the event that an application is made for a NYSDOT work permit, air quality and energy/greenhouse gas analyses, as may be required, would be prepared in accordance with requirements presented in the NYSDOT Environmental Procedures Manual and related documents.

Moreover, the overall TOD project goals, which would reduce vehicular demand and, therefore, reduce air quality impacts, include:

- Redirected growth to the Ronkonkoma HUB area, which is already served by existing infrastructure
- Expanded transportation choices to reduce automobile dependence
- Reduced vehicle trips around the station
- Compact, mixed-use, transit-accessible, pedestrian-oriented redevelopment.

Thus, the overall impact of the implementation of the TOD would assist in reducing the potential for air quality impacts typically associated with development at a similar scale.

2. Construction and demolition activities associated with development/redevelopment of the Ronkonkoma Hub area would result in slight, temporary increases in air pollution emissions. In order to mitigate air quality impacts associated with construction, the following measures are proposed: use of emission controls on construction vehicles, dust control and regular sweeping of pavements.

Noise

1. Noise impact analyses were conducted, which evaluated the mobile (vehicular traffic and railroad) and stationary source (mechanical equipment) sound levels to determine the potential change in the existing sound levels for sensitive locations on and in the vicinity of the Ronkonkoma Hub area. Although traffic volumes on the roadways within the Ronkonkoma Hub area are projected to increase under the Build condition, it is not expected that the proposed action would increase noise levels by more than six dB(A) above existing noise levels. In fact, it is expected that based on the
potential increase in traffic volumes, the Build Condition sound levels would likely remain unchanged, as compared to the Existing Conditions. As such, it is not expected that the proposed action would result in significant adverse noise impacts.

2. The proposed action would result in changes in sound levels if rooftop mechanical equipment is installed. These changes are typically more noticeable during the nighttime period. Properties developed or redeveloped with rooftop equipment would be required to install rooftop equipment that does not exceed Town noise code standards, and same would be evaluated during site plan review.

3. Loading and service activities on parcels to be developed or redeveloped will be internally situated or screened to minimize noise associated with such activities from the surrounding residential areas.

4. Based on consultations with the LIRR, no residential development would be permitted south of Railroad Avenue between Hawkins Avenue and Mill Road. This would help ensure that future residents of the proposed development are not adversely impacted by LIRR operational noise.

5. Construction period activities may temporarily increase nearby sound levels due to demolition and regrading activities, and the use of machinery during the construction of the project. However, construction activities would be required to comply with the Town's noise ordinance. Furthermore, construction equipment would be required to have appropriate noise muffler systems, and excessive idling of construction equipment engines would be prohibited.

Socioeconomics

1. Implementation of the proposed action would result in various economic benefits during construction including direct expenditures on construction goods and services, and indirect and induced economic activity within the region. The total expected construction cost is $474 million. The construction period is projected to be approximately six years (based on information provided by the Master Developer), which would generate 1,953± full-time equivalent (FTE) construction jobs per year, or 11,700± FTE construction jobs over the anticipated build-out.

2. Significant long-term economic benefits would result from implementation of the proposed action. Development/redevelopment of the Ronkonkoma Hub area would require employees in numerous fields, and would provide employment opportunities to people in the surrounding area of the project site. It is expected that the proposed action would generate approximately 2,740 permanent jobs, based upon information provided by the Master Developer. Projected payrolls associated with these permanent jobs are anticipated to be over $96 million. Secondary earnings would be approximately $151 million and additional secondary jobs generated would be approximately 2,100.
3. With respect to tax revenues, implementation of the proposed action is expected to generate significant additional tax revenue (above the existing condition). The total projected property taxes based upon future development/redevelopment in accordance with the Maximum Density Concept Plan is $16,179,702±, which is an increase of $15,711,714± over the existing condition. With no changes in assessments, these rates are likely to increase over time. The Sachem Central School District and Library would be expected to receive over $11.1 million in annual property taxes. In addition, $5,045,625± in sales tax revenue is expected from the anticipated retail component and $410,395± in sales tax revenue is anticipated from the hotel component.

Community Facilities and Services

1. The Ronkonkoma Hub area is located within the jurisdiction of the Ronkonkoma Fire Department. In order to ensure that there would be no significant adverse impacts to the Ronkonkoma Fire Department, all development plans would be required to comply with New York State building and fire codes, and also be reviewed by the Brookhaven Fire Marshal. The Master Developer has met with the Fire Department and Fire Marshal and has indicated its intention to continue to work with the Fire Department throughout the development process. To ensure that this occurs, the “Conditions and Criteria Under which Future Actions will be Undertaken or Approved, Including Requirements for any Subsequent SEQRA Compliance,” set forth earlier in this Findings Statement, requires that the applicant(s) for each site plan submit confirmation to the Planning Board that the site plan has been submitted to the Ronkonkoma Fire Department for review. Future development/redevelopment of the Ronkonkoma Hub area would not be expected to result in significant adverse impacts to fire protection and ambulance services, provided by the Ronkonkoma Fire Department, as the $740,000± per year in additional property taxes generated at full build-out, would help offset costs associated with providing fire protection and ambulance services to the future development.

2. The Fourth Precinct of the Suffolk County Police Department currently services the Ronkonkoma Hub area, in addition to the MTA Police who service the Ronkonkoma LIRR Station. Based upon the analyses conducted, it is not expected that redevelopment of the Ronkonkoma Hub area would result in a demand that causes significant adverse impacts to police services. Furthermore, the anticipated annual property taxes received by the Police Department of over $2.1 million above the existing condition would help to offset the cost of providing additional police protection services that may be required to serve the future development within the Ronkonkoma Hub area.

3. The Ronkonkoma Hub area is served by the Sachem Central School District (CSD). Student enrollment within the Sachem CSD has been steadily declining over the last five school years and has declined overall since the 2005-06 school year. Based upon the projected unit type and bedroom mix, the 1,450 residential dwelling units included in the Maximum Density Concept Plan could potentially generate 214 school-aged children who would attend public school. Based on data in the New York State Education Department Property Tax Report Card for the 2013-14 school year, the per pupil expenditure in the Sachem CSD is projected to be $20,717±. While the total cost
Findings Statement
Town Board of the Town of Brookhaven
Ronkonkoma Hub Transit-Oriented Development
Page 34

to the Sachem CSD for the 214 additional children would be $4,433,438, the Maximum Density Concept Plan at full build-out could generate $11,178,342 annually to the school district. Therefore, there would be a net annual benefit to the Sachem CSD of approximately $6,744,904. Thus, based upon the enrollment and property tax information, implementation of the proposed action would not result in significant adverse impacts to the Sachem CSD. In fact, the District would be expected to receive a significant annual revenue benefit.

4. Development/redevelopment of the Ronkonkoma Hub area in accordance with the Maximum Density Concept Plan would generate approximately 377± tons of solid waste per month. The collection and disposal of solid waste generated by both the commercial properties, including the retail, office, and flex space uses and the private, multi-family residential developments shown on the Maximum Density Concept Plan, would be performed by licensed, private carters, which is typical practice for Long Island towns. Thus, the ultimate disposal locations are at the discretion of the carter, pursuant to its disposal agreements, and thus, would not be expected to result in significant adverse impacts to the Town’s waste management facilities, practices or plans.

Aesthetics

1. Implementation of the proposed action in accordance with the Land Use and Implementation Plan and the TOD District would improve the built environment with new and viable uses and upgrade public facilities and infrastructure, including, but not limited to, roads, sidewalks, curbs, public hardscape and landscape, street and walkway lighting, and parking areas, all of which contribute to the aesthetic character of the Ronkonkoma Hub area. Also, new outdoor spaces and streetscape improvements would be provided that would contribute to an attractive and inviting pedestrian environment. Moreover, the TOD District requires high quality streetscape design and landscaping, including a landscaped median within certain streets, which is an important feature for this type of urban-style neighborhood where the public street space becomes, in effect, the place for the social interactions that builds a sense of community. Accordingly, implementation of the proposed action would result in significant aesthetic benefits.

2. As several multi-story buildings are expected to be constructed, shadow analyses, before and after visual analyses from viewpoints within the project area, and line-of-sight analyses and renderings from various vantage points outside the Ronkonkoma Hub area were prepared. The shadow analyses demonstrate that no significant, sustained shadow impacts are anticipated. Based on the renderings, which depict potential development as contemplated in the Maximum Density Concept Plan, and the before/after analyses, the adoption of the Urban Renewal Plan, creation of the TOD District and the development/redevelopment of properties in accordance with the TOD District would result in beneficial impacts to the visual character of the area, as blighted and aesthetically unattractive properties would be replaced with new visually pleasing and cohesive development. Finally, the line-of-sight analyses demonstrate that views from the surrounding neighborhoods to the north and east to the potential future development within the Ronkonkoma Hub area would be obscured in many instances by existing development and/or mature trees.
One area where there would be a clear view from outside the Ronkonkoma Hub area is from the Ronkonkoma Avenue overpass (a public roadway) located to the southwest of the Hub, which is situated at a higher elevation than the proposed development. The rendering from that location shows that, upon implementation of the proposed action, there would be a more cohesive and improved visual quality from this vantage point (when compared to the existing condition), and blighted conditions would be eliminated by the proposed development/redevelopment.

3. In order to ensure that there will be positive impacts to the visual character of the Ronkonkoma Hub area, and no significant adverse impacts would result, the TOD District has incorporated design measures that must be complied with. Specifically, any proposed building must meet the requirements of the building configuration, alignment and parking placement for the subdistrict in which it is located, as set forth in the TOD District. Requirements for street assembly, streetscape improvements, designated outdoor spaces, signs and public supplementary lighting controls are specified in the TOD District. All development/redevelopment must conform to the specific requirements for the subdistrict in which it is located, and must also conform to the Regulating Plan.

4. With respect to cultural resources, throughout the SEQRA process, no significant historic or archaeological resources were identified within or adjacent to the Ronkonkoma Hub area that would be adversely impacted by the proposed action. Thus, no impacts to same will result from implementation of the proposed action.

In accordance with 6 NYCRR §617.11, the Town Board has considered the 2010 DGEIS, DSGEIS and FGEIS for the Ronkonkoma Hub Transit-Oriented Development, and certifies that it has met the requirements of 6 NYCRR Part 617. This Findings Statement contains the facts and conclusions in the 2010 DGEIS, DSGEIS and FGEIS relied upon to support this decision and indicates those factors that formed the basis of its decision.

A Copy of this Findings Statement has been sent to:

The Town Board of the Town of Brookhaven has considered the relevant environmental impacts, facts and conclusions disclosed in the FGEIS prepared for the project and has weighed and balanced relevant environmental impacts with social, economic and other considerations.

Having considered the DGEIS, DSGEIS and FGEIS, as well as supporting information and public comments received and the above written facts and conclusions relied upon to meet the requirements of 6 NYCRR § 617.11, the Town Board certifies that (1) the requirements of 6 NYCRR Part 617 have been met; and (2) consistent with social, economic and other essential considerations from among the reasonable alternatives available, the action is one that avoids or minimizes adverse environmental impacts to the maximum extent practicable, and that adverse environmental impacts will be avoided or minimized to the maximum extent practicable by incorporating as conditions to the decision those mitigative measures that were identified as practicable.

The above Findings Statement was approved and adopted by the Town Board of the Town of Brookhaven, One Independence Hill, Farmingville, NY 11738

Donna Lent, Town Clerk

06/24/2014

Date
RESOLUTION NO. 59 -2010, MAKING A SEQRA DETERMINATION IN CONNECTION WITH THE PROPOSED DEPARTMENT OF PUBLIC WORKS SEWER DISTRICT NO. 3 – SOUTHWEST-BERGEN POINT WASTEWATER TREATMENT PLANT EXPANSION, CP 8183, TOWN OF BABYLON

WHEREAS, the Suffolk County Council on Environmental Quality (CEQ) has reviewed a project designated as the "Proposed Department of Public Works Sewer District No. 3 – Southwest-Bergen Point Wastewater Treatment Plant Expansion, CP 8183, Town of Babylon", pursuant to Section 6 of Local Law No. 22-1985 which project involves the design of 10 MGD Plant Expansion within the existing plant. The recommended improvements are:

- Two (2) new 30 mgd variable speed drive raw wastewater pumps;
- Two (2) new 20 mgd variable speed drive raw wastewater pumps;
- Two (2) new 10 mgd variable speed raw wastewater pumps;
- Four (4) new primary settling tanks and associated systems;
- Four (4) new primary sludge pumps;
- Two (2) new scum ejectors;
- Four (4) new aeration tanks and associated systems;
- Three (3) new aeration blowers and associated systems;
- Two (2) new Waste Activated Sludge (WAS) pumps;
- Three (3) new Return Activated Sludge (RAS) pumps;
- One (1) new Secondary Clarifier and associated systems; and
- One (1) new Final Effluent Pump (included under the Outfall Replacement contract);
- Miscellaneous auxiliary improvements; and

WHEREAS, an Environmental Assessment Form (EAF) was prepared and submitted to the CEQ office by the Suffolk County Department of Public Works and a presentation was made by representatives from CDM/DBA Joint Venture and subsequently sent out to all concerned parties; and

WHEREAS, at its January 20, 2010 meeting, the CEQ reviewed the EAF and information submitted by the Suffolk County Department of Public Works; and

WHEREAS, the CEQ recommended that the above activity be considered an unlisted action, pursuant to the provisions of Title 6 NYCRR, Part 617 and Chapter 279 of the Suffolk County Code; and

WHEREAS, the CEQ has advised the County Legislature and the County Executive by memo dated January 20, 2010 of said recommendations; and

WHEREAS, Section 279-5(H) of the SUFFOLK COUNTY CODE requires the Presiding Officer to introduce legislation for an appropriate SEQRA determination; and

WHEREAS, the Suffolk County Legislature has reviewed the EAF and the CEQ recommendations; now, therefore be it

...
1st RESOLVED, that this Legislature hereby determines that the Proposed Department of Public Works Sewer District No. 3 - Southwest-Bergen Point Wastewater Treatment Plant Expansion, CP 8183, Town of Babylon constitutes an unlisted action, pursuant to the provisions of Title 6 NYCR, Part 617 and Chapter 279 of the Suffolk County Code, which project will not have significant adverse impacts on the environment for the following reasons:

1) The proposed action will not exceed any of the criteria in Section 617.7 of Title 6 NYCR, which sets forth thresholds for determining significant effect on the environment, as demonstrated in the Environmental Assessment Form;

2) The proposal does not appear to significantly threaten any unique or highly valuable environmental or cultural resources as identified in or regulated by the Environmental Conservation Law of the State of New York or the Suffolk County Charter and the Suffolk County Code;

3) The parcel does not appear to suffer from any severe environmental development constraints (limiting soil properties; no high groundwater and no unmanageable slopes); and

4) All necessary NYSDEC permits will be obtained;

and be it further

2nd RESOLVED, that a copy of this Resolution shall be filed with the Suffolk County Clerk, the initiating unit of said project, and with the CEQ; and be it further

3rd RESOLVED, that in accordance with Section C1-4(1)(d) of the SUFFOLK COUNTY CHARTER and Section 279-5(C)(4) of the SUFFOLK COUNTY CODE, the CEQ is hereby directed to prepare and circulate a SEQRA notice of determination of non-significance in accordance with this Resolution.

DATED: March 2, 2010

Future Potential Flow: 37.8 mgd

*This still leaves 2.2 mgd for other uses*
The proposed sewer line is designed to connect the Ronkonkoma Hub Development to the Southwest Sewer District. Once connected to the Southwest Sewer District the wastewater will be transported to Bergen Point Sewage Treatment Plant for treatment and discharge to the Atlantic Ocean. Below is a map showing the proposed route of the Force Main and Gravity Sewer line.

The proposed sewer line is designed to transport 1.5 million gallons per day. As indicated by the Ronkonkoma Hub Environmental Impact Statement the Ronkonkoma Hub development may result in up to 400,000 gallons per day in wastewater. This 400,000 gallons per day of wastewater is proposed to be transmitted by the proposed sewer line to Southwest Sewer District Number 3 for treatment. As noted in the Ronkonkoma Hub Findings Statement should the Ronkonkoma Hub development result in more than 400,000 gallons per day additional environmental review would be required. In addition 1,100,000 gallons per day may be utilized by a connection to the Town of Islip’s MacArthur Airport. The proposed sewer line may also allow for additional connections along and adjacent to the proposed sewer line. Additional capacity may also be available for connections along and adjacent to the sewer line in the Town of Brookhaven, the Town of Islip and the Village of Islandia. Any additional connections to the proposed sewer line will be required to be reviewed by the Suffolk County Sewer Agency. In addition land use development along and adjacent to the sewer line is controlled by the current zoning and the policies and plans of the applicable Town or Village.
Attachment G – Information regarding the passage of the sewer line through the Connetquot River Headwaters, Traffic and Road Restoration

Connetquot Crossing

The force mains traverse the east bound lane of Johnson Avenue and will cross the Connetquot Brook approximately 400 feet east of the entrance to Lakeland County Park. The brook at this point is a non-flowing portion of the upper headwaters of the Connetquot River that flows south approximately 1000 feet to Honeysuckle Pond. The area of the proposed crossing on Johnson Avenue has two 20” diameter drainage pipes located approximately 18”-24” below grade (top of pipe) that carries surface water from the north side of Johnson Avenue to the south side of Johnson Avenue. On three (3) site visits conducted during the design phase, there was no moving water noticed in the drainage pipes. The area on the north side of Johnson has a concrete channel that terminates at the roadway where the drainage pipes are located. It is likely that this open channel serves to collect rain and storm water and direct it to the drainage pipes and into the headwaters area.

While the construction of the force mains could be done using the open trench method, due to the relatively short distance (<100 feet) the use of pipe jacking technique will result in less disturbance to this area. The force main pipes will be located within the host pipe (the jacked pipe) with the annular space being filled with grout. The jacking process will be conducted within the eastbound traffic lane and not in the adjacent undisturbed wetland area. Once out of the low lying portion of Johnson Avenue, the force main installation would return to open cut construction. There is no estimated adverse impact to the headwaters as a result of the installation of the force main piping. As the force main piping is to be a high strength plastic, there will be no deterioration of the piping material due to exposure to groundwater.

Dewatering activities are expected to be of a limited and short duration for installing the force mains at this location. The General Contractor will be required to obtain a dewatering permit for the entire project. Dewatered groundwater will be subject to NYSDEC permit conditions that will require minimal turbidity prior to its return to the brook. Due to proximity to the adjacent freshwater wetlands an Article 24 Freshwater Wetlands will be required.

Traffic

The contract documents (Plans & Specifications) require the General Contractor to follow the specifications pertaining to the Maintenance and Protection of Traffic (MPT), Section 01526 of the Technical Specifications. The MPT requirements have been prepared in accordance with NYSDOT Federal Manual of Uniform Traffic Control Devices (MUTCD) Highway Work Zone Traffic Control. These specifications address both local roads (County and Town) as well as State (DOT) roads. The MPT specifications and drawings note the required means for lane closure, including signage, message boards and flag personnel. Additionally, drawings MPT 1- MPT 7 provide additional detail and notes pertaining to MPT. As per the contract documents, the roadways including the lane where construction is taking place will be backfilled or covered with traffic bearing steel plates at the end of each working day allowing for normal vehicular traffic. Vehicle access to all commercial entities, educational institutions, governmental offices and private residences will be provided for at all times during the construction as per the contract.
documents. Presently, the estimated work production for force main installation is estimated to be on the order of 200 linear feet per day.

Road Restoration – Village of Islandia

The force mains will traverse approximately 1 mile of roadways within the Village of Islandia. Some of these roadways have recently been repaved. The Village of Islandia has requested that the road restoration portion of the force main project require that the paving of the roadways that are impacted by the force main installation receive a full curb to curb pavement restoration. It is the intent of the County to require in the contract documents that a full curb to curb pavement restoration be required within the Village of Islandia limits. This would be for road segments on Old Nichols Road and Johnson Avenue. The segment of Suffolk Avenue between Sycamore and Veterans Highway within Islandia is a County road. Roadway restoration specifications will be in accordance with the respective Town, County and State requirements for roadways that the force main and gravity piping segments are to be installed.
Attachment H – Addendum to Part I

Page 2, Question C.1., The correct response to the question is “No” not “Yes”.

Page 2, Question C.2.a, The correct response to the question is “Yes” not “No” and the answer to the follow up question is “No”.

Page 3, Question C.3.d, No parks serve the project but it is noted that the proposed sewer line will be located in a right of way that is adjacent to Suffolk County’s Lakeland County Park.

Page 4, Question D.1.f – The proposed sewer line does not include any new residential uses but it will service the wastewater from the Ronkonkoma Hub Transit Oriented Development project which proposes up to 1,450 residential units.

Page 4, Section D.1.h.i – Revised the response to “wet well storage of sanitary wastewater generated by the proposed Ronkonkoma Hub Development”.

Page 6, Section D.2.e - Revised the response to “No” based on the pumping station on site being 0.26 acres and the estimated road opening in any one day being less than 2,000 square feet (0.05 acres).

Page 8, Section D.2.p.i – Revised response to “Bioxide for odor control, as required”.

MR. CHAIRMAN: Is this the one that has possibly NOAA funding?

MS. FISHER: There is -- I don't think this is the one. There is another -- I am not sure if it is this one, Larry. I think it's another one -- another in the vicinity.

MR. CHAIRMAN: Any comments?

(WHEREUPON, there was no response from the Council.)

MR. CHAIRMAN: Is there a motion?

MR. MACHTAY: Negative Declaration.

MR. CHAIRMAN: Motion from Richard Machtay.

Second?

MS. RUSSO: Second.

MR. CHAIRMAN: All in favor?

(WHEREUPON, the Council voted.)

MR. CHAIRMAN: Opposed?

(WHEREUPON, there was no response from the Council.)

MR. CHAIRMAN: Motion carries.

Is that it, Lauretta?

MS. LAURETTA FISHER: Yes.

MR. CHAIRMAN: Sewer District
Number 3, Southwest Bergen Point
Wastewater Treatment Plant Expansion,
Town of Babylon.

MR. WRIGHT: Ben Wright, Department of Public Works.

A couple of general comments before the consultant expands on what is in the environmental assessment form.

This project to expand Bergen Point Wastewater Treatment Plant is just for the plant to be expanded by 10,000,000 gallons a day. We haven't identified where the sewers would come from and where the service area expansion would be. The project does have support. It is in the capital program budget with $65,000,000 this year and, obviously, that lends the support of both the County Executive and the Legislature putting it in the program.

Attachment Number 4, does include a couple of items that indicate that support. The area that could be served would be a subject of a couple of RFP's that we will be sending out to look at
areas that are within the boundary or
adjacent to the boundaries of the
southwest sewer district, and that's
something over the next couple of years
that will be developed and identified
where that sewer would come from.

The process that we have to go
through concurrently and after a CEQ's
determination requires a report to be
sent to the Legislature for a public
hearing. We need a number of other
resolutions and an application from the
State Controllers Office which
determines whether or not the sewer
districts residents can bail the burden
of the cost associated with the
expansion $65,000,000.

The project is giving us assistance
to a joint-venture of Camp, Dresser,
McKee, Dvirka, and Bartilucci. The
representatives from Dvirka and
Bartilucci are Joe Marturano and Steve
Cabrera. Steve is just going to expand
on the project just to clarify some
items that may need clarification.
MR. CHAIRMAN: Ben, before you start, I was curious as to why you selected 10,000,000 gallons per day? If you're going to expand, why not --

MR. WRIGHT: Well, it started out that back in 2002 Public Works did a report looking at North Babylon, West Islip, Wyandanch, Deer Park, and Bayshore and to serve those areas was approximately 5,000,000 gallons a day. So when we first went out with the RFP to look at expanding things by 5,000,000 gallons a day, the geometry of the tanks and some of the loadings were incorporated into the plan and looked like we might need seven or eight so we rounded things up to 10,000,000. It was a little bit arbitrary, but the thought in our mind was still the areas most likely to be served would be those to the north of basically Southern State Parkway which is the northern boundary of Bergen Point.

MR. CHAIRMAN: So in another 10 years, you're not going to be back
asking to add another 10,000,000 gallons per day?

MR. WRIGHT: I can't say we're not, but the site is going to have some restrictions. There is some insertion technology that can be utilized to keep the same footprint and giving more capacity. So that's a possibility, but we are getting a little bit limited on the site itself.

MR. GULBRANSEN: Mr. Wright?

MR. WRIGHT: Yes.

MR. GULBRANSEN: The plant capacity has a plan to increase but how does that increase relate to the effluent level of discharge?

MR. WRIGHT: Well, DEC has to approve a permit modification. They have received the reports which is in the process of going through and getting their final approval on that, but they will also have to approve plan specifications. The effluent part of it -- the infrastructure that's there is sized for double the service area which
is more than enough capacity.

MR. GULBRANSEN: So physically you could do it, but the question now is will DEC think that the water body is similar to that extra load?

MR. WRIGHT: Yes.

MR. GULBRANSEN: We don't know that.

MR. CHAIRMAN: Plus the oceans. In that same vain, there has always been debate about the salinity of groundwater salinity of the Great South Bay increasing because of withdrawing water and then pumping it back into the ocean.

MR. WRIGHT: That's going to be the impact statement when the service areas are identified. Part of the RFP that we will be sending out will incorporate environmental phase. That is an issue that has to addressed at that point.

MR. CHAIRMAN: Thank you.

Anymore questions?

MR. MACHTAY: Maybe I missed it, but is there a need for this expansion now? In other words, the volume that's
going into the plant is greater than
what the plant can handle; right?

MR. WRIGHT: No, it isn't. We're
planning for the future.

MR. MACHTAY: Well, I guess my real
question is, is this a self-fulfilling
prophecy? You're going to make it
bigger so that the more development to
fill up the plant. It's like when they
build a highway, right? After they
build it, traffic comes; right?

MR. WRIGHT: Well, if you look at
the areas to the north of the service
area going from the Nassau/Suffolk line
out, most of that area is developed
already. It's not a matter of
stimulating more development.
Obviously, there could more growth and
growth inducement, but it's as much to
improving environment is to provide that
revitalization as necessary.

I did want to mention that part of
the support came from the County
Executive and the County Legislature
developing a sewer task force, and also
a RFP Committee. The task force had a number of meetings and hearings throughout the County to identify critical areas. The RFP Committee took the recommendations from that task force and developed an RFP that will be advertised next week, and that's to allow a better definition of the benefits of sewers and the improvements to the environment, as well as, the growth associated with it.

MR. MACHTAJ: Well, there are homes out there that are on cesspool that would be connected to the --

MR. WRIGHT: Yes. In fact, there is a new committee that was just formed in the North Babylon/Deer Park area. It's called Concerned Citizens for Sewers. They want sewers because they're dealing with their cesspool problems for so many years that it's unfathomable to them that they can't hook up to a sewer. We get calls everyday saying, "Are you going to sewer in Bayport? Are you going to sewer out
east further?" There is more
information in the media now and those
people are starting to call with the
interest.

MS. GROWNEY: The expansion then is
limited to the location on the site that
you're trying to handle has nothing to
do with the hooking up of other --

MR. WRIGHT: That's right. It is
just a plain expansion itself.

MR. KAUFMAN: Rich, one of the
concerns in the Town of Smithtown has
been that the town is very heavily
developed at this point in time, and we
have restrictions upon further
development because of waste water
issues. They're talking about expansion
of some of the sewer plants that we have
in the Town of Smithtown right now that
might not necessarily increase
footprints, but might allow for smart
growth and better development in the
area. So the policy question in that
sense is do we take some of the existing
buildings off of their cesspools and put
them onto sewer systems? Visibly a lot of the effluent would be going out to the Long Island Sound. There is right now a substantial fight going into the Sound in Kings Park -- the Nissequogue River. So the balance is to be made and they try to do the plan, obviously, using a planning director. You probably know that those issues exist.

MR. MACHTAY: Well, you talk about the need in North Babylon but does this extend to Melville in the industrial area?

MR. WRIGHT: There is quite a few connections along the Route 110 area already. I think we might have as many as 50 connections.

MR. MACHTAY: But they're private lines?

MR. WRIGHT: No, the County owns the lines going up Route 110 and some of the other areas. Any time more than one owner of a lot is involved with a sewer system, it's usually the County that has that responsibility.
MR. KAUFMAN: In this document also there was stuff in there that talked about the Route 110 Corridor. I know there had been discussions about expanding sewer capacity in there because right now there are limitations on what can occur in terms of development.

MR. CHAIRMAN: Legislator Vivian Fisher, welcome back.

MS. VIVIAN FISHER: Thank you. It is good to be back.

Ben, are these infrastructure improvements necessary if we're going to look at applications for the possibility of federal money coming to Suffolk County to help develop or sewer systems?

MR. WRIGHT: We have listed this project with the environmental facilities which does distribute both low interest loans and any stimulus funding. So it's on that list, but because the plant is doing so well in ranking is not as high as some facilities that have problems. So we're
low on the list. It's a good thing and
a bad thing, I guess, if you look at it
that way.

MR. CHAIRMAN: Gloria?

MS. RUSSO: Ben, Section 1, in
attachment three Expert Fire Engineering
Report, the introduction mentions the
actual flow, what it's designed for, and
it mentions the biological oxygen demand
and total maximum you're allowed and it
says here that they were exceeding for
about eight months or so --

MR. WRIGHT: In 2006, I believe, is
what it refers to.

MS. RUSSO: Yes, but it also says
that according to New York State
regulations NYPRR 29, "This designed for
loading exceeded for more than 8 ask
month and 2006 for plan future must be
submitted through New York DEC original
water manager." So is that the primary
motivating force for doing this?

MR. WRIGHT: No, this project was
initiated prior to that. As part of
this project, in 2007, we submitted a
growth plan with DEC. When you exceed that number -- it hasn't exceeded in the last two years, but for some reason we did back in 2006, but there is three different ways of satisfying the permit. There is a moratorium and a water conservation expansion. We happen to be in the expansion process. Plus probably at that time you're sending an RFP out, so we did satisfy one of those three criteria with the DEC. It wasn't initiated because of that, but it helped us that we were in the process with DEC.

MR. GULBRANSEN: There was mention earlier in this discussion about how the capacity expansion might allow for further development hookups for additional areas. Could you explain whether the expansion would also -- how you would decide how much the expansion could be dedicated to picking up places where we know where the septic systems are causing the groundwater loading into the bay as a documented problem? We recently read and recognized that the
Great South Bay has nitrogen loading
issues but isn't it true that this plant
could remove some nitrogen from the
system and these existing homes has
contracted with allowing for
development?

MR WRIGHT: If you went further to
the east, the areas that are really a
subject of the RFP are really filling in
the areas in Babylon and Islip from the
Nassau County line going east. So when
you go passed the Heckscher spur, there
are some other areas that are going to
be looked at individually, and it's
possible that they could make a
connection at some time in the future,
but that's really a process we have to
go through with the RFP to determine
that. Most of what's on the south shore
that's in the sewer district is already
connected. That's not going to assist
anything.

MR. CHAIRMAN: Any other questions?

Michael?

MR. KAUFMAN: In looking through
some of the evaluation material, I was
struck by one thing. It looks as if the
plant has adequate capacity right now,
but I know in the past around 2006 and
other times there have been problems
with under capacity, if you will. In
other words, trucks lining up and not
being able to deliver their loads and
things like that. Also, I am noting in
here that there seems to be -- what's
the right word for this -- there is not
much redundancy in the system. If part
of the system goes offline and say one
or two of the tanks just stop working or
some of the pumps stop working, there's
not that much redundancy in there and
the system will basically clog up. So
those are two observations and the
questions I have for you are, under this
plant, will there be more redundancy
built into the system so that if
something does go offline, the primary
system can still be operable?

MR WRIGHT: The answer to that is
we do have redundancy now. For example,
we usually use the aeration tanks. We
usually use seven of them, but there
will be more redundancy with the
expansion. The other part of your
question with the trucks --

MR. KAUFMAN: Before we get to
that, is that part of a purpose of this?

MR WRIGHT: No, it's part of -- you
have to have redundancy as part of the
recommended standards for regular
treatment.

MR. KAUFMAN: It's basic
engineering purposes.

MR. WRIGHT: Out of three aeration
blowers, we're using one. We have
standby and one that's ready to be used.
But on the truck issue, that's really
scavenger and septic and we have a
limitation of 500,000 gallons per day.
Some days are heavier than others. We
haven't had that experience for some
time now and part of it is due to the
private industry having the facility
where you can take leech aid in but
those trucks don't come to Bergen Point.
They get pretreated and discharged to
the sewer system, but they're basically
sanitary waste by the time they're
discharged.

MR. CHAIRMAN: Ben, go ahead with
your presentation.

MR. CABRERA: My name Steve
Cabrera. I am with the CDM/DB
Joint-Venture.

This upgrade is, I guess, the most
recent in a series of plan upgrades that
have occurred over the recent years that
have been subject to environmental
review. In this particular case, we
selected the coordinator review route
where we submitted a lead agency
coordination letter on October 5, to
potentially involved agencies and
solicited comments on any objections to
the County assuming lead agency status
or any objections to any of the
environmental concerns on the project
itself. It's now a comment period of
close to two months and we didn't
receive any comments from any of the
involved agencies on either of the lead
agency status or any particular
environmental concerns.

In a nutshell, the primary activity
at the plant that would involve
excavation or major disturbance all
occur, as Ben said, within the property
of the existing plant. There is no need
to expand the boundaries of the plant at
all and on this aerial photograph -- I
don't know how the yellow highlighted
shows up for those of you on the
opposite side of the table, but these
show the major areas where major
excavation will occur, and that will be
the area of the four foot tunnels of
primary tanks and the four proposed
aeration tanks and the proposed final
clarified here on the west. Now, as you
can see, all of these structures will be
adjacent to existing similar structures
in areas of the plant that are already
disturbed or graded or filled land or
dredge spoils.

After receiving no comments on the
environmental -- Part 1, of the
environmental assessment form, we
completed Part 2, and we then submitted
to you folks for your determination of
significance. We're not in or adjacent
to any sensitive significant habitats or
wetlands or wild scenic rivers or any
other significant environmental
resources. If there is any impact to
construction, it would be limited to the
construction period, but there is no
anticipated significant impacts that we
can see at this point.

That's pretty much it unless you
have any other questions. There are, in
addition to these major areas, where
there would be excavation where there
are variable speed drive pumps, et
cetera, that are associated with these
tanks that really don't take up very
much space but we just wanted to convey
here the major areas of the plant.

The project will require a permit
from New York State DEC for stormwater
discharge from construction activity
because the total area that would be
excavated will exceed one acre and that
triggers the need to obtain a permit
from DEC. There is a potential for a
wetlands permit that might be required
because we are within 300 feet of
wetland over here on the west but
generally speaking, the DEC's
jurisdiction for their wetland
regulation is restricted to any area of
a ten foot contour elevation, and we're
well above that. It is possible they
don't have jurisdiction but,
nevertheless, we would be conferring
with them to see if there is a permit
necessary. If there is a permit
necessary, it would be a permit for
construction within the adjacent area.
At this point, this would be considered
a general compatible project that would
simply require a permit.

MR. CHAIRMAN: Thomas?

MR. GULBRANSEN: Just a basic
question on the engineering.

You talked about the capacity
expansion and BOD expansion that might occur in the effluent when it gets approved, but can you generally describe how the plant expansion will result in a net removal of nitrogen through jetification or isn't it true we're doing more than just holding it in and pumping it out? This process is allowing the plant to remove nitrogen from the waste plant.

MR. CABRERA: Actually, the purpose of this project is not for denitrification.

MR. GULBRANSEN: It doesn't change nitrogen removal at all?

MR. CABRERA: As far as the actual quality, this project is not designed to improve F1 quality, but to guarantee that it achieves the permanent F1 requirements and limitations that are dictated by the permit to handle that additional flow. So what I am saying is the BOD limitations and the suspended solemn limitations, we expect would be identical to what they have now just
that it has the ability to handle more
flow and achieve those limitations based
on the increasing capacity, but it's not
for denitrification.

MR. CHAIRMAN: I don't think there
is any nitrogen as we end the -- there
is a kind of notion that --

MR. CABRERA: Not yet.

MR. GULBRANSEN: Right, but we know
that's coming now.

MR. WRIGHT: Just let me add that
there is a limitation on some nitrogen
seasonally. It is about 15 milligrams
per liter and we have it well underway.

MR. MARTURANO: Which we need that.

THE REPORTER: State your name?

MR. MARTURANO: Joe Marturano.

MR. CHAIRMAN: What's the method of
disinfection?

MR. MARTURANO: Right now it's
chlorination. So they would have to
chlorinate. The County is in the
process of designing a UV disinfection
system which will eliminate chlorine
residual in the discharge while
achieving the disinfection.

MR. CHAIRMAN: Eva?

MS. GROWNEY: So that's going to be part of this project?

MR. MARTURANO: It's not part of this project. It's a separate project that had --

MR. BAGG: The CEQ reviewed it already.

MR. MARTURANO: (Continuing) -- come before the CEQ.

MR. CHAIRMAN: Thank you. Any further discussion?

(WHEREUPON, there was no response from the Council.)

MR. CHAIRMAN: Do we have a motion?

MR. KAUFMAN: I'll make a motion of

Unlisted Negative Declaration.

MR. CHAIRMAN: Second?

MS. RUSSO: Second.

MR. CHAIRMAN: Discussions?

(WHEREUPON, there was no response from the Council.)

MR. CHAIRMAN: All in favor?

(WHEREUPON, the Board voted.)
MR. CHAIRMAN: Opposed?
(WHEREUPON, there was no response from the Council.)

MR. CHAIRMAN: Abstentions?
(WHEREUPON, there was no response from the Council.)

MR. CHAIRMAN: Motion carries.
Thank you.

MS. FISHER: If I could just make a correction to my statement before on Reeves Bay. It is going -- this is the one that is going to possibly get the funding from NOAA. It's going to be a 50/50 with the Town of Southampton and NOAA will reimburse the Town of Southampton's portion of the acquisition cost.

MR. CHAIRMAN: Just out of curiosity, what program of NOAA's -- I didn't realize they have property by activities that --

MS. FISHER: Let me just --

MR. CHAIRMAN: If you don't know --

MS. FISHER: Here, I've got it.

Minutes:

Minutes for the August 17, 2016, CEQ minutes were reviewed and discussed.

A motion was made by Mr. Kaufman to approve the August 17, 2016 minutes as amended. The motion was seconded by Ms. Growney. Motion carried.
Correspondence:
A letter was received from Edward Romaine, Supervisor of the Town of Brookhaven, regarding the Ronkonkoma Hub Development Sanitary Pumping Station and Force Main Piping Systems, Town of Brookhaven, Town of Islip and Village of Islandia. This letter was discussed during the project review of the Ronkonkoma Hub Sanitary Pumping Station and Force Main Piping System.

Public Portion:
None

Historic Trust Docket:
Director’s Report:

Mr. Martin updated the Council on the following:

- Housing Program:
  Mr. Martin noted that there is nothing new to report on the housing program. Suffolk County Parks is continuing to work on the interior renovations at Blydenburgh Cottage in Blydenburgh County Park.

- Custodial Agreements:
  Mr. Martin noted that there are no new updates on the custodial agreements. It was discussed that the Parks Department continues to work on the pending custodial agreements and they are moving forward.

Mr. Martin also noted that Meadow Croft County Park, is available for the October 19, 2016 CEQ meeting. Chairwoman Russo confirmed that the CEQ will hold the October 19, 2016 meeting at the Meadow Croft Estate in Sayville.

Project Review:
Recommended Unlisted Actions: (Taken Out of Order)

B. Proposed Ronkonkoma Hub Development Sanitary Pumping Station and Force Main Piping Systems, Town of Brookhaven, Town of Islip and Village of Islandia

John Donovan, Chief Engineer, Suffolk County Department of Public Works, and Gil Anderson, Commissioner, Suffolk County Department of Public Works gave a presentation on the project. The proposed project involves the construction of a sanitary pumping station and a seven mile long force main and gravity line piping system to convey the generated wastewater from the Ronkonkoma Hub Transit Oriented Development project to the Southwest Sewer District No. 3 and ultimately to the existing Bergen Point Sewage Treatment System. The project is also being designed to allow for possible future connections to the proposed pumping station and force main piping system.
Mr. Donovan noted that this project was previously before the CEQ in January, 2015 when the project was stopped due to issues the Village of Islandia had with the project. Mr. Donovan noted that the issues the Village of Islandia had with the project have been resolved and that Suffolk County is going to enter into an Intermunicipal Agreement with the Village to satisfy the Village’s concerns and insure that the Village will not oppose the project. Mr. Donovan also noted that the project information submitted by the Suffolk County Department of Public Works includes information to address the questions raised by the CEQ at the January, 2015 meeting.

As part of its project review the CEQ discussed the following topics:

- Mr. Kaufman asked for clarification regarding how the force main will be constructed through the Connetquot River Headwaters area. It was discussed that to minimize impacts either a pipe jacking process or direction drilling process will be used where the force main crosses the Connetquot River headwaters. It was also discussed that all work will be done in the existing road right-of-way.

- Chairwoman Russo summarized a letter received by the CEQ dated September 20, 2016 from the Town of Brookhaven Supervisor Edward Romaine regarding the project. The letter stated that the Town of Brookhaven is concerned about pumping the wastewater for the Ronkonkoma Hub development to the Southwest Sewer District instead of the original plan to a construct a Sewage Treatment Plant adjacent to the Ronkonkoma Hub Project. The letter also notes the Supervisor’s concern of groundwater being pumped out of the Magothy Aquifer and then being discharged as treated effluent to the ocean. Commissioner Anderson noted that the Suffolk County Department of Public Works has looked at the issue of replenishing groundwater and the issue of sending wastewater to the Bergen Point Sewage Treatment Plant. It was noted by Commissioner Anderson that there is a clay lens between the Upper Glacial Aquifer and the Magothy Aquifer. It was also noted that even at full buildout the 1.5 million gallons per day that will be pumped to the Bergen Point Sewage Treatment Plant still represents a very small percentage of water not being recharged back into the aquifer. Legislator Krupski also asked an additional question on the issue of groundwater recharge and overdrafting and whether the issue has been considered for this project. It was noted that the Suffolk County Department of Public Works spoke with Joe Pokorny the chief engineer for Suffolk County Water Authority which services the project area. Mr. Pokorny informed the Suffolk County Department of Public Works that he did not believe the amount of water being removed from the aquifer would have an impact on the Suffolk County Water Authority water supply wells. This was based on the magnitude of the wastewater flow being pumped to the Bergen Point Sewage Treatment Plant in comparison to the magnitude of a
Suffolk County Water Authority pumping well.

- The possibility of additional connections to the line was also discussed. It was noted that it will be possible for connections to occur along the line including in the Village of Islandia but there are no specific identified connections at this time. It was also noted that Suffolk County is working on the planning stages to consider connecting the McArthur Airport Industrial Park to the sewer line. Legislator Hahn noted that the possibility of other communities connecting to the proposed sewer line would result in the project having added environmental benefit.

- The CEQ also noted that there should be a few edits made to the EAF and that Mr. Kaufman would work with the staff to make these edits prior to the Legislature reviewing the EAF and making its SEQRA determination for this project.

- The Village Attorney, Mr. Prokop said that he would like to thank the County in their efforts in developing the IMA between the County and the Village but noted that the IMA has not yet been finalized. Mr. Prokop also asked that the Village’s original comments be taken into account when edits are made to the project EAF.

- The CEQ noted that while at this time the CEQ is reviewing this sewer connection project it is important that as Suffolk County considers future projects that the County have an overall long term strategy for sewer and wastewater treatment.

After the extended discussion a motion was made by Mr. Kaufman to recommend classification of the proposed project as an Unlisted Action with a Negative Declaration. The motion was seconded by Ms. Growney. Motion carried.

**Project Review:**

**Recommended Type 1 Actions:**

A. Proposed LT Michael P. Murphy Navy Seal Museum at Suffolk County’s West Sayville Golf Course Property, Town of Islip

Richard Martin, Director of Historic Services, Suffolk County Department of Parks, Recreation and Conservation, Dan Murphy, Father of LT Michael Murphy and Paul Dobiecki, Architect for the Navy Seal Museum gave a presentation on the project. The project involves construction of a new one story 10,500 square feet structure and a connected 70 foot tall tower to be located in a cleared area of the pinetum (pine tree area) at Suffolk County’s West Sayville Golf Course Property. The proposed structure will be used for a Navy Seal Museum as well as for a Navy Sea Cadet Corps Training Facility. The project also includes a new egress driveway to West Avenue, a new walkway with display areas and new vegetative plantings.

After discussion a motion was made by Mr. Kaufman to recommend classification of the proposed project as a Type 1 Action with a Negative Declaration. The
motion included that no ancillary equipment will be placed on the proposed museum tower. The motion was seconded by Legislator Hahn. Motion carried.

It was discussed that the CEQ as the Historic Trust also needed to do a separate resolution for the Suffolk County Historic Trust approval of the proposed LT Michael Murphy Navy Seal Museum at Suffolk County’s West Sayville Golf Course Property.

A motion was made by Mr. Kaufman to approve the proposed LT Michael Murphy Navy Seal Museum at Suffolk County’s West Sayville Golf Course with the provision that the applicant will continue to work with the Suffolk County Parks Department and the Suffolk County Historic Trust Committee on new landscaping and on the final design of the museum building. The motion was seconded by Hon. Hahn. Motion carried. Ms. Spencer abstained.

B. Suffolk County Wastewater Management Program for the Mitigation of Nitrogen Impacts from Wastewater Sources

Kenneth Zegel, Associate Public Health Engineer, Suffolk County Department of Health Services gave a presentation on the proposed project. The proposed project is for the approval and implementation of a County-wide wastewater program to mitigate nitrogen impacts emanating from wastewater sources. Mr. Zegel noted that the Suffolk County Department of Health Services plans to work with the CEQ and Legislature to complete a Generic Environmental Impact Statement (GEIS) for this project. It was also noted that the GEIS will include a public scoping session.

After discussion a motion was made by Mr. Kaufman to recommend classification of the proposed project as a Type 1 Action with a Positive Declaration. The motion was seconded by Ms. Growney. Motion carried.

Project Review:
Recommended Unlisted Actions:

C. Proposed Little Creek Stormwater Mitigation Project, Village of Patchogue

Frank Castelli, Environmental Projects Coordinator, Suffolk County Department of Economic Development and Planning and Joseph Dean, Superintendent of Public Works, Village of Patchogue gave a presentation of the proposed project. The proposed project involves the reconstruction of the drainage system at the south end of Little Creek to improve drainage capacity. This reconstruction involves the removal and replacement of a check valve vault and three 30” inch pipes with three new pipes to be anchored to the bay bottom. To facilitate collection and removal of debris a new headwall is also proposed to be constructed approximately 50 feet to the north of the bulkhead.
After discussion a motion was made by Mr. Kaufman to recommend classification of the proposed project as an Unlisted Action with a Negative Declaration. The motion was seconded by Ms. Growney. Motion carried.

D. Proposed Clean Lakes Patchogue Project - Patchogue Lake Aerator Installation, Village of Patchogue

Frank Castelli, Environmental Projects Coordinator, Suffolk County Department of Economic Development and Planning gave a presentation regarding the project. The proposed project involves the installation of four aerators in Patchogue Lake for the purpose of increasing the water current to oxygenate, aerate and improve the overall water quality of the Lake.

After discussion a motion was made by Mr. Kaufman to recommend classification of the proposed project as an Unlisted Action with a Negative Declaration. The motion was seconded by Ms. Growney. Motion carried.

E. Proposed Lake Agawam Stormwater Remediation Phase IV Project, Village of Southampton

Frank Castelli, Environmental Projects Coordinator, Suffolk County Department of Economic Development and Planning, and Lara Uribat with Nelson Pope & Voorhis gave a presentation on the proposed project. The proposed project involves the installation of a series of leaching pools along Culver Street and Ox Pasture Road in the Village of Southampton to reduce stormwater runoff to Lake Agawam. The drainage systems are proposed to be installed within the road right-of-ways and would not result in a change to impervious cover.

After discussion a motion was made by Mr. Kaufman to recommend classification of the proposed project as an Unlisted Action with a Negative Declaration. The motion was seconded by Ms. Growney. Motion carried.

F. Proposed Meadow Road Stormwater Management Project, Town of Smithtown

Frank Castelli, Environmental Projects Coordinator, Suffolk County Department of Economic Development and Planning and Allyson Murray, Environmental Planner, Town of Smithtown gave a presentation on the proposed project. The proposed project involves the construction of a bio-swale along Meadow Road to facilitate stormwater management of inputs to Mill Pond, the Nissequogue River and the Long Island Sound.

After discussion a motion was made by Mr. Kaufman to recommend classification of the proposed project as an Unlisted Action with a Negative Declaration. The motion was seconded by Ms. Growney. Motion carried.
A. Proposed Acquisition of Land Under the New Suffolk County Drinking Water Protection Program – Open Space Component – North Fork Preserve Addition – for the Alan S. Gorman DDS, PC 401K Plan Property, Town of Riverhead

Lauretta Fischer, Chief Environmental Analyst, Suffolk County Department of Economic Development and Planning gave a presentation on the proposed project. The project involves the acquisition of 5.591+ acres of land by Suffolk County under the New Suffolk County Drinking Water Protection Program and its dedication to the Suffolk County Parks Department in order to assure it remain in open space for passive recreational use.

After discussion a motion was made by Ms. Growney to recommend classification of the proposed project as an Unlisted Action with a Negative Declaration. The motion was seconded by Ms. Russo. Motion carried.

Project Review:

Recommendations for LADS Report:

Recommendations for Legislative Resolutions Laid on the Table September 7, 2016.

Mr. Corral noted that the staff’s SEQRA recommendations are listed on the September 7, 2016 LADS reports.

Mr. Kaufman made a motion to accept staff recommendations for the September 7, 2016 Legislative Resolutions. The motion was seconded by Ms. Growney. Motion carried.

Other Business:

Ms. Russo, Chair of the CEQ, welcomed and introduced the two newest CEQ Members Frank De Rubeis and Michael Doall.

CAC Concerns:

None

Meeting Adjourned
November 11, 2016

Hon. Legislator Kara Hahn  
Chairwoman  
Environment, Planning and Agriculture Committee  
Suffolk County Legislature  
William H. Rogers Building  
725 Veterans Memorial Highway  
Smihtown, NY 11787

Dear Chairwomen Hahn:

I am writing regarding I.R. 1933-16 “Making SEQRA determination in connection with proposed Ronkonkoma Hub Development Sanitary Pump Station and Force Main” that is before the Environment, Planning and Agriculture Committee on November 14th 2016.

Water Authority staff had discussed this project and its potential impact to the aquifer and our well fields in the Ronkonkoma area with Suffolk County Wastewater Management staff prior to the Council on Environmental Quality’s approval. Water Authority staff indicated, under the present proposal, a de minimus impact on the aquifer and our ability to provide drinking water in the Ronkonkoma capture zone.

Upon further analysis by our Engineering staff, including a Geologist and Hydrogeologist, our conclusions have not changed. The loss of recharge will not significantly impact our ability to meet future demand. However, I should note, the Water Authority’s review focused on our ability to meet long term demand from a purely drinking water perspective.

Please feel free to contact me should you have any questions. I appreciate you considering these thoughts.

Sincerely,

[Signature]

Jeffrey Szabo

Subject: Evaluation of Transfer of Sanitary Wastewater from Ronkonkoma Hub and MacArthur Industrial Park to the Bergen Point WWTP

1.0 Background

Suffolk County residents depend completely on groundwater for their potable water supply. Consequently, Suffolk County has long recognized the importance of protecting the aquifer system from contaminants that may be introduced by human activity, such as sanitary wastewater. In particular, Suffolk County has studied the issue of nitrate contamination from wastewater management for decades.

All groundwater within the County's aquifer system originates as precipitation that recharges down through the ground surface and unsaturated zone to the underlying aquifer. The recharging precipitation can carry dissolved contaminants that are introduced by human activity down to the aquifer. Sanitary wastewater throughout most of the County is currently discharged to on-site wastewater systems, that are typically either septic systems or cesspools. Sanitary wastewater discharged to the groundwater can introduce a variety of contaminants to the environment, including nitrogen, pathogens and other contaminants such as volatile organic compounds (VOCs), phosphates and pharmaceuticals and personal care products (PPCPs).

In response to the need to protect groundwater quality and the County's water supply, Suffolk County has established sanitary sewer districts in some of the most densely developed parts of the County, and has constructed systems to collect and treat wastewater and to discharge the treated wastewater to either ground or surface waters. The largest of the County's sewer districts is Sewer District No. 3, Southwest. Suffolk County Department of Public Works (SCDPW) owns and operates the Bergen Point Wastewater Treatment Plant (WWTP) that is currently permitted to treat up to 30.5 million gallons per day (MGD) of sanitary wastewater from the Southwest Sewer District (SWSD) and contractees. Treated effluent from the Bergen Point WWTP is discharged several miles offshore to the Atlantic Ocean.

Suffolk County’s surface water resources are also groundwater fed. In fact, in undeveloped areas, it is estimated that streams received up to 95 percent of their fresh baseflow from groundwater. The impacts of groundwater quality on downgradient surface water quality have received increased
attention in recent years, as increased nitrogen levels in area surface waters have been linked to nitrate levels in the groundwater contributing areas. The need to reduce nitrogen loading to the County's surface water features has underscored the need to reduce the nitrogen loading to upgradient groundwater resources.

Recognizing the need to protect the environment, and responding to community requests for downtown re-development and more affordable housing while continuing to protect the County's groundwater supply, Suffolk County has worked to identify areas where investment in sanitary sewers and treatment facilities could provide environmental, economic and/or social benefits. These areas include the Ronkonkoma Hub and the MacArthur Industrial Park. SCDPW's plans to provide wastewater collection and treatment for development at the Ronkonkoma Hub and MacArthur Industrial Park (please see Figure 1) include conveyance of up to 1.6 MGD of sanitary wastewater from the study area to the Bergen Point Wastewater WWTP in West Babylon for treatment and discharge to the ocean.

Figure 1 Project Study Area

Provision of wastewater treatment will help to protect groundwater quality in and downgradient of the Ronkonkoma Hub and MacArthur Industrial Park study area. However, potential impacts to downgradient water quantity must also be considered, as sewering would convey up to 1.6 MGD that would have been returned to the aquifer via on-site wastewater systems out of the study area,
locally reducing recharge to the aquifer. The purpose of this modeling evaluation is to assess the impacts of conveying 1.6 MGD of water that will be pumped from the aquifer and conveyed to the Bergen Point WWTP and offshore discharge on both the groundwater table, and on downstream surface water resources.

The Ronkonkoma Hub/MacArthur Industrial Park study area is currently served by Suffolk County Water Authority (SCWA) and is primarily located within their Central Island Intermediate pressure zone (zone 12) with southern portions within the South Shore Low pressure zone (zone 1b). The SCWA Lincoln Avenue wellfield is immediately to the east of the study area and may be suitable to meet additional demand (Table 1; Figure 2).

The Main Body flow model assumes recharge to developed properties within each water supply distribution zone. Currently, approximately 0.7 MGD is returned to the aquifer within the study area as simulated in the Main Body groundwater flow model. Additional development in the Ronkonkoma Hub/MacArthur Industrial Park area is projected to increase water use to 1.6 MGD.

Monthly pumpage from the Lincoln Avenue Wellfield from 2012-2013 is shown on Figure 3. For purposes of this evaluation it has been assumed that the Lincoln Avenue Wellfield would provide the additional supply.
Figure 2 SCWA Pressure Zones and Wells Surrounding the Ronkonkoma Hub/MacArthur Industrial Park Study Area

The existing groundwater flow model simulates approximately 0.7 MGD of recharge in the study area. Therefore, an additional 0.9 MGD would be required from the Lincoln Avenue Wellfield (of which 85% of winter pumping is recharged to the aquifer).

2.0 Modeling Approach
Suffolk County developed and calibrated a three-dimensional groundwater model to evaluate the impacts of construction and operation of
the SWSD on groundwater levels and stream baseflows in 1996. Model development, calibration and application were accomplished in a collaborative process with Suffolk County Department of Health Services (SCDHS), Suffolk County Water Authority (SCWA), SCDPW, Suffolk County Department of Economic Development and Planning and New York State Department of Environmental Conservation (NYSDEC). Since that time, the Suffolk County groundwater model has been used to support a wide variety of water resource planning, investigation and design projects. Through the years, the model has been updated and refined to add additional discretization and updated information.

Most recently, the Main Body Flow model was updated as part of the Suffolk County Comprehensive Water Resources Management Plan (2015). Updates to the model included refinement of the finite element grid to reduce node spacing to several hundred feet. For consistency with the ongoing Subwatersheds Wastewater Plan modeling work, average annual 2012-2013 community water supply pumping rates and long term average precipitation data were used to characterize water supply pumping and recharge. The remainder of the model framework (e.g., stratigraphy, hydrogeologic properties, boundary conditions) is consistent with previous versions of the calibrated model.

The updated Main Body groundwater flow model was then used to estimate the impacts of transferring up to 1.6 MGD of sanitary wastewater from the Ronkonkoma Hub/MacArthur Industrial Park study area to the Bergen Point WWTP for treatment and ultimate discharge to the Atlantic Ocean upon:

- The groundwater table
- Downgradient stream baseflows
- Downgradient stream headwaters locations

3.0 Model Results
3.1 Existing (Baseline) Conditions

The simulated average annual groundwater table under baseline conditions is depicted by Figure 4. As shown, the average water table ranges from approximately 40 feet above mean sea level in the northern part of the Ronkonkoma Hub/MacArthur Industrial Park study area to mean sea level at the coastline. Figure 4 also shows the simulated average start of flowing stream (stream headwaters) locations for downgradient streams:

- Connetquot Brook
- West Brook
- Middle Brook
- Rattlesnake Brook
- Green Creek
- Brown Creek
- Tuthills Creek and
- Patchogue River (and tributaries).

Figure 4 Simulated Water Table under Baseline Conditions Showing Model Nodes that Discharge as Baseflow to Streams
Stream baseflows (e.g., the streamflow derived from groundwater) are summarized on Table 2. Only one of the streams is currently gaged by the USGS, the Connetquot Brook. The long-term average flow at Connetquot Brook is 21 cubic feet per second (cfs; http://waterdata.usgs.gov/ny/nwis/current/?type=flow&group_key=basin_cd). The gaging station for Connetquot Brook is upstream of the location where the total baseflow shown in Table 2 is simulated. The simulated baseflow to Connetquot Brook at the location of the gaging station is 18 cfs; after accounting for the stormwater runoff contribution, the simulated baseflow is a reasonable representation of measured stream flow.

Projected Post-Sewering Conditions

The projected average annual groundwater table after sewering is implemented is depicted in Figure 5. As shown, the average water table is projected to decline slightly within and downgradient of the Ronkonkoma Hub/MacArthur Industrial Park study area. Figure 6 shows that the maximum projected decline in groundwater elevation is projected to be less than 1 foot.

The water table elevation or depth to groundwater varies both seasonally and annually in response to changing precipitation. The effect of a decline in water table or increased depth to groundwater is a site-specific issue. In general, a long-term decline in groundwater elevation is of most concern where the water table is close to the ground surface and where it impacts wetlands or surface water features. Suffolk County’s previous field work at wetlands sites within the SWSD and at a control site to the east of the SWSD showed that wetlands vegetation was most sensitive to depth to groundwater. The fresh surface water features downgradient of the proposed Ronkonkoma Hub/MacArthur Industrial Park area are also groundwater fed; e.g. the streams are fed by groundwater where the water table intersects the ground surface.

Assuming that the SCWA Lincoln Avenue wellfield provides the increased potable supply to support the proposed development to the Ronkonkoma Hub/MacArthur Industrial Park, the maximum predicted decline of approximately 0.8 feet would occur in an area where the depth to groundwater...
Figure 5 Simulated Water Table under Sewered Conditions for the Ronkonkoma Hub/MacArthur Industrial Park Study Area
Figure 6 Simulated Water Table Decline Due to Sewering the Ronkonkoma Hub/MacArthur Industrial Park Study Area with 1.6 mgd Removed from the Aquifer

is currently over 50 feet and the aquifer thickness is over 1500 feet; the predicted additional decline is not expected to have any noticeable impact. As shown by Figure 7, water levels in a USGS monitoring well located just downgradient of the airport have varied by up to 8 feet over the past few decades as a result of natural variations in precipitation and seasonal recharge through the years.
Further south, the smaller predicted declines in the water table (e.g., less than 0.2 feet) are predicted to result in reductions to minor changes in stream baseflows and lengths of flowing stream as described below.

Evaluation of the impacts of sewer ing the Ronkonkoma Hub and MacArthur Industrial Park on water levels within Lake Ronkonkoma were not part of this study. Under the conditions simulated, the groundwater model projects a water table decline of between 0.2 and 0.4 feet near the Lake. It is not clear whether this would result in a similar decline in lake levels; a more detailed assessment considering the Lake bathymetry would be required.

Figure 8 shows the projected simulated average start of flowing stream (stream headwaters) locations for the downgradient streams as compared to baseline conditions. As shown, the most significant impact is projected for tributaries to Patchogue River, where the headwaters are simulated to move downstream of baseline conditions for both a tributary to Patchogue River and West Brook. Projected stream baseflows (e.g., the streamflow derived from groundwater) after the sanitary sewer ing program is completed are summarized on Table 3. The most significant impact is projected to occur at Patchogue River, Tuthills Creek, Connetquot Brook and West Brook where average annual groundwater baseflow is projected to decrease by approximately 2 percent.

</table>
The reductions in stream baseflow predicted to result from sewering would be overshadowed by seasonal changes in precipitation and recharge and would not be readily observed, as illustrated by Figure 9, which shows the variation in Connetquot Brook discharge over the past several years.

Figure 9 – Natural Variation in Connetquot Brook Discharge Downgradient of the Proposed Ronkonkoma Hub/MacArthur Industrial Park (Source: http://waterdata.usgs.gov/ny/nwis/current/?type=flow&group_key=basin_cd)

The predicted changes in length of flowing stream are very sensitive to the ground surface elevation assigned by the model. For longer streams in Suffolk County, changes in start of flow of thousands of feet throughout the year as a result of natural variation in precipitation and the resulting groundwater table have been observed. Suffolk County monitored several streams within the SWSD before sewers were constructed. The monitored start of flow locations prior to sewering showed that the difference between maximum and minimum headwaters locations could vary by over a mile as a result of annual and seasonal variations in precipitation.

Conclusions
The provision of sanitary sewers for the proposed Ronkonkoma Hub and MacArthur Industrial Park areas will protect groundwater quality from nitrates and other contaminants introduced to the groundwater from on-site wastewater disposal systems. The groundwater modeling evaluation of
sewering the Ronkonkoma Hub/MacArthur Industrial Park predicts a potential localized groundwater table decline of approximately 0.8 feet. The predicted decline is negligible with respect to the total aquifer thickness of over 1500 feet and would be overshadowed by both annual variations in groundwater levels resulting from varying precipitation and seasonal variations in groundwater levels resulting from varying recharge. The predicted water table decline is not anticipated to have any impact on the public water supply or on downgradient Suffolk County Water Authority wells.

The simulated water table declines are predicted to result in minor reductions to stream baseflows of between 1.3 and 2.4 percent. These predicted reductions in stream baseflow are much smaller than the changes that typically occur in a stream as a result of varying precipitation, seasonal recharge and stormwater runoff.

This evaluation was conducted using the regional groundwater model and assumed conditions of future water supply pumping. Future impacts to the groundwater table and downgradient streams may vary if the future water supply is derived from a different location. The modeling evaluation did not incorporate the predicted effects of the trends in increasing precipitation and high intensity storm events in the New York area, nor the effects of on-going sea level rise, both of which are predicted to increase the groundwater table in coastal areas, and result in increased baseflows to south shore streams.
Question 4 – Impact on Groundwater

The Part 2 – EAF correctly indicates that implementation of the proposed action will not result in significant adverse impacts to groundwater. Despite the fact that the impact of discharge of treated wastewater from Suffolk County Southwest Sewer District No. 3 (SCSD 3) has been evaluated as will be explained below, there have been assertions made that the proposed action may adversely affect groundwater as it would contribute to the depletion of groundwater necessary for water supply. Accordingly, this Part 3 – EAF has been prepared to set forth the underlying documentation supporting the conclusion that no significant adverse impact to groundwater would result from the proposed action.

First, Suffolk County retained CDM to assess the transfer of sanitary wastewater from Ronkonkoma Hub and MacArthur Industrial Park to the Bergen Point WWTP (see Attachment I of the EAF Part III). Key findings included:

“The provision of sanitary sewers for the proposed Ronkonkoma Hub and MacArthur Industrial Park areas will protect groundwater quality from nitrates and other contaminants introduced to the groundwater from on-site wastewater disposal systems. The groundwater modeling evaluation of sewering the Ronkonkoma Hub/MacArthur Industrial Park predicts a potential localized groundwater table decline of approximately 0.8 feet. The predicted decline is negligible with respect to the total aquifer thickness of over 1500 feet and would be overshadowed by both annual variations in groundwater levels resulting from varying precipitation and seasonal variations in groundwater levels resulting from varying recharge. The predicted water table decline is not anticipated to have any impact on the public water supply or on downgradient Suffolk County Water Authority wells.

The simulated water table declines are predicted to result in minor reductions to stream baseflows of between 1.3 and 2.4 percent. These predicted reductions in stream baseflow are much smaller than the changes that typically occur in a stream as a result of varying precipitation, seasonal recharge and stormwater runoff.

The reductions in stream baseflow predicted to result from sewering would be overshadowed by seasonal changes in precipitation and recharge and would not be readily observed.”

In addition, the Suffolk County Department of Health Services (SCDHS) has reviewed the CDM Smith Memorandum Dated November 21, 2016 and entitled “Evaluation of Transfer of Sanitary Wastewater from Ronkonkoma Hub and MacArthur Industrial Park to the Bergen Point WWTP.” The SCDHS believes that the groundwater model used in the evaluation represents the most
current, state-of-the-art, groundwater modeling tool available in Suffolk County. In addition, SCDHS agrees with the methodology and conclusions provided in the memorandum and concurs that:

- The use of sanitary sewers for the proposed Ronkonkoma Hub and MacArthur Industrial Park projects will protect groundwater quality from nitrates and other contaminants currently introduced through on-site wastewater disposal systems within the project area.

- The predicted change in groundwater table elevation are negligible and would be overshadowed by both annual variations in groundwater levels resulting from varying precipitation and seasonal variations in groundwater levels resulting from varying recharge; and,

- The predicted water table decline will not have a measurable impact on the availability of public water or stream baseflow when compared to natural seasonal variation.

The Suffolk County Water Authority has also advised Hon. Legislator Kara Hahn, Chairman of the Suffolk County Environment, Planning and Agriculture Committee in a November 11, 2016 dated letter to that “Water Authority staff indicated, under the present proposal, a de minimus impact on the aquifer and our ability to provide drinking water in the Ronkonkoma capture zone.” (see Attachment I of the EAF Part III).

Moreover, the SEQRA review of the expansion of SCSD 3 by the Suffolk County Department of Public Works entitled “Making a SEQRA determination in connection with the proposed Department of Public Works Sewer District No. 3 – Southwest-Bergen Point Wastewater Treatment Plant Expansion, CP 8183, Town of Brookhaven” indicates that the project constitutes an Unlisted Action that will not have significant adverse impacts on the environment. (see Attachment D of the EAF Part III)

Finally, the Suffolk County CEQ evaluated the impact of this proposed action at its meeting on September 21, 2016. As part of its project review the CEQ discussed the following topics:

- The CEQ asked for clarification regarding how the force main will be constructed through the Connetquot River Headwaters area. It was discussed that to minimize impacts either a pipe jacking process or direction drilling process will be used where the force main crosses the Connetquot River headwaters. It was also discussed that all work will be done in the existing road right-of-way.

- The CEQ Chairwoman Russo summarized a letter received by the CEQ dated September 20, 2016 from the Town of Brookhaven Supervisor Edward Romaine regarding the project. The letter stated that the Town of Brookhaven is concerned about pumping the wastewater for the Ronkonkoma Hub development to the Southwest Sewer District instead of the original plan to a construct a Sewage Treatment Plant adjacent to the Ronkonkoma Hub Project. The letter also notes the Supervisor’s concern of groundwater being pumped out of the Magothy Aquifer and then being discharged as treated effluent to the ocean. Commissioner Anderson noted that the Suffolk County Department of Public Works has looked at the issue of replenishing groundwater and the issue of
sending wastewater to the Bergen Point Sewage Treatment Plant. It was noted by Commissioner Anderson that there is a clay lens between the Upper Glacial Aquifer and the Magothy Aquifer. It was also noted that even at full buildout the 1.5 million gallons per day that will be pumped to the Bergen Point Sewage Treatment Plant still represents a very small percentage of water not being recharged back into the aquifer. Legislator Krupski also asked an additional question on the issue of groundwater recharge and overdrafting and whether the issue has been considered for this project. It was noted that the Suffolk County Department of Public Works spoke with Joe Pokorny the chief engineer for Suffolk County Water Authority which services the project area. Mr. Pokorny informed the Suffolk County Department of Public Works that he did not believe the amount of water being removed from the aquifer would have an impact on the Suffolk County Water Authority water supply wells. This was based on the magnitude of the wastewater flow being pumped to the Bergen Point Sewage Treatment Plant in comparison to the magnitude of a Suffolk County Water Authority pumping well.

- The CEQ discussed the possibility of additional connections to the sewer line. It was noted that it will be possible for connections to occur along the line including in the Village of Islandia but there are no specific identified connections at this time. It was also noted that Suffolk County is working on the planning stages to consider connecting the McArthur Airport Industrial Park to the sewer line. The CEQ also discussed the possibility of other communities connecting to the proposed sewer line would result in the project having added environmental benefit.

- The CEQ noted that while at this time the CEQ is reviewing this sewer connection project it is important that as Suffolk County considers future projects that the County have an overall long term strategy for sewer and wastewater treatment.

Subsequent to those deliberations, the CEQ concluded that implementation of the proposed action would not result in significant adverse impacts to groundwater or the water supply.

Based on the foregoing and the annexed supporting documents, it is clear that implementation of the proposed action will not result in significant adverse impacts to groundwater nor will it result in significant adverse impacts to the water supply.

It should also be noted that the Town of Brookhaven Town Board, in its Final Generic Environmental Impact Statement for the Proposed Ronkonkoma Hub Transit-Oriented Development (FGEIS), which was filed by the aforesaid Town Board on May 22, 2014, addressed the potential discharge of sanitary sewage from the Ronkonkoma Hub to an expanded SCSD 3, to wit:

“Response C12-6:

When first conceived, and as explained and analyzed in the 2010 DGEIS,[1] the revitalization of the Ronkonkoma Hub area included the construction of an STP within the Town of Brookhaven to solely serve the Ronkonkoma TOD. The 2010 DGEIS explained, among other things, that the then-contemplated Ronkonkoma TOD included the construction of an STP, which was shown, at that time, in the southeast portion of the Ronkonkoma Hub area (see Figure 24 in the 2010 DGEIS). Based on the program mix in
the 2010 DGEIS, the projected sanitary waste volume from then-anticipated new development within the Ronkonkoma TOD was 169,000 gpd (see Section 4.2 of the 2010 DGEIS). However, the STP was, at that time, proposed to be sized to accommodate all land uses within the Ronkonkoma TOD area (projected new development plus existing development served by on-site sanitary systems). Based on the approximately five-acre land area on which the STP was proposed to be situated, that facility would have been capable of treating 275,000 gallons of sanitary waste per day. An analysis for the STP originally contemplated by the Town of Brookhaven was prepared and included in Appendix D of the 2010 DGEIS.

Since the time of preparation of the 2010 DGEIS (and as explained in Section 2.3 of the DSGEIS),[2] Suffolk County proposed to establish a sewer district and construct a STP on a 7.74-acre property, south of the LIRR tracks, opposite the southeastern portion of the Ronkonkoma Hub area. As part of the development of a new STP, the County was proposing to form a new sewer district, which would accommodate sewage from the Ronkonkoma Hub area as well as from unsewered areas within the Town of Islip. The new STP was proposed to be sized with an initial capacity of 500,000 gpd with the ability to expand to 750,000 gpd. The capacity was established based upon the approximately 400,000 gpd anticipated for future development within the Ronkonkoma Hub area, plus an additional 100,000 gpd for future connections in the Town of Islip, including, for example, potential future connections to MacArthur Airport. In addition, provisions for an additional 250,000 gpd (for a total capacity of 750,000 gpd) were being considered to accommodate potential future growth within the sewer district.

As explained at the DSGEIS hearing, Suffolk County is currently exploring another option to handle sewage from the Town of Islip and the Ronkonkoma Hub. This option consists of transporting sanitary waste from Ronkonkoma Hub through a force main system connecting to the Southwest Sewer District No. 3 (SWSD#3), where it will be treated and disposed of (see correspondence dated March 10, 2014 from Gilbert Anderson, P.E., Commissioner of the SCDPW in Appendix G of this FGEIS).

As explained by Commissioner Anderson (see Appendix G)[3], the SCDPW “will be exploring the potential of connecting adjacent communities. The capacity of the current system will be sized to handle flows up to 1 million gallons per day. 400,000 gallons per day capacity will be reserved for Ronkonkoma Hub. The remaining 600,000 gallons per day is currently available for either Town to connect to. Discussions have begun with the Town of Islip who is very interested in connecting the Airport and possibly other nearby areas to the facility.” The regional sewage issue is a Suffolk County issue, and Suffolk County is responsible for complying with SEQRA and its implementing regulations and any other applicable laws and regulations.”

Nothing in the Brookhaven Town Board’s FGEIS (or its entire SEQRA record) raises any concerns with respect to groundwater or water supply impacts relating to the option of the handling of sewage from the Ronkonkoma Hub by an expanded SCSD 3.
Also noteworthy is that, in its evaluation of groundwater impacts in the Town Board’s Findings Statement for the Ronkonkoma Hub, the Brookhaven Town Board discussed the potential handling of sewage from the Ronkonkoma Hub at an expanded SCSD 3. In this regard, the Findings Statement, adopted by the Brookhaven Town Board on June 24, 2104, states, in pertinent part:

“With respect to sanitary flow, the projected sanitary flow upon implementation of the proposed action and full development/redevelopment of the Ronkonkoma Hub area in accordance with the TOD District, is approximately 400,000 gpd. As this flow exceeds what would be permitted by Article 6 of the Suffolk County Sanitary Code in the Ronkonkoma Hub area if such sanitary flow was handled by on-site sanitary systems, connection to an STP is required. . .

Subsequent to preparation of the 2010 DGEIS and the DSGEIS, and as explained at the DSGEIS hearing and in the FGEIS, Suffolk County is currently exploring another option to handle sewage from the Town of Islip and the Ronkonkoma Hub. This option consists of transporting sanitary waste from the Ronkonkoma Hub through a force main system connecting to the Southwest Sewer District No. 3 (SWSD#3), where it will be treated and disposed of. According to SCDPW Commissioner Anderson, the SCDPW ‘will be exploring the potential of connecting adjacent communities. The capacity of the current system will be sized to handle flows up to 1 million gallons per day. 400,000 gallons per day capacity will be reserved for Ronkonkoma Hub. The remaining 600,000 gallons per day is currently available for either Town to connect to. Discussions have begun with the Town of Islip who is very interested in connecting the Airport and possibly other nearby areas to the facility.’

To ensure that no significant adverse impacts result from sanitary sewage generated from development/redevelopment within the Ronkonkoma Hub area, applicants for development/redevelopment therein will be required to provide a letter of sewer availability/connection approval (or documentation from the appropriate regulatory agency as to the approved method of sanitary discharge) to the Planning Board prior to final site plan approval.”

[3] Refers to Appendix G of the Town’s FGEIS
CEQ RESOLUTION NO.  36-2016, AUTHORIZING ADOPTION OF AUGUST 17, 2016 CEQ MINUTES

WHEREAS, the Council on Environmental Quality has received and reviewed the August 17, 2016 meeting minutes; now, therefore, be it

1st RESOLVED, that a quorum of the Council on Environmental Quality, having heard and accepted all comments and necessary corrections hereby adopts the meeting minutes of August 17, 2016.

COUNTY OF SUFFOLK

MEMORANDUM

TO: Honorable Steven Bellone, Suffolk County Executive
    DuWayne Gregory, Presiding Officer

FROM: Gloria Russo, Chairperson

DATE: September 28, 2016

RE: CEQ Review of the Proposed Ronkonkoma Hub Development Sanitary Pumping Station and Force Main Piping Systems, Town of Brookhaven, Town of Islip and Village of Islandia

At its September 21, 2016 meeting, the CEQ reviewed the above referenced matter. Pursuant to Chapter 450 of the Suffolk County Code, and based on the information received, as well as that given in a presentation by John Donovan, Chief Engineer, Suffolk County Department of Public Works, the Council advises the Suffolk County Legislature and County Executive, in CEQ Resolution No. 37-2016, a copy of which is attached, that the proposed project be considered an Unlisted Action under SEQRA that will not have significant adverse impacts on the environment.

If the Legislature concurs with the Council on Environmental Quality's recommendation that the project will not have a significant adverse impact on the environment, the Presiding Officer should cause to be brought before the Legislature for a vote, a resolution determining that the proposed action is an Unlisted Action pursuant to SEQRA that will not have significant adverse impacts on the environment (negative declaration). However, if the Legislature has further environmental concerns regarding this project and needs additional information, the Presiding Officer should remand the case back to the initiating unit for the necessary changes to the project and EAF or submit a resolution authorizing the initiating unit to prepare a draft environmental impact statement (positive declaration).

Enclosed for your information is a copy of CEQ Resolution No. 37-2016 which sets forth the Council’s recommendations. The project EAF and supporting documentation can be viewed online at http://www.suffolkcountyny.gov/Departments/Planning/Boards/CouncilonEnvironmentalQuality If the Council can be of further help in this matter, please let us know.

    Jason A. Richberg, Clerk of Legislature
    George Nolan, Attorney for the Legislature
    Sarah Lansdale, Director of Planning, Department of Economic Development and Planning
    Andrew Freleng, Chief Planner, Department of Economic Development and Planning
    Dennis Brown, Suffolk County Attorney
CEQ RESOLUTION NO. 37-2016, RECOMMENDATION CONCERNING A SEQRA CLASSIFICATION AND DETERMINATION FOR THE PURPOSES OF CHAPTER 450 OF THE SUFFOLK COUNTY CODE FOR THE PROPOSED RONKONKOMA HUB DEVELOPMENT SANITARY PUMPING STATION AND FORCE MAIN PIPING SYSTEM, TOWN OF BROOKHAVEN, TOWN OF ISLIP AND VILLAGE OF ISLANDIA

WHEREAS, at its September 21, 2016 meeting, the Suffolk County Council on Environmental Quality (CEQ) reviewed the EAF and associated information submitted by Suffolk County Department of Public Works; and

WHEREAS, a presentation regarding the project was given at the meeting by John Donovan, Chief Engineer, Suffolk County Department of Public Works; and

WHEREAS, the proposed project involves the construction of a sanitary pumping station and a seven mile long force main and gravity line piping system to convey the generated wastewater from the Ronkonkoma Hub Transit Oriented Development project to the Southwest Sewer District No. 3 and ultimately to the existing Bergen Point Sewage Treatment System; and

WHEREAS, the project is also being designed to allow for possible future connections to the proposed pumping station and force main piping system; now, therefore, be it

1st RESOLVED, that based on the information received and presented, a quorum of the CEQ hereby recommends to the Suffolk County Legislature and County Executive that the proposed activity be classified as an Unlisted Action under the provisions of Title 6 NYCRR Part 617 and Chapter 450 of the Suffolk County Code; and, be it further

2nd RESOLVED, that based on the information received, a quorum of the CEQ recommends to the Suffolk County Legislature and County Executive, pursuant to Title 6 NYCRR Part 617 and Chapter 450 of the Suffolk County Code, that the proposed project will not have significant adverse impacts on the environment for the following reasons:

1. The proposed action will not exceed any of the criteria set forth in Title 6 NYCRR Part 617.7 which sets forth thresholds for determining significant effect on the environment, as demonstrated in the Environmental Assessment Form;

2. As demonstrated in the Environmental Assessment Form, the proposed action does not appear to significantly threaten any unique or highly valuable environmental or cultural resources as identified in or regulated by the Environmental Conservation Law of the State of New York of the Suffolk County Charter and Code;

3. The Town of Brookhaven completed an Environmental Impact Statement for the Ronkonkoma Hub Transit Oriented Development project and on June 24, 2014 issued a Finding Statement which identified project mitigations as well as criteria under which future actions will be undertaken or approved including subsequent SEQRA compliance;
4. As demonstrated in the Environmental Assessment Form, there is sufficient capacity at the Bergen Point Sewage Treatment Plant for the increased wastewater that will result from the proposed project;

5. The construction of the proposed force main and gravity line will be limited to existing road right-of-ways;

6. To reduce disturbance the force main is proposed to be installed using a pipe jacking process instead of an open trench method where the road right-of-way crosses the Connetquot River Headwaters;

7. Road construction work will be conducted in accordance with New York State Department of Transportation's Maintenance and Protection of Traffic (MPT) requirements;

8. Vehicle access to all commercial entities, educational institutions, government offices and private residences will be provided for at all times during construction of the force main and gravity line piping systems;

9. The proposed force main is anticipated to be constructed at a rate of 200 feet per day limiting the duration of construction impacts to locations along the proposed route of the force main and gravity line piping system;

10. Roadway restoration will be done in accordance with the applicable town, county or state requirements;

11. All necessary project permits/approvals will be obtained from the applicable state, county and local regulatory agencies;

12. Any future connections to the proposed sewer piping system will require approval from the Suffolk County Sewer Agency;

3rd RESOLVED, that it is the recommendation of the Council that the Legislature and County Executive adopt a SEQRA determination of non-significance (negative declaration).

RE: CEQ Review of the Proposed LT Michael P. Murphy Navy Seal Museum at Suffolk County’s West Sayville Golf Course Property, Town of Islip

At its September 21, 2016 meeting, the CEQ reviewed the above referenced matter. Pursuant to Chapter 450 of the Suffolk County Code, and based on the information received, as well as that given in a presentation by Richard Martin, Director of Historic Services, Suffolk County Department of Parks, Recreation and Conservation, Dan Murphy, Father of LT Michael Murphy and Paul Dobiecki, Architect for the Navy Seal Museum, the Council advises the Suffolk County Legislature and County Executive, in CEQ Resolution No. 38-2016, a copy of which is attached, that the proposed project be considered a Type I Action under SEQRA that will not have significant adverse impacts on the environment.

If the Legislature concurs with the Council on Environmental Quality’s recommendation that the project will not have a significant adverse impact on the environment, the Presiding Officer should cause to be brought before the Legislature for a vote, a resolution determining that the proposed action is a Type I Action pursuant to SEQRA that will not have significant adverse impacts on the environment (negative declaration). However, if the Legislature has further environmental concerns regarding this project and needs additional information, the Presiding Officer should remand the case back to the initiating unit for the necessary changes to the project and EAF or submit a resolution authorizing the initiating unit to prepare a draft environmental impact statement (positive declaration).

CEQ RESOLUTION NO. 38-2016, RECOMMENDATION CONCERNING A SEQUA CLASSIFICATION AND DETERMINATION FOR THE PURPOSES OF CHAPTER 450 OF THE SUFFOLK COUNTY CODE FOR THE PROPOSED LT MICHAEL P. MURPHY NAVY SEAL MUSEUM AT SUFFOLK COUNTY’S WEST SAYVILLE GOLF COURSE PROPERTY, TOWN OF ISLIP

WHEREAS, at its September 21, 2016 meeting, the Suffolk County Council on Environmental Quality (CEQ) reviewed the EAF and associated information submitted by the Suffolk County Department of Parks, Recreation and Conservation; and

WHEREAS, a presentation regarding the project was given at the meeting by Richard Martin, Director of Historic Services, Suffolk County Department of Parks, Recreation and Conservation, Dan Murphy, Father of LT Michael Murphy and Paul Dobiecki, Architect for the Navy Seal Museum; and

WHEREAS, the project involves construction of a new one story 10,500 square foot structure and a connected 70 foot tall tower to be located in a cleared area of the pinetum (pine tree area) at Suffolk County’s West Sayville Golf Course Property; and

WHEREAS, the proposed structure will be used for a Navy Seal Museum as well as for a Navy Sea Cadet Corps Training Facility; and

WHEREAS, the proposed project also includes a new egress driveway to West Avenue, a new walkway with display areas and new vegetative plantings; now, therefore, be it

1st RESOLVED, that based on the information received and presented, a quorum of the CEQ hereby recommends to the Suffolk County Legislature and County Executive that the proposed activity be classified as a Type I Action under the provisions of Title 6 NYCRR Part 617 and Chapter 450 of the Suffolk County Code; and, be it further

2nd RESOLVED, that based on the information received, a quorum of the CEQ recommends to the Suffolk County Legislature and County Executive, pursuant to Title 6 NYCRR Part 617 and Chapter 450 of the Suffolk County Code, that the proposed project will not have significant adverse impacts on the environment for the following reasons:

1. The proposed action will not exceed any of the criteria in Section 617.7 of Title 6 NYCRR which sets forth thresholds for determining significant effect on the environment;

2. The proposal does not appear to significantly threaten any unique or highly valuable environmental or cultural resources as identified in or regulated by the Environmental Conservation Law of the State of New York or the Suffolk County Charter and Code;

3. No ancillary equipment will be placed on the proposed museum tower;

4. The proposed action is compatible with the site’s historic character and consistent with the 2002 Conceptual Site Plan for the Long Island Maritime Museum;
and, be it further

3rd RESOLVED, that it is the recommendation of the Council that the Legislature and County Executive adopt a SEQRA determination of non-significance (negative declaration).

DATE: September 21, 2016

RE: Suffolk County Historic Trust Approval of the Proposed LT Michael P. Murphy Navy Seal Museum at Suffolk County’s West Sayville Golf Course Property, Town of Islip

At its September 21, 2016 meeting, the CEQ reviewed the above referenced matter. Pursuant to Article I of the Suffolk County Charter, and based on the information received, as well as that given in a presentation by Mr. Martin, Director of Historic Services, Suffolk County Department Parks, Recreation and Conservation, Dan Murphy, Father of LT Michael Murphy and Paul Dobieciki, Architect for the Navy Seal Museum, the CEQ, as members of the Suffolk County Historic Trust, approves the proposed LT Michael P. Murphy Navy Seal Museum at Suffolk County’s West Sayville Golf Course Property.

Enclosed for your information is a copy of the CEQ Resolution No. 39-2016 which sets forth the council’s recommendations. The project documentation can be viewed online at http://www.suffolkcountyny.gov/Departments/Planning/Boards/CouncilonEnvironmentalQuality

If the council can be of further help in this matter, please let us know.

   Dennis Brown, Suffolk County Attorney
CEQ RESOLUTION NO. 39-2016, RECOMMENATION BY THE HISTORIC TRUST TO APPROVE THE PROPOSED LT MICHAEL P. MURPHY NAVY SEAL MUSEUM AT SUFFOLK COUNTY'S WEST SAYVILLE GOLF COURSE PROPERTY, TOWN OF ISLIP

WHEREAS, Suffolk County Resolution No. 871-1972 establishes the Suffolk County Historic Trust whose membership shall consist of the voting members of the Suffolk County Council on Environmental Quality (CEQ); and

WHEREAS, the West Sayville Golf Course was dedicated to the Suffolk County Historic Trust by Legislative Resolution 534-1987; and

WHEREAS, at its September 21, 2016 meeting, the Suffolk County Council on Environmental Quality (CEQ) reviewed the Proposed LT Michael P. Murphy Navy Seal Museum and associated information submitted by the Suffolk County Department of Parks, Recreation and Conservation; and

WHEREAS, a presentation regarding the project was given at the meeting by Richard Martin, Director of Historic Services, Suffolk County Department of Parks, Recreation and Conservation, Dan Murphy, Father of LT Michael Murphy and Paul Dobiecki, Architect for the Navy Seal Museum; and

WHEREAS, the project involves construction of a new one story 10,500 square foot structure and a connected 70 foot tall tower to be located in a cleared area of the pinetum (pine tree area) at Suffolk County's West Sayville Golf Course Property; and

WHEREAS, the proposed structure will be used for a Navy Seal Museum as well as for a Navy Sea Cadet Corps Training Facility; and

WHEREAS, the proposed project also includes a new egress driveway to West Avenue, a new walkway with display areas and new vegetative plantings; now, therefore, be it

1st RESOLVED, that the CEQ, as the Suffolk County Historic Trust, approves the LT Michael Murphy Navy Seal Museum with the following provision:

1. The applicant will continue to work with the Suffolk County Parks Department and the Suffolk County Historic Trust Committee on new landscaping and on the final design of the museum building.

**Recommendation:** Approval of the LT Michael P. Murphy Navy Seal Museum

**Motion:** Mr. Kaufman  
**Second:** Leg. Hahn

Further information may be obtained by contacting:  
Andrew P. Freleng, Chief Planner  
Council on Environmental Quality  
P.O. Box 6100  
Hauppauge, New York 11788  
Tel: (631) 853-5191
At its September 21, 2016 meeting, the CEQ reviewed the above referenced matter. Pursuant to Chapter 450 of the Suffolk County Code, and based on the information received, as well as that given in a presentation by Kenneth Zegel, Associate Public Health Engineer, Suffolk County Department of Health Services, the Council advises the Suffolk County Legislature and County Executive, in CEQ Resolution No. 40-2016, a copy of which is attached, that the proposed project be considered a Type I Action under SEQRA that may have a significant impact on the environment as identified within SEQRA. A Draft Generic Environmental Impact Statement (DGEIS) should be prepared because the action will exceed the criteria set forth in Title 6 NYCRR Part 617.7(c)(1)(vii)(viii)(ix).

Enclosed for your information is a copy of CEQ Resolution No. 40-2016 which sets forth the Council's recommendations. The project EAF and supporting documentation can be viewed online at http://www.suffolkcountyny.gov/Departments/Planning/Boards/CouncilonEnvironmentalQuality

If the Council can be of further help in this matter, please let us know.

    George Nolan, Attorney for the Legislature
    Sarah Lansdale, Director of Planning
    Andrew Freleng, Chief Planner, Department of Economic Development and Planning
    Dennis Brown, Suffolk County Attorney
CEQ RESOLUTION NO. 40-2016, RECOMMENDATION CONCERNING A
SEQRA CLASSIFICATION AND DETERMINATION FOR THE PURPOSES OF
CHAPTER 450 OF THE SUFFOLK COUNTY CODE FOR THE PROPOSED
SUFFOLK COUNTY WASTEWATER MANAGEMENT PROGRAM FOR THE
MITIGATION OF NITROGEN IMPACTS FROM THE WASTEWATER
SOURCES

WHEREAS, at its September 21, 2016 meeting, the Suffolk County Council on
Environmental Quality (CEQ) reviewed the EAF and associated information submitted by the
Suffolk County Department of Health Services; and

WHEREAS, a presentation regarding the project was given at the meeting by Kenneth
Zegel, Associate Public Health Engineer, Suffolk County Department of Health Services; and

WHEREAS, the proposed action is for the approval and implementation of a County­
wide wastewater program to mitigate nitrogen impacts emanating from wastewater sources;
now, therefore, be it

1st RESOLVED, that based on the information received and presented, a quorum of the
CEQ hereby recommends to the Suffolk County Legislature and County Executive that the
proposed activity be classified as a Type I Action under the provisions of Title 6 NYCRR Part
617 and Chapter 450 of the Suffolk County Code; and, be it further

2nd RESOLVED, that based on the information received and presented, a quorum of the
Council recommends to the Suffolk County Legislature and County Executive, pursuant to
Chapter 279 of the Suffolk County Code, that the implementation of this action, may have a
significant impact on the environment as identified within SEQRA, because it will exceed criteria
in Title 6 NYCRR Part 617.7(c)(1)(vii)(viii)(ix); and, be it further

3rd RESOLVED, that the CEQ recommends to the Suffolk County Legislature and
County Executive that a DGEIS be prepared to analyze all of the short term, long term and
cumulative negative effects on the environment that will result from the proposed action; and, be
it further

4th RESOLVED, that the CEQ shall coordinate a scoping hearing to solicit comments
from the public in order to focus the DGEIS on potentially significant impacts relevant to the
community.

RE:
CEQ Review of the Proposed Little Creek Stormwater Mitigation Project, Village of Patchogue

At its September 21, 2016 meeting, the CEQ reviewed the above referenced matter. Pursuant to Chapter 450 of the Suffolk County Code, and based on the information received, as well as that given in a presentation by representatives from the Suffolk County Department of Economic Development and Planning, the Council advises the Suffolk County Legislature and County Executive, in CEQ Resolution No. 41-2016, a copy of which is attached, that the proposed project be considered an Unlisted Action under SEQRA that will not have significant adverse impacts on the environment.

If the Legislature concurs with the Council on Environmental Quality's recommendation that the project will not have a significant adverse impact on the environment, the Presiding Officer should cause to be brought before the Legislature for a vote, a resolution determining that the proposed action is an Unlisted Action pursuant to SEQRA that will not have significant adverse impacts on the environment (negative declaration). However, if the Legislature has further environmental concerns regarding this project and needs additional information, the Presiding Officer should remand the case back to the initiating unit for the necessary changes to the project and EAF or submit a resolution authorizing the initiating unit to prepare a draft environmental impact statement (positive declaration).

Enclosed for your information is a copy of CEQ Resolution No. 41-2016 which sets forth the Council's recommendations. The project EAF and supporting documentation can be viewed online at http://www.suffolkcountyny.gov/Departments/Planning/Boards/CouncilonEnvironmentalQuality.

CEQ RESOLUTION NO. 41-2016, RECOMMENDATION CONCERNING A SEQRA CLASSIFICATION AND DETERMINATION FOR THE PURPOSES OF CHAPTER 450 OF THE SUFFOLK COUNTY CODE FOR THE PROPOSED LITTLE CREEK STORMWATER MITIGATION PROJECT, VILLAGE OF PATCHOGUE

WHEREAS, at its September 21, 2016 meeting, the Suffolk County Council on Environmental Quality (CEQ) reviewed the EAF and associated information submitted by the Suffolk County Department of Economic Development and Planning; and

WHEREAS, a presentation regarding the project was given at the meeting by Frank Castelli, Environmental Projects Coordinator, Suffolk County Department of Economic Development and Planning and Joseph Dean, Superintendent of Public Works, Village of Patchogue; and

WHEREAS, the proposed project involves the reconstruction of the drainage system at the south end of Little Creek to improve drainage capacity; and

WHEREAS, this reconstruction involves the removal and replacement of a check valve vault and three 30' inch pipes with three new pipes to be anchored to the bay bottom; and

WHEREAS, to facilitate collection and removal of debris a new headwall is also proposed to be constructed approximately 50 feet to the north of the bulkhead; now, therefore, be it

1st RESOLVED, that based on the information received and presented, a quorum of the CEQ hereby recommends to the Suffolk County Legislature and County Executive that the proposed stormwater mitigation project be classified as an Unlisted Action under the provisions of Title 6 NYCRR Part 617 and Chapter 450 of the Suffolk County Code; and, be it further

2nd RESOLVED, that based on the information received, a quorum of the CEQ recommends to the Suffolk County Legislature and County Executive, pursuant to Title 6 NYCRR Part 617 and Chapter 450 of the Suffolk County Code, that the proposed action will not have significant adverse impacts on the environment for the following reasons:

1. the proposed action will not exceed any of the criteria set forth in Title 6 NYCRR Part 617.7 which sets forth thresholds for determining significant adverse impacts on the environment, as demonstrated in the Environmental Assessment Form;

2. the proposed action does not significantly threaten any unique or highly valuable environmental or cultural resources as identified in or regulated by the Environmental Conservation Law of the State of New York of the Suffolk County Charter and Code;

3. all necessary permits/approvals will be obtained from all applicable state, county, town and village regulatory agencies prior to the commencement of project construction;
4. the proposed project will improve drainage capacity at the south end of Little Creek and help reduce the potential for flooding and septic system failures adjacent to the Creek which will improve the water quality of Little Creek, Patchogue Bay and the Great South Bay;

and, be it further

3rd RESOLVED, that it is the recommendation of the Council that the Legislature and County Executive adopt a SEQRA determination of non-significance (negative declaration).

RE: CEQ Review of the Proposed Lake Agawam Stormwater Remediation Phase IV Project, Village of Southampton

At its September 21, 2016 meeting, the CEQ reviewed the above referenced matter. Pursuant to Chapter 450 of the Suffolk County Code, and based on the information received, as well as that given in a presentation by representatives from the Suffolk County Department of Economic Development and Planning, the Council advises the Suffolk County Legislature and County Executive, in CEQ Resolution No. 43-2016, a copy of which is attached, that the proposed project be considered an Unlisted Action under SEQRA that will not have significant adverse impacts on the environment.

If the Legislature concurs with the Council on Environmental Quality's recommendation that the project will not have a significant adverse impact on the environment, the Presiding Officer should cause to be brought before the Legislature for a vote, a resolution determining that the proposed action is an Unlisted Action pursuant to SEQRA that will not have significant adverse impacts on the environment (negative declaration). However, if the Legislature has further environmental concerns regarding this project and needs additional information, the Presiding Officer should remand the case back to the initiating unit for the necessary changes to the project and EAF or submit a resolution authorizing the initiating unit to prepare a draft environmental impact statement (positive declaration).

Enclosed for your information is a copy of CEQ Resolution No. 43-2016 which sets forth the Council's recommendations. The project EAF and supporting documentation can be viewed online at http://www.suffolkcountyny.gov/Departments/Planning/Boards/CouncilonEnvironmentalQuality.

    George Nolan, Attorney for the Legislature
    Sarah Lansdale, Director of Planning, Department of Economic Development and Planning
    Andrew Freleng, Chief Planner, Department of Economic Development and Planning
    Dennis Brown, Suffolk County Attorney
WHEREAS, at its September 21, 2016 meeting, the Suffolk County Council on Environmental Quality (CEQ) reviewed the EAF and associated information submitted by the Suffolk County Department of Economic Development and Planning; and

WHEREAS, a presentation regarding the project was given at the meeting by Frank Castelli, Environmental Projects Coordinator, Suffolk County Department of Economic Development and Planning, and Lara Urbat with Nelson Pope & Voorhis; and

WHEREAS, the proposed project involves the installation of a series of leaching pools along Culver Street and Ox Pasture Road in the Village of Southampton to reduce stormwater runoff to Lake Agawam; and

WHEREAS, the drainage systems are proposed to be installed within the road right-of-ways and would not result in a change to impervious cover; now, therefore, be it

1st RESOLVED, that based on the information received and presented, a quorum of the CEQ hereby recommends to the Suffolk County Legislature and County Executive that the proposed stormwater mitigation project be classified as an Unlisted Action under the provisions of Title 6 NYCRR Part 617 and Chapter 450 of the Suffolk County Code; and, be it further

2nd RESOLVED, that based on the information received, a quorum of the CEQ recommends to the Suffolk County Legislature and County Executive, pursuant to Title 6 NYCRR Part 617 and Chapter 450 of the Suffolk County Code, that the proposed action will not have significant adverse impacts on the environment for the following reasons:

1. the proposed action will not exceed any of the criteria set forth in Title 6 NYCRR Part 617.7, which sets forth thresholds for determining significant adverse impacts on the environment, as demonstrated in the Environmental Assessment Form;

2. the proposed action does not significantly threaten any unique or highly valuable environmental or cultural resources as identified in or regulated by the Environmental Conservation Law of the State of New York or the Suffolk County Charter and Code;

3. all necessary permits/approvals will be obtained from all applicable state, county, town and village regulatory agencies prior to the commencement of project construction;

4. the proposed action will improve stormwater management for Ox Pasture Road and Culver Street which will improve the water quality of Lake Agawam by reducing road runoff to the Lake;
5. the drainage systems are proposed to be installed within the Village road right-of-ways and will not result in a change to impervious cover; and, be it further

3rd RESOLVED, that it is the recommendation of the Council that the Legislature and County Executive adopt a SEQRA determination of non-significance (negative declaration).

MEMORANDUM

TO: Honorable Steven Bellone, Suffolk County Executive
Honorable DuWayne Gregory, Presiding Officer

FROM: Gloria Russo, Chairperson

DATE: September 30, 2016

RE: CEQ Review of the Proposed Meadow Road Stormwater Management Project, Town of Smithtown

At its September 21, 2016 meeting, the CEQ reviewed the above referenced matter. Pursuant to Chapter 450 of the Suffolk County Code, and based on the information received, as well as that given in a presentation by representatives from the Suffolk County Department of Economic Development and Planning, the Council advises the Suffolk County Legislature and County Executive, in CEQ Resolution No. 44-2016, a copy of which is attached, that the proposed project be considered an Unlisted Action under SEQRA that will not have significant adverse impacts on the environment.

If the Legislature concurs with the Council on Environmental Quality's recommendation that the project will not have a significant adverse impact on the environment, the Presiding Officer should cause to be brought before the Legislature for a vote, a resolution determining that the proposed action is an Unlisted Action pursuant to SEQRA that will not have significant adverse impacts on the environment (negative declaration). However, if the Legislature has further environmental concerns regarding this project and needs additional information, the Presiding Officer should remand the case back to the initiating unit for the necessary changes to the project and EAF or submit a resolution authorizing the initiating unit to prepare a draft environmental impact statement (positive declaration).

Enclosed for your information is a copy of CEQ Resolution No. 44-2016 which sets forth the Council’s recommendations. The project EAF and supporting documentation can be viewed online at http://www.suffolkcountyny.gov/Departments/Planning/Boards/CouncilonEnvironmentalQuality.

CEQ RESOLUTION NO. 44-2016, RECOMMENDATION CONCERNING A SEQRA CLASSIFICATION AND DETERMINATION FOR THE PURPOSES OF CHAPTER 450 OF THE SUFFOLK COUNTY CODE FOR THE PROPOSED MEADOW ROAD STORMWATER MANAGEMENT PROJECT, TOWN OF SMITHTOWN

WHEREAS, at its September 21, 2016 meeting, the Suffolk County Council on Environmental Quality (CEQ) reviewed the EAF and associated information submitted by the Suffolk County Department of Economic Development and Planning; and

WHEREAS, a presentation regarding the project was given at the meeting by Frank Castelli, Environmental Projects Coordinator, Suffolk County Department of Economic Development and Planning and Allyson Murray, Environmental Planner, Town of Smithtown; and

WHEREAS, the proposed project involves the construction of a bio-swale along Meadow Road to facilitate stormwater management of inputs to Mill Pond, the Nissequogue River and the Long Island Sound; now, therefore, be it

1st RESOLVED, that based on the information received and presented, a quorum of the CEQ hereby recommends to the Suffolk County Legislature and County Executive that the proposed stormwater mitigation project be classified as an Unlisted Action under the provisions of Title 6 NYCRR Part 617 and Chapter 450 of the Suffolk County Code; and, be it further

2nd RESOLVED, that based on the information received, a quorum of the CEQ recommends to the Suffolk County Legislature and County Executive, pursuant to Title 6 NYCRR Part 617 and Chapter 450 of the Suffolk County Code, that the proposed action will not have significant adverse impacts on the environment for the following reasons:

1. the proposed action will not exceed any of the criteria set forth in Title 6 NYCRR Part 617.7 which sets forth thresholds for determining significant effect on the environment, as demonstrated in the Environmental Assessment Form;

2. the proposed action does not appear to significantly threaten any unique or highly valuable environmental or cultural resources as identified in or regulated by the Environmental Conservation Law of the State of New York of the Suffolk County Charter and Code;

3. all necessary permits/approvals will be obtained from all applicable state, county and town regulatory agencies prior to the commencement of project construction;

4. the proposed project will improve drainage along Meadow Road to facilitate stormwater management and improve water quality in Mill Pond, the Nissequogue River and the Long Island Sound; and, be it further

3rd RESOLVED, that it is the recommendation of the Council that the Legislature and County Executive adopt a SEQRA determination of non-significance (negative declaration).

MEMORANDUM

TO: Honorable Steven Bellone, Suffolk County Executive
Honorable DuWayne Gregory, Presiding Officer

FROM: Gloria Russo, Chairperson

DATE: September 30, 2016

RE: Proposed Acquisition of Land Under the New Suffolk County Drinking Water Protection Program – Open Space Component – North Fork Preserve Addition – for the Alan S. Gorman, DDS, PC 401K Plan Property, Town of Riverhead

At its September 21, 2016 meeting, the CEQ reviewed the above referenced matter. Pursuant to Chapter 450 of the Suffolk County Code, and based on the information received, as well as that given in a presentation by Lauretta Fischer, Chief Environmental Analyst with the Suffolk County Department of Economic Development and Planning, the Council advises the Suffolk County Legislature and County Executive, in CEQ Resolution No. 45-2016, a copy of which is attached, that the proposed project be considered an Unlisted Action under SEQRA that will not have significant adverse impacts on the environment.

If the Legislature concurs with the Council on Environmental Quality’s recommendation that the project will not have a significant adverse impact on the environment, the Presiding Officer should cause to be brought before the Legislature for a vote, a resolution determining that the proposed action is an Unlisted Action pursuant to SEQRA that will not have significant adverse impacts on the environment (negative declaration). However, if the Legislature has further environmental concerns regarding this project and needs additional information, the Presiding Officer should remand the case back to the initiating unit for the necessary changes to the project and EAF or submit a resolution authorizing the initiating unit to prepare a draft environmental impact statement (positive declaration).

Enclosed for your information is a copy of CEQ Resolution No. 45-2016 which sets forth the Council’s recommendations. The project EAF and supporting documentation can be viewed online at http://www.suffolkcountyny.gov/Departments/Planning/Boards/CouncilonEnvironmentalQuality.

Jason A. Richberg, Clerk of Legislature
George Nolan, Attorney for the Legislature
Sarah Lansdale, Director of Planning, Department of Economic Development and Planning
Andrew Freleng, Chief Planner, Department of Economic Development and Planning
Dennis Brown, Suffolk County Attorney

WHEREAS, at its September 21, 2016 meeting, the Suffolk County Council on Environmental Quality (CEQ) reviewed the EAF and associated information submitted by the Suffolk County Department of Economic Development and Planning; and

WHEREAS, a presentation regarding the project was given at the meeting by Lauretta Fischer, Chief Environmental Analyst, with the Suffolk County Department of Economic Development and Planning; and

WHEREAS, the project involves the acquisition of 5.591± acres of land by Suffolk County under the New Suffolk County Drinking Water Protection Program and its dedication to the Suffolk County Parks Department in order to assure it remain in open space for passive recreational use; now, therefore, be it

1st RESOLVED, that based on the information received and presented, a quorum of the CEQ hereby recommends to the Suffolk County Legislature and County Executive that the proposed activity be classified as an Unlisted Action under the provisions of Title 6 NYCRR Part 617 and Chapter 450 of the Suffolk County Code; and, be it further

2nd RESOLVED, that based on the information received, a quorum of the CEQ recommends to the Suffolk County Legislature and County Executive, pursuant to Title 6 NYCRR Part 617 and Chapter 450 of the Suffolk County Code, that the proposed project will not have significant adverse impacts on the environment for the following reasons:

1. The proposed action will not exceed any of the criteria of 6 NYCRR, Section 617.7, which sets forth thresholds for determining significant effect on the environment, as demonstrated in the Environmental Assessment Form;

2. The proposed use of the subject parcel(s) is passive parks;

3. If not acquired, the property will most likely be developed for residential purposes; incurring far greater environmental impact than the proposed acquisition and preservation of the site would have;

and, be it further

3rd RESOLVED, that it is the recommendation of the Council that the Legislature and County Executive adopt a SEQRA determination of non-significance (negative declaration).

MEMORANDUM

TO: Honorable Steven Bellone, Suffolk County Executive
Honorable DuWayne Gregory, Presiding Officer

FROM: Gloria Russo, Chairperson

DATE: September 30, 2016

RE: CEQ Review of the Recommended SEQRA Classifications of Legislative Resolutions Laid on the Table September 7, 2016

At its September 21, 2016 meeting, the CEQ reviewed the above referenced matter. Pursuant to Chapter 450 of the Suffolk County Code, and based on the information received, the Council recommends to the Suffolk County Legislature and County Executive in CEQ Resolution No. 46-2016, a copy of which is attached, that the enclosed list of legislative resolutions laid on the table September 7, 2016, be classified pursuant to SEQRA as so indicated in the left hand margin. The majority of the proposed resolutions are Type II actions pursuant to the appropriate section of Title 6 NYCRR Part 617.5, with no further environmental review necessary. Unlisted and Type I actions require that the initiating unit of County government prepare an Environmental Assessment Form (EAF) or other SEQRA documentation and submit it to the CEQ for further SEQRA review and recommendations.

Enclosed for your information is a copy of CEQ Resolution No. 46-2016 setting forth the Council’s recommendations along with the associated lists of legislative resolutions. If the Council can be of further help in this matter, please let us know.

CEQ RESOLUTION NO. 46-2016, RECOMMENDATION CONCERNING
SEQRA CLASSIFICATIONS OF LEGISLATIVE RESOLUTIONS LAID ON THE
TABLE SEPTEMBER 7, 2016 PURSUANT TO CHAPTER 450 OF THE
SUFFOLK COUNTY CODE

WHEREAS, the legislative packets regarding resolutions laid on the table on September
7, 2016 have been received in the CEQ office; and

WHEREAS, staff has preliminarily reviewed the proposed resolutions and recommended
SEQRA classifications; now, therefore, be it

1st RESOLVED, that in the judgment of the CEQ, based on the information received and
presented, a quorum of the Council recommends to the Suffolk County Legislature and County
Executive, pursuant to Chapter 450 of the Suffolk County Code, that the attached list of actions
and projects be classified by the Legislature and County Executive pursuant to SEQRA as so
indicated.
